

Geometric Networks: An Introduction

Christopher Thomas

David Crawford

Expectations

Presumed knowledge of the Geodatabase

- Features classes
- Tables
- Subtypes
- Domains
- Attachments
- Editor tracking
- Relationship classes

Agenda

- What is the Geometric Network?
- When to use a Geometric Network
- Editing and analyzing
- Validating
- Programing and performance
- Deployment tips
- Future Plans

What is a Geometric Network?

- Why was it developed?
- The network you see in the map
- The logical network behind the scenes
- Features in a geometric network

What is a Geometric Network

Why was it developed?

- **Motivation**
 - Emerging competitive industry
 - Provide support for utilities and the natural resource sectors

What is a Geometric Network

The network you see in the map

- **A way to model common networks and infrastructures found in the real world.**
- **Definition**
 - A network of connected custom point and lines features in a map
 - Supported by a logical network that maintains connectivity relationships
 - Connectivity is based on geometric coincidence
 - Rules and custom features control how things connect

What is a Geometric Network

The logical network behind the scenes

- An index that maintains the connectivity relationships between edges and junctions
 - Geometrically coincident
 - Supporting rule
- Purpose
 - Make things faster
- Use
 - Accessible programmatically
 - Custom analytic tools
 - Maintains weights

What is a Geometric Network

Features in the network

- **Custom features**
 - Type defines how other features can connect to it
 - Store more than just information about that feature
- **Comparison**
 - Non-custom features - store information about that feature
 - Custom features - feature information + connected neighbor

