

Collector for ArcGIS

Paul Barker

Bert Yagrish

Agenda

What are we going to cover today?

- **ArcGIS as a platform for data collection**
- **Device strategy and field data collection**
- **Collector for ArcGIS an overview**
- **Working offline**
- **Demo**
- **Working with relationships**
- **Demo**
- **Tips and tricks**
- **What's next?**

Web GIS Extends GIS Across Organizations

Throughout Communities

Web GIS Extends GIS Across Organizations

Throughout Communities

Providing Mapping, Analysis, Data
Management, and Collaboration

*Available on the Open Web . . .
. . . and On-Premises*

Device Strategy

Get the device that makes sense for your work

- Identify the level of ruggedness required
- Hardware requirements
- Decide on the size
- Software requirements
 - Off the shelf, custom, etc.
- Do you have IT restrictions
- Choose a platform
- Do a pilot project before scaling up
- Cheap is tempting but not always the right choice

Collector for ArcGIS an Overview

What is the problem we are trying to solve

Organizations need a easy way to build or maintain a GIS of authoritative data

- **Some of that data is collected from scratch in the field**
- **Some of that data comes from other sources (surveying, photogrammetry, digitizing)**
 - **That data needs to be validated by ground truthing**
- **Some of that data may already exist and simply needs to be assessed and updated**
 - **Condition of assets**
- **In the “past” this was done with notebooks, clipboards, and maps**
 - **Can be error prone, and slow down the turn around time to make that data accessible and useful to your organization**

Collector for ArcGIS an Overview

What can Collector for ArcGIS do ?

- **Collect and update data**
 - Using your location or the map
 - Fill out forms
 - Capture media (pictures, videos)
 - Additional tools to help your field workforce (measure, search, basemaps, directions)
- **Types of use**
 - Collect and inspect assets
 - Ground-truth their GIS data
 - Make observations/conduct surveys
 - Replace paper-based forms/process
 - Spatial awareness in the field

Collector for ArcGIS an Overview

How can I make a map for collector?

- **Offline layers needs to have sync enabled**
- **Tips: leverage domains, subtypes, default values, scale ranges etc.**
- **Choose symbology for the end user (sunlight)**

Collector for ArcGIS an Overview

How can I make a map for collector?

- **Only show the fields in the form that the end user needs**
- **Turn off tools the user won't use to do their job (measure, basemap etc)**
- **Use scale dependency to hide read only layers till they're needed**
- **Side load basemaps to device to save time**

Working with offline

Can you hear me now ?

Offline is a great way to work in areas of no connectivity

- **Requires**
 - A sync enabled feature service either hosted in AGO or from your own server (10.3.1 recommended)
 - Tiled map service (basemap) with export tiles enabled or a previously created/side loaded TPK
- **Sync frequently when you have access to a stable connection**
 - Reduces the risk of timeouts
 - Attachments can add up and cause sync to take awhile
- **If you are using server and seeing failed syncs check the server debug logs for more information**
- **Increase the IIS uploadReadAheadSize for your server (~20mb)**

Working with offline

Can you hear me now ?

- **Avoid ownership based access (this is not supported at this time in offline)**
- **Recovery tool in desktop: *Copy Runtime Geodatabase To File Geodatabase***
 - **This is not a substitute for sync, it is intended for recovery scenarios (deleted service)**
 - **Make sure to copy the entire offline map folder to your computer (use itunes for apple devices, android just plug in)**

Offline Demo

Working with relationships

Did someone say inspections?

- Relationships are incredibly powerful for collecting information in the field
- Collector workflow is inspection oriented
- Requires ArcGIS Sever 10.3 or higher or AGO hosted services
 - If you are using server and archiving install <http://support.esri.com/en/downloads/patches-servicepacks/view/productid/66/metaid/2196>
- We support both feature and table based relationships
 - One to Many and One to One
 - The feature service supports three relationship levels deep
 - Collection of a new related record has to start with a feature, it cannot start directly from a table

Working with relationships

Did someone say inspections?

- By default children features are not shown in the collect tool, to avoid orphaned records.
 - Advanced setting in Settings can override that for specific workflows
- Recent update of ArcGIS Online fixed a number of sync issues related to related records
- Strongly recommend using GUID based relationships
 - With user maintained relationships, records can be orphaned
- We do not support attributes fields directly on the relationship class

The screenshot displays a mobile application interface for inspections. The main screen shows a form titled "Inspected February 18, 2015" with the following fields:

- Pressure (PSI): 45.00
- Facility ID: 39788
- Inspector: Jeff Shaner
- Chains Req'd?: No
- Paint Req'd?: Yes
- Marker Req'd?: No
- Lubrication Req'd?: No
- Stamped?: No
- Greased?: No
- Drain?: No
- NOTES:
- Inspection Date: February 18, 2015

A context menu is overlaid on the right side of the screen, showing the following options:

- Inspection Date: February 18, 2015
- Violations
- View
- New

Tips and Tricks

Avoiding pot holes along the way

- **Maps in collector need an editable layer and to be shared through a group to show up in collector**
- **Do not use the same layer twice in a map if you intend to use it offline**
- **Definition filters are not supported offline**
- **Test your symbology outside before sending people to the field**
- **If you are using portal the format is `https://<SERVERNAME>/INSTANCE`**
 - E.g. <https://amazingportal.esri.com/arcgis>

What's next?

Filling in the missing features

- **Collector for ArcGIS on Windows!**
- **More tools for planning field work (pre-planned)**
 - Prepare your data in advance
 - Pre package multiple areas
 - Skip attachment downloads
- **High accuracy collection**
- **Smarter data collection forms**
 - Auto field population
 - Inherited attributes
- **More templates**
