

This archive contains the presentation slides and the demos for the technical workshop titled “**ArcGIS Network Analyst – Automating Workflows with Geoprocessing**” presented during the 2013 Esri International User Conference.

The “Demos” folder contains a DemoScript.pdf which contains the notes used by the presenters to run through the demos. While most of the data used in the demos is included, in order to use the demos on your own computer, you will have to specify your own network dataset. You can use the same free network dataset used in the demos by copying the “streetmap\_na” folder from your Esri Data and Maps DVD in a folder called “NetworkData” at the same level where you extract the contents from this archive.