What is a Geometric Network

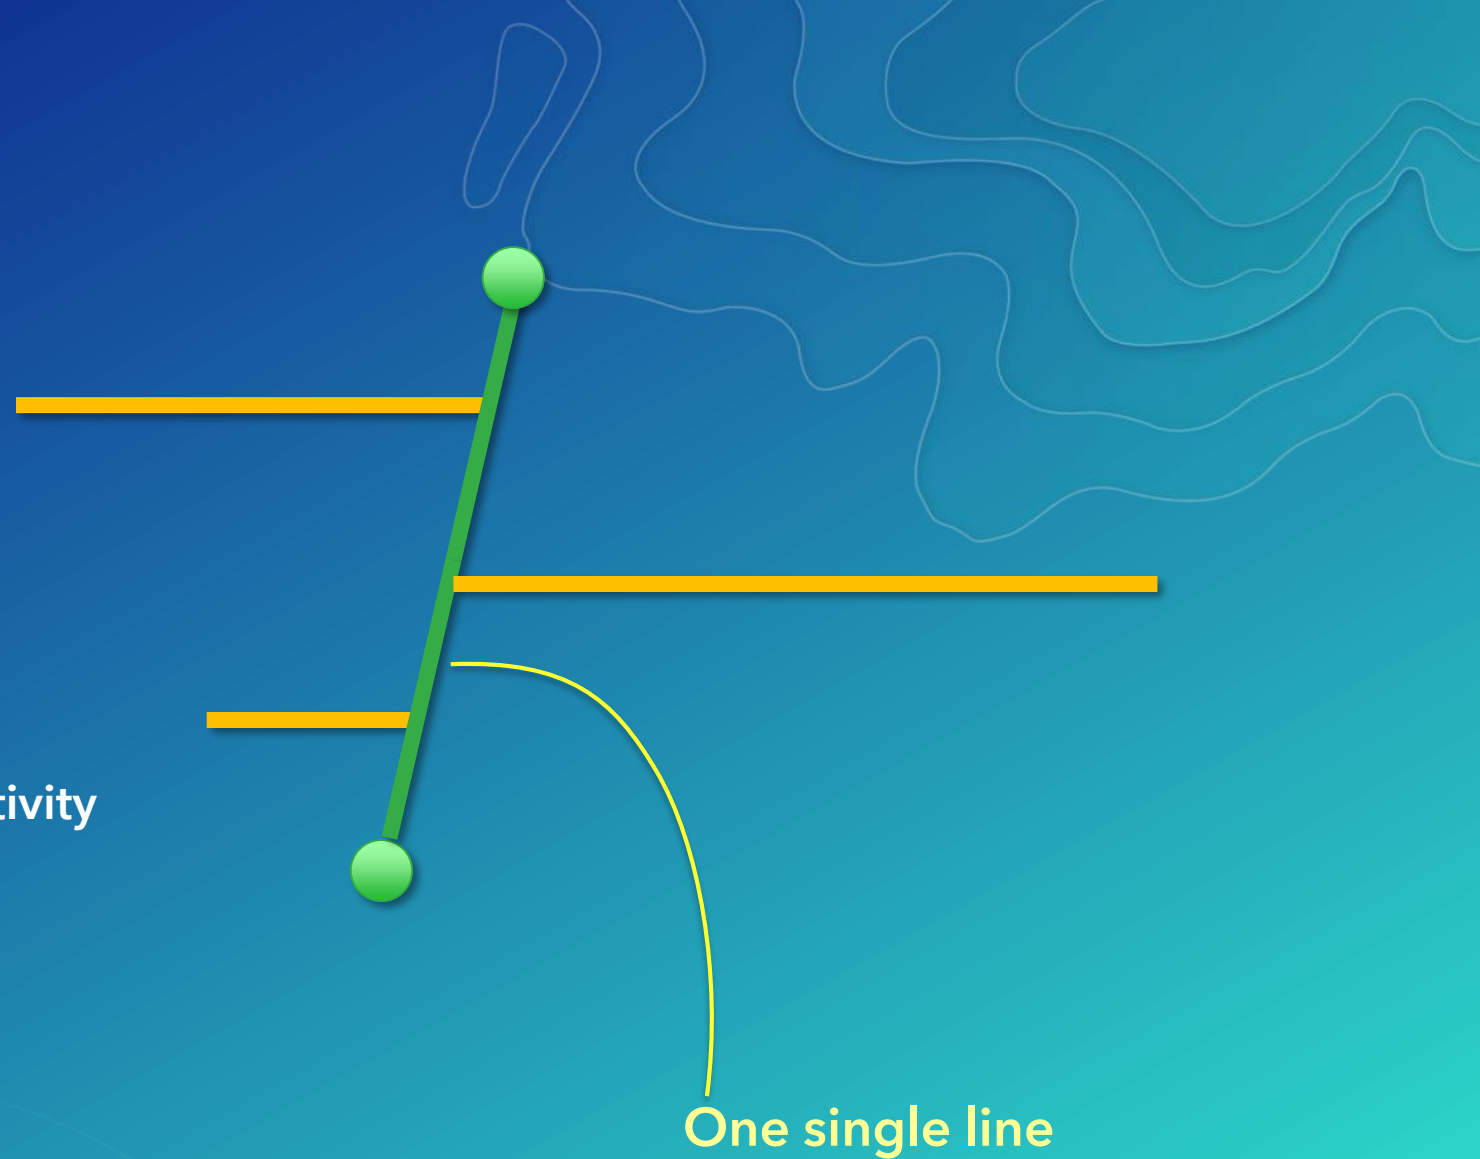

Features in the network

- Shape: junction or edge
- 4 types
 - Orphan junctions *system maintained
 - User defined junctions
 - Complex edges
 - Simple edges

