

Create Fast Searches for Your Applications

David Haines, Boulder County Land Use

“Can you make it work like Google?”

Search Design Rules

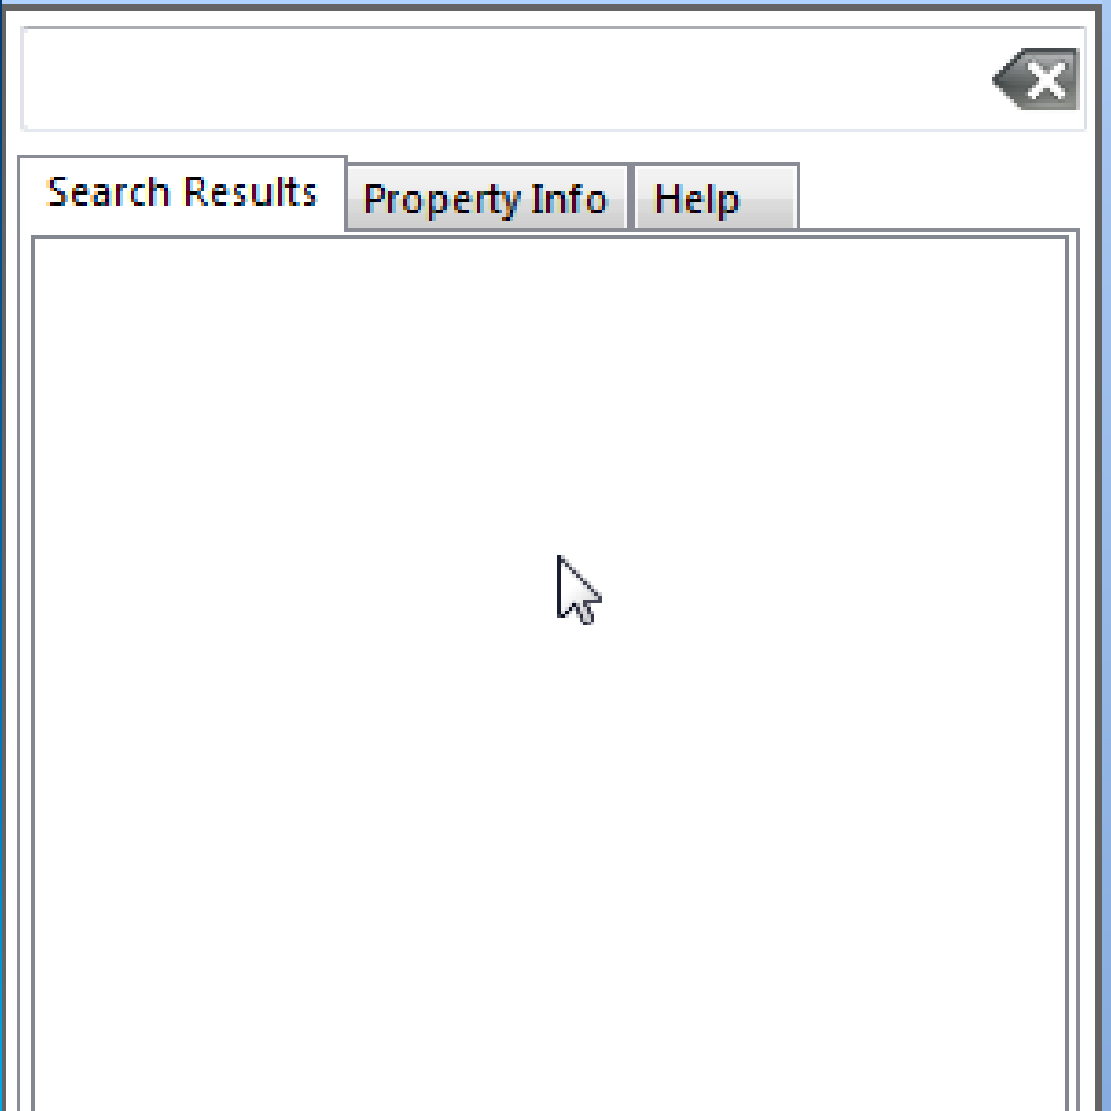

#1. Auto-complete

#2. One search field

#3. Without at least one of the above people will (or try to) use something else.

#4. Good results

Search Demo

**Wasn't Always
this Way**

Old Search Tool

The screenshot shows a window titled "Search BoCo" with a close button (X) in the top right corner. Below the title bar, there are two tabs: "Mining" and "GNIS". Under the "GNIS" tab, there are several sub-tabs: "Address", "Map", "Accela", "Owner", "Parcel", "Layers", and "Subdivision". The "Address" sub-tab is selected. Below the sub-tabs, there are two input fields: "Number" and "Street". The "Address" label is positioned to the left of the "Number" field. Below these fields, there is a label "First 100" and a large grid area for search results.
