SARAYAKU: IN DEFENSE OF TERRITORY

Over the past fifty years, oil production has drastically increased in order to meet the world's growing demand for oil. At the intersection between incessant demand and exploitation processes that entail serious socio-environmental harm lies western Amazonia, one of the world's primary petroleum sources. This region, considered one of the lungs of the planet and home to hundreds of indigenous communities, is at risk of suffering irreversible damage.

Among the communities that inhabit the Ecuadorian Amazon are the Kichwa de Sarayaku people. This community has struggled for decades against illegal incursions, defending their territory, way of life and environment. Above all, the Sarayaku people defend **the living forest**.

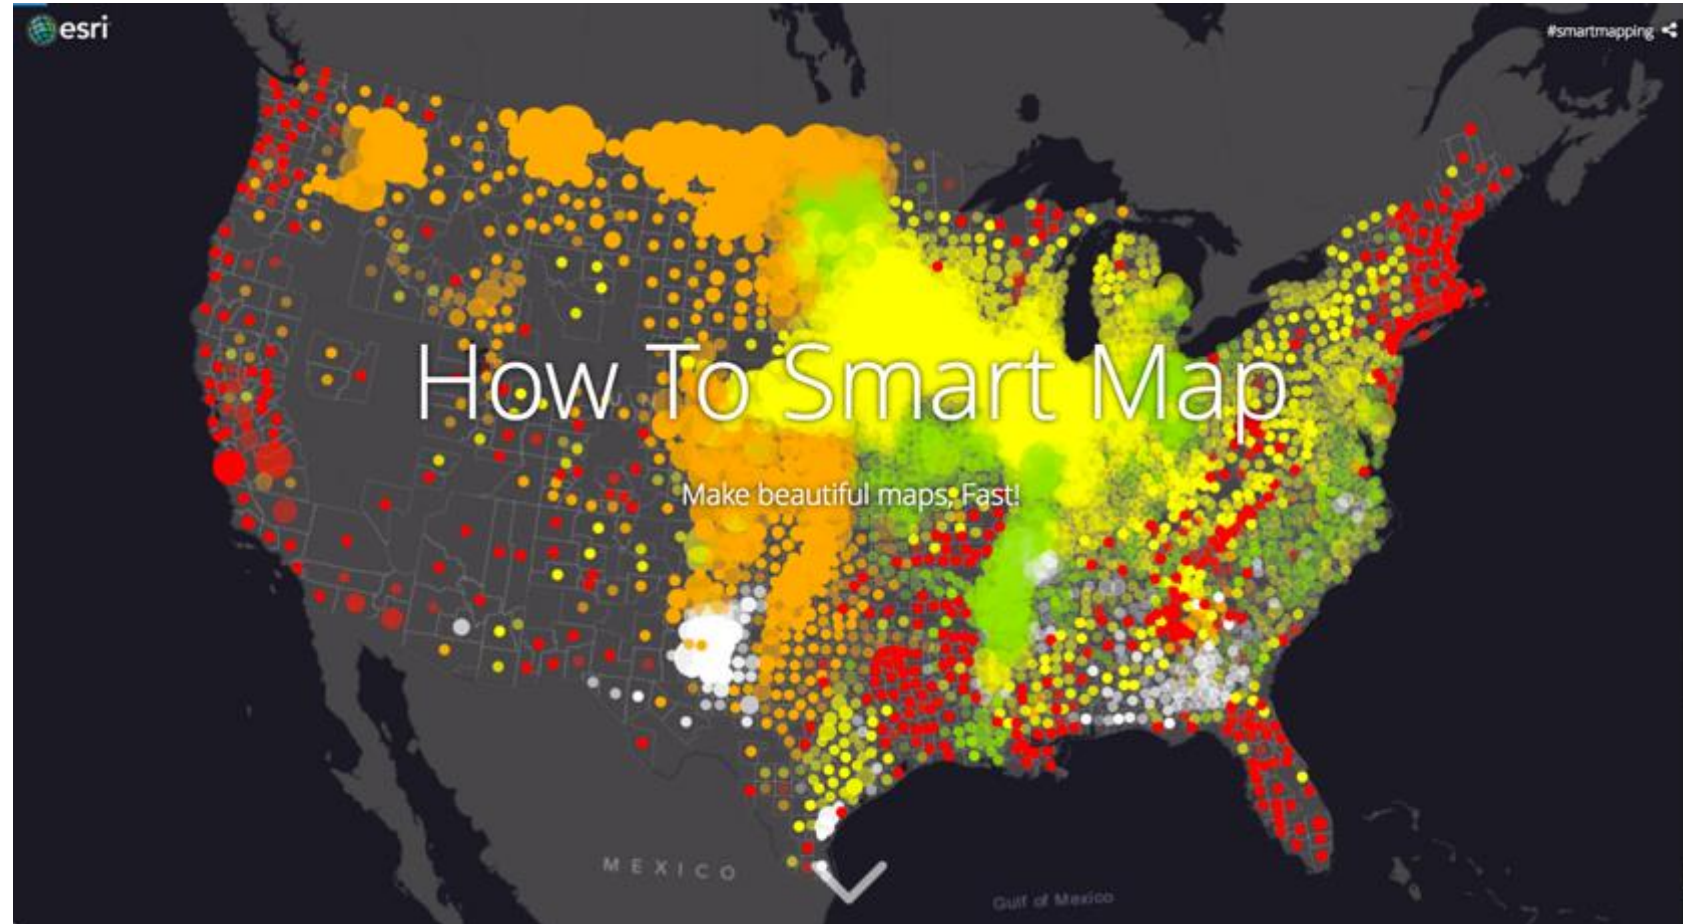

This tool aims to recount, using images and maps, the long road of struggle of the Kichwa de Sarayaku people in order to protect their territory both within Ecuador and before international courts of justice. Throughout this journey, they have been assisted by a legal team, in which the Centre for Justice and International Law (CEJIL) is a participant.

 To access the narrative in its entirety visit on the **red box** on the bottom of this tool

Story Maps are simple web apps that combine interactive maps, multimedia content, and elegant user experiences

What are
Story Maps?

Story Maps are simple web apps that combine interactive maps, multimedia content, and elegant user experiences to tell stories about the world.

What are
Story Maps?

Most story maps are hosted by Esri in the cloud (but you can opt to host them yourself).

What are
Story Maps?

Story Maps include a builder that enables you to author a sophisticated story with no GIS or web development skills.

What are
Story Maps?

Story Maps work equally well on PCs, tablets, and smartphones

What are
Story Maps?

Story Maps are open source. You're free to download and customize them.

What are
Story Maps?

The background features a warm color palette of oranges and reds with a textured, marbled appearance. In the lower-left corner, there are dark blue, wavy shapes that contain a lighter blue grid pattern, resembling a stylized map or urban layout.

A Dynamic Collection of Crowdsourced Photos

Story Map CrowdsourceSM **BETA**

Publish and manage a crowdsourced story to which anyone can contribute photos with captions. Use Crowdsource to engage your audience and collect their photos and experiences, thoughts or memories on the subject of your choice, all linked to a map. A vetting function lets you review and approve contributions.

[BUILD](#)[OVERVIEW](#)[GALLERY](#)[TUTORIAL](#)

A Curated Set of Places of Interest