What is a Geometric Network

Features in the network

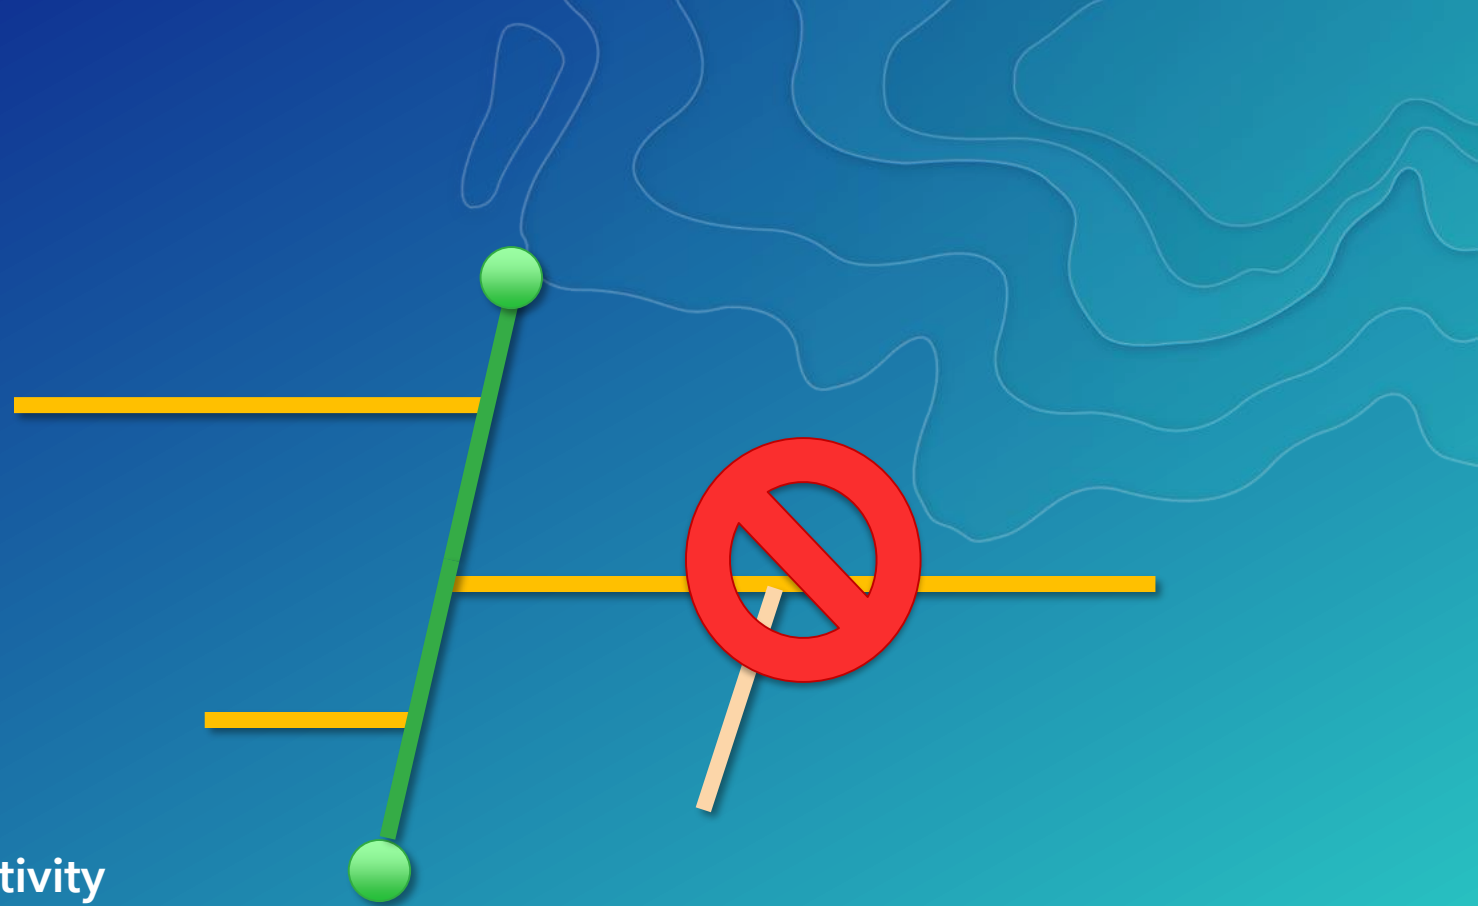

- Shape: junction or edge
- 4 types
 - Orphan junctions
 - User defined junctions
 - **Complex edges** = midspan connectivity
 - Simple edges

