

Conducting a Target Hazard Analysis for Your Community

Walter Potts

What is the Target Hazard Analysis Solution

- Target Hazards are properties identified as hazards according to a user-defined criteria
 - Occupancy Type
 - Life Safety (ability to self-evacuate)
 - Building area or height
 - Economic impact
- Structured methodology to weight criteria and rank hazard rating:
 - Spreadsheet with criteria and criticality values for each criteria
 - Tools to calculate the total hazard score based on a weighted scoring model
- Identifying hazardous properties is the first step in defining community risk
 - Prioritize pre-incident planning
 - Determine effective response force