Story Map ShortlistSM **BETA**

Present a large number of places organized into tabs based on themes, for example, food, hotels, and attractions. As your users navigate around the map, the tabs update to show them just the places in their current map extent.

Story Map Tour Tutorial

[Overview](#) [Gallery](#) [Tutorial](#)

Before you start

To make a Story Map TourSM, you first need to assemble and organize the media (photos or videos) you want to use.

For photos, you can use images of any size and shape, but we recommend landscape orientation (i.e., images that are wider than they are tall). Map Tours generally look best if all the images have the same size and aspect ratio, so your users don't get distracted by differently shaped images as they go through your tour. The recommended image aspect ratio is 4:3.

You have several choices for image storage. You can use images stored in Flickr or Google+ / Picasa (but Picasa is no longer accepting new uploads). Map Tour takes advantages of optimizations in how these services store your photos, so you can upload an image of any size and it will load quickly in your story. Map Tour also automatically reads in geotag information from the images to locate them on your map, and uses any title and caption text stored with the images. If your images don't have location information the Map Tour Builder will let you specify their map location interactively.

If you are using an ArcGIS subscription account with Publisher privileges, you have the additional option of uploading your image files from your computer directly into the Map Tour Builder, where they will be stored in the cloud with your map. This is a convenient option if your images aren't already online, or if you are creating a Map Tour that will be shared only inside your organization using images that you don't want to be accessible publicly.

You can also reference images that are on the web directly via their URLs. If you do this make sure the image file sizes aren't too large, because this can slow down performance. See the [Story Map Tour FAQs](#) for our image size recommendations.

A Map Tour can use videos instead of images, as well as both images and videos. The Builder can access videos stored in a YouTube account directly, or you can specify URLs to individual videos in YouTube, Vimeo, and so on.

You'll include the names and captions for the photos and videos in your Map Tour directly in the Builder. Alternatively, if you want to prepare everything ahead of time, you can make a spreadsheet containing the names, captions, locations, and media URLs that define your Map Tour, and import that spreadsheet into the Map Tour Builder as a CSV file. The Builder