What is a Geometric Network

Features in the network

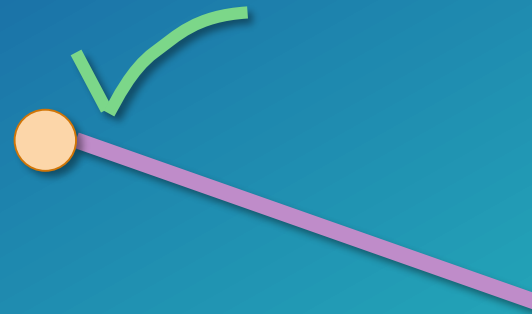

- Shape: junction or edge
- 4 types
 - Orphan junctions
 - User defined junctions
 - Complex edges
 - **Simple edges** = no midspan connectivity

What is a Geometric Network

Rules

- Tell the network what is allowed to be connected
- Restrict the number of features allowed to connect
- 2 types
 - Defined at the subtype level
 - Edge-junction
 - Edge-junction-edge
- Analyzed post-process

What is a Geometric Network

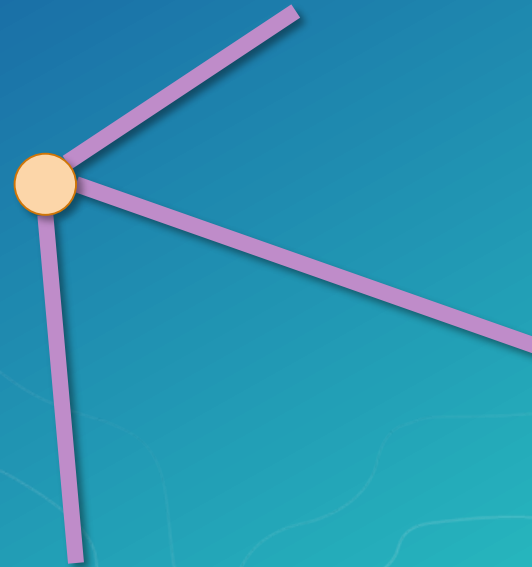

Rules

- Tell the network what is allowed to be connected
- Restrict the number of features allowed to connect

