

Configuring Geocoding for Portal for ArcGIS and ArcGIS Online

Christa Hash

Will Ibekwe

Outline

- **Configuring locators in ArcGIS Online**
- **Configuring locators in Portal for ArcGIS**

Why use your own locator?

- Use locators based on reference data that you created and maintained
- Control the capabilities of the locator, e.g. intersection, spatial offset
- Apply a specific geocoding fallback workflow
- Use services you host
- Use secured services

Requirements for Adding Locators to ArcGIS Online

- **Minimum Requirements**

- Member of ArcGIS Online Organization with Administrator role
- Locators or composite locators created using ArcGIS Pro or using ArcGIS 10.0 or later
- Geocode services need to have been published on ArcGIS Server version 10.1 or later with public access such as Amazon Cloud
- Secured services have to be added as proxy items stored with credentials

- **Suggestions (auto-complete) support**

- Locators must have been created using ArcGIS Pro or in ArcGIS 10.3 or later
- ArcGIS Server must be version 10.3 or later

Geocoding with ArcGIS Online

- **Geocoding with ArcGIS Online using the World Geocoding Service**
 - **Benefits:**
 - Easy to set up
 - Simple to use
 - Basic organizational account gets you everything you need to geocode single addresses and tables of addresses (using credits)
- **Geocoding with a custom geocode service published through your Organizational Account on ArcGIS Online**
 - **Benefits:**
 - Can offer you more control over the locators you're using and the specificity of results
 - Can provide increased security for your service if you make the service secured

The background features a warm orange-to-red gradient with a crumpled paper texture. In the lower portion, there are layered, wavy shapes in shades of blue and purple, some containing a faint white grid pattern resembling a city map.

DEMO

Geocoding with ArcGIS Enterprise

- **Geocoding with the World Geocoding Service through ArcGIS Enterprise**
 - **Benefits:**
 - Provides the same fast and consistent results as geocoding against the World Geocoding Service using ArcGIS Online
 - Offers increased security for the data you're using for geocoding
 - Ensures that all stored data is behind the firewall
- **Geocoding with a custom geocode service published to ArcGIS Enterprise**
 - **Benefits:**
 - Provides you with completely secure data and geocoding that can only be accessed and used behind your firewall
 - Gives you complete control over the locators you're using, which can improve specificity of results for your individual use case
 - Eliminates need for credits, since you can host all data and services

The background features a warm orange-to-red gradient with a crumpled paper texture. In the lower portion, there are layered, wavy shapes in shades of blue and purple. The central blue area contains a white grid pattern, resembling a city map or street layout.

DEMO

Recap

- Discussed the benefits of creating your own custom locators to use as geocoding services
- Covered the requirements necessary to create and publish your own locators using ArcGIS Online or ArcGIS Server
- Evaluated the benefits of the different geocoding and publishing workflows
- Demonstrated the various publishing and geocoding workflows for ArcGIS Online and ArcGIS Enterprise using the World Geocoding Service and custom locators

Upcoming Geocoding Sessions

Today

- Geocoding: High Performance Batch Geocoding with ArcGIS
 - **1:30pm – 2:45pm in Room 30 E**

Tomorrow

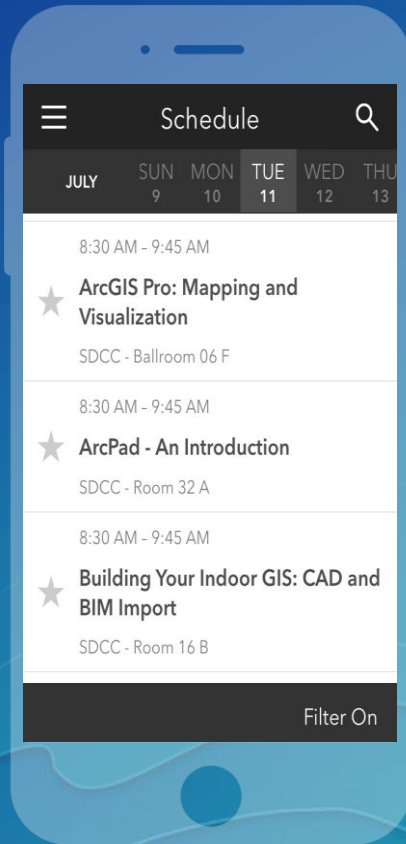

- Configuring Geocoding for Portal for ArcGIS and ArcGIS Online
 - **10am – 10:30am Tech Theater 15**
- Geocode Like a Pro: Getting Started with Geocoding in ArcGIS Pro
 - **11:00am – 11:30am Tech Theater 15**
- Packaging Network and Geocoding Data for Navigator
 - **12pm – 12:30pm in Tech Theater 15**