- 2 types

- Defined at the subtype level
- Edge-junction
- Edge-junction-edge

- Analyzed post-process

What is a Geometric Network

When you should use a geometric network

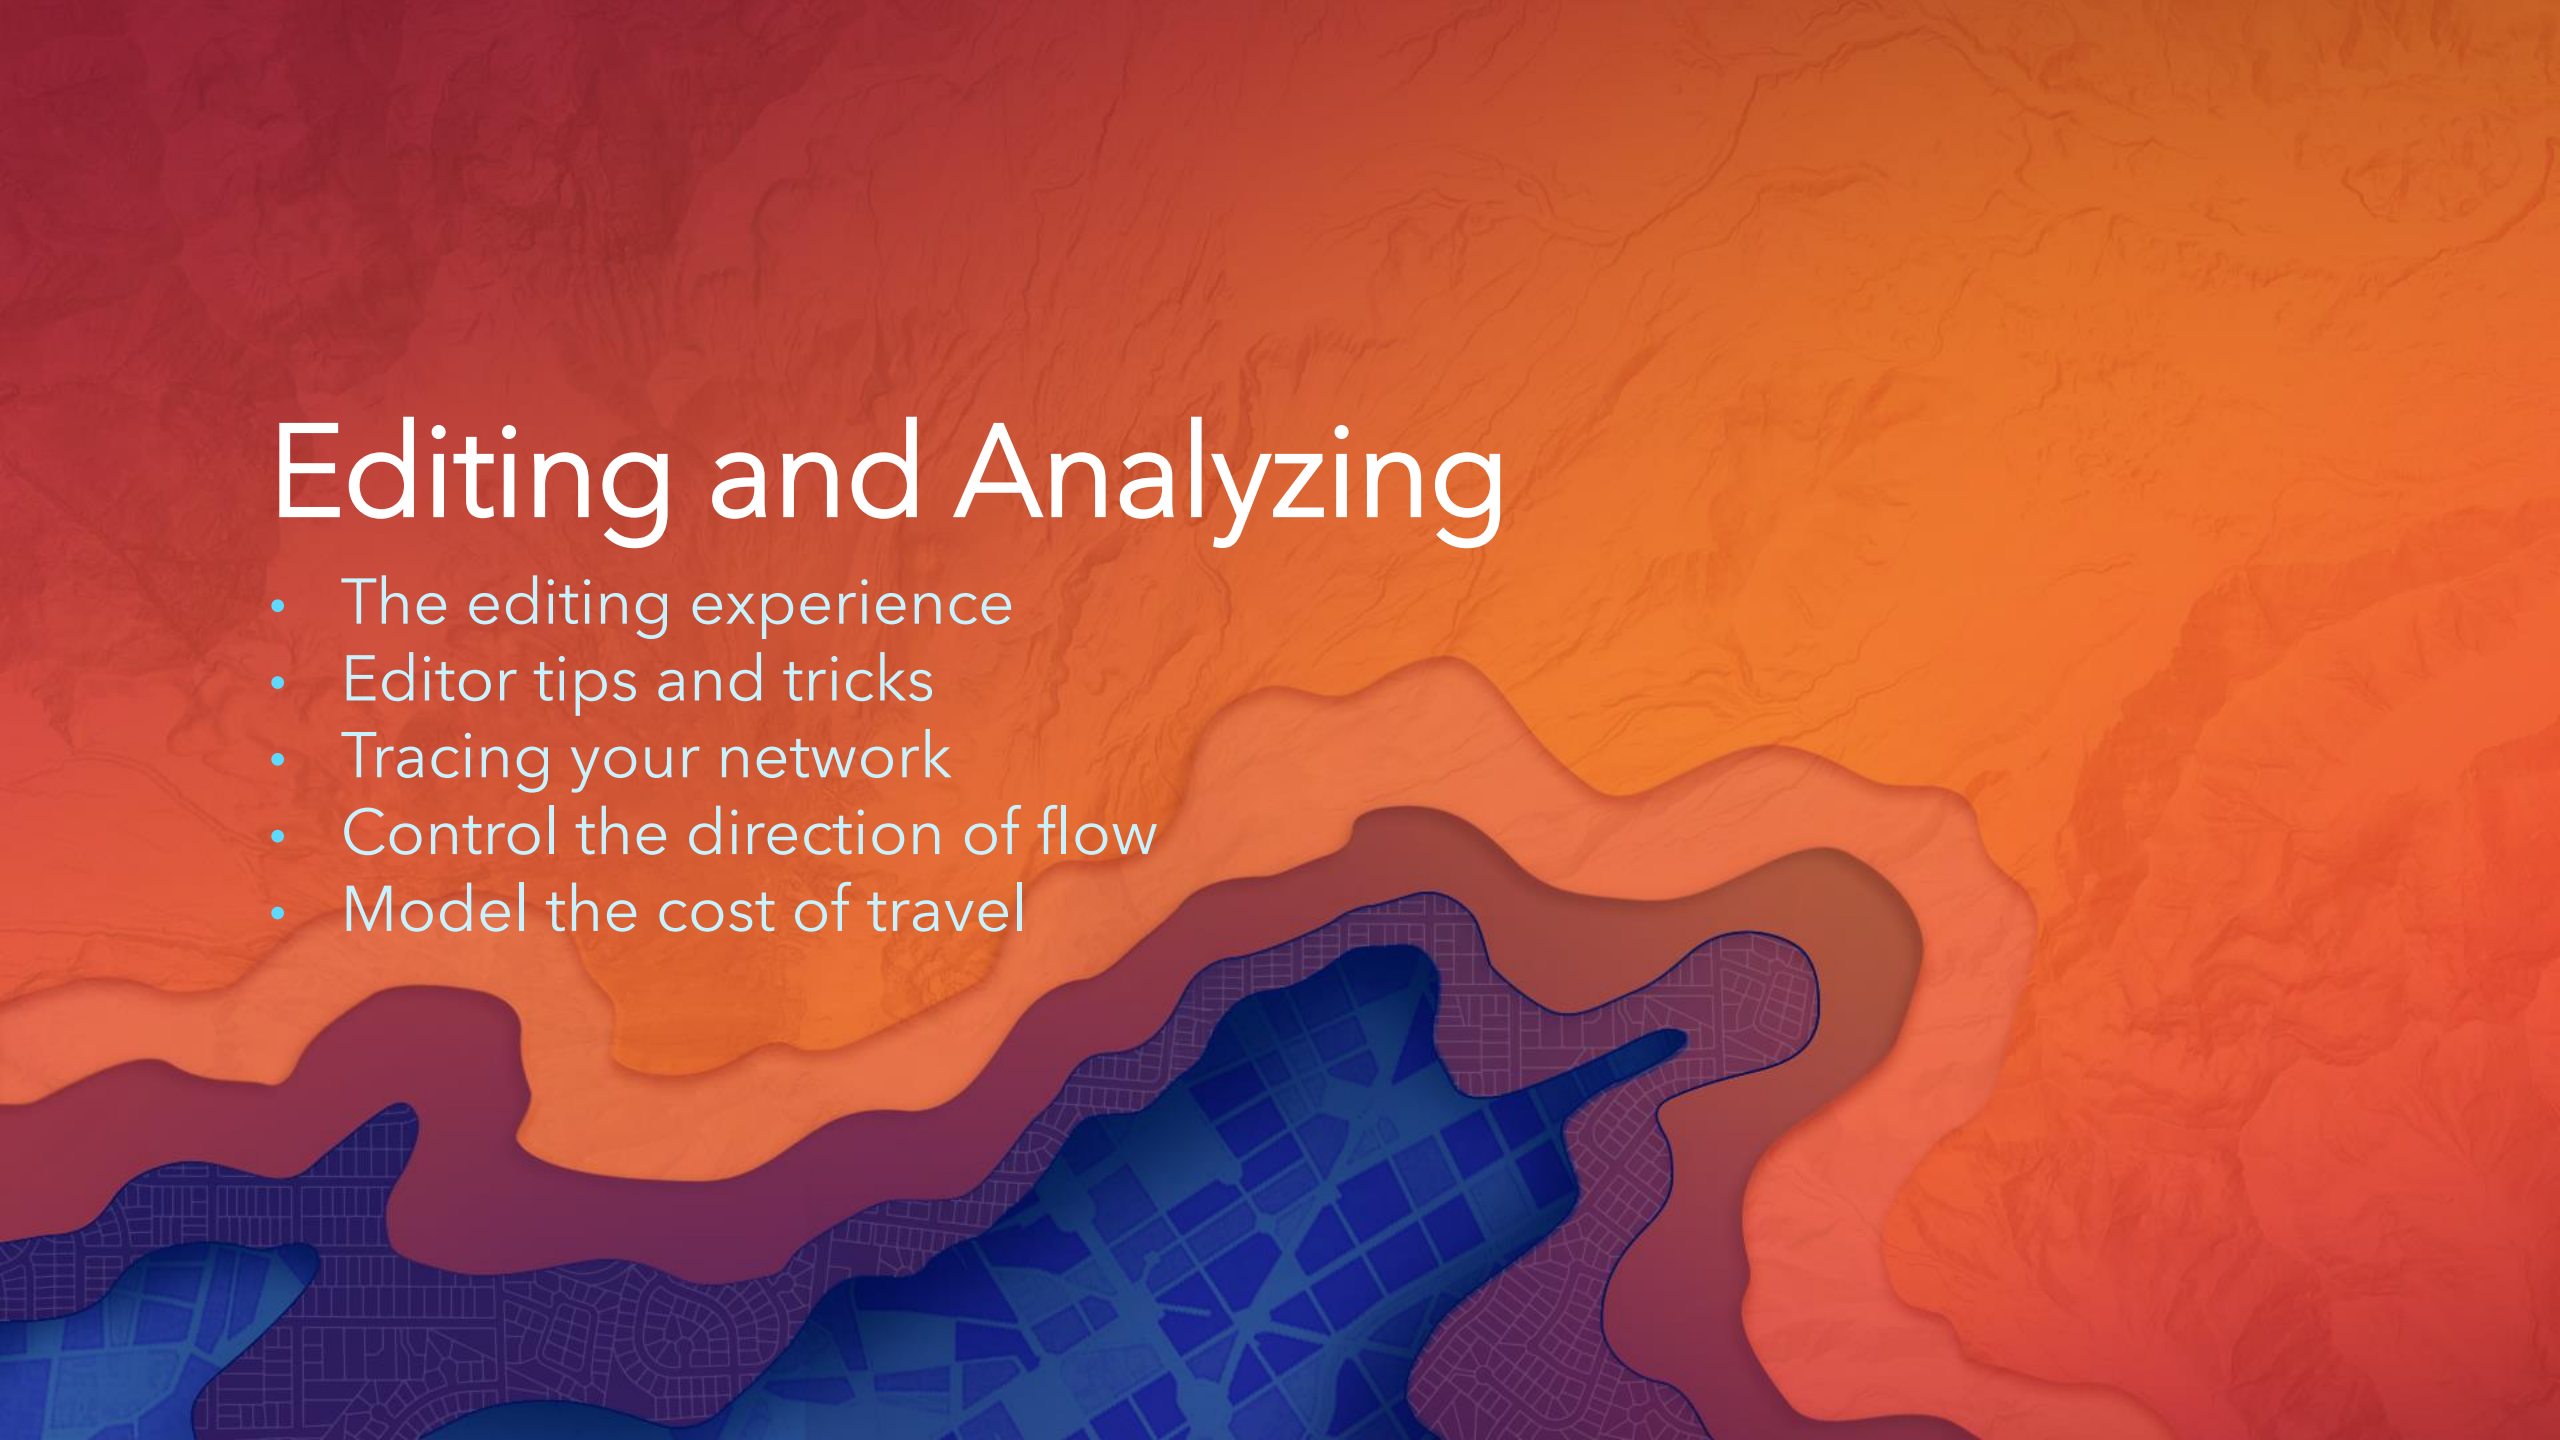

- **Model utilities or natural resource systems**
 - Gas, electric, telecommunications, waste water
 - Rivers, stream, watersheds
- **Capabilities**
 - Control how things connect
 - Connectivity on the fly
 - Trace pathways in the network
 - Cost of travel through paths

Creating and Configuring Demonstration

Editing and Analyzing

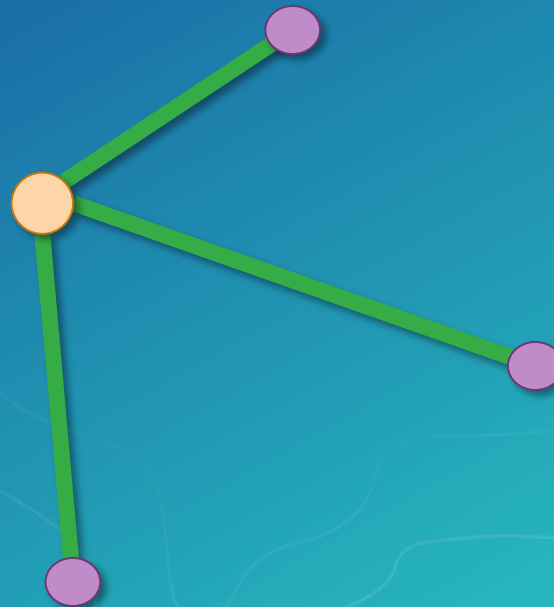

- The editing experience
- Editor tips and tricks
- Tracing your network
- Control the direction of flow
- Model the cost of travel

Editing

The editing experience

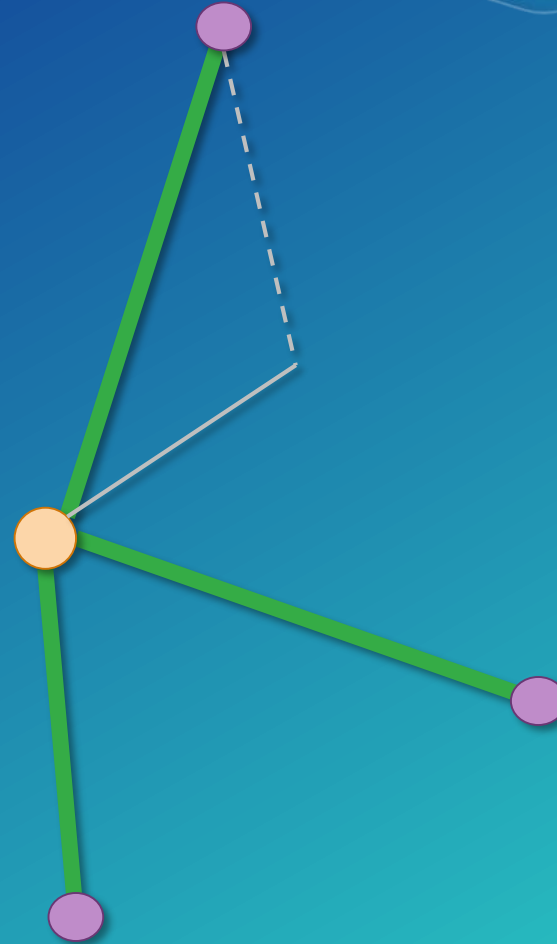

- **Connectivity on the fly**
 - Rubber banding
 - Move features logically
- **Junction subsumption**
 - Orphan junctions
 - Don't store attributes

Editing

The editing experience

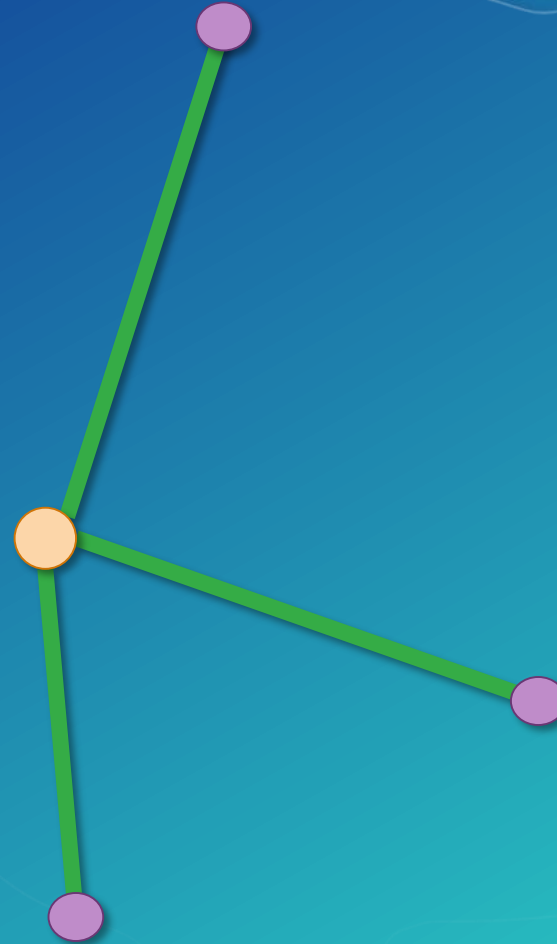

- **Connectivity on the fly**
 - Rubber banding
 - Move features logically
- **Junction subsumption**
 - Orphan junctions
 - Don't store attributes

Editing

The editing experience

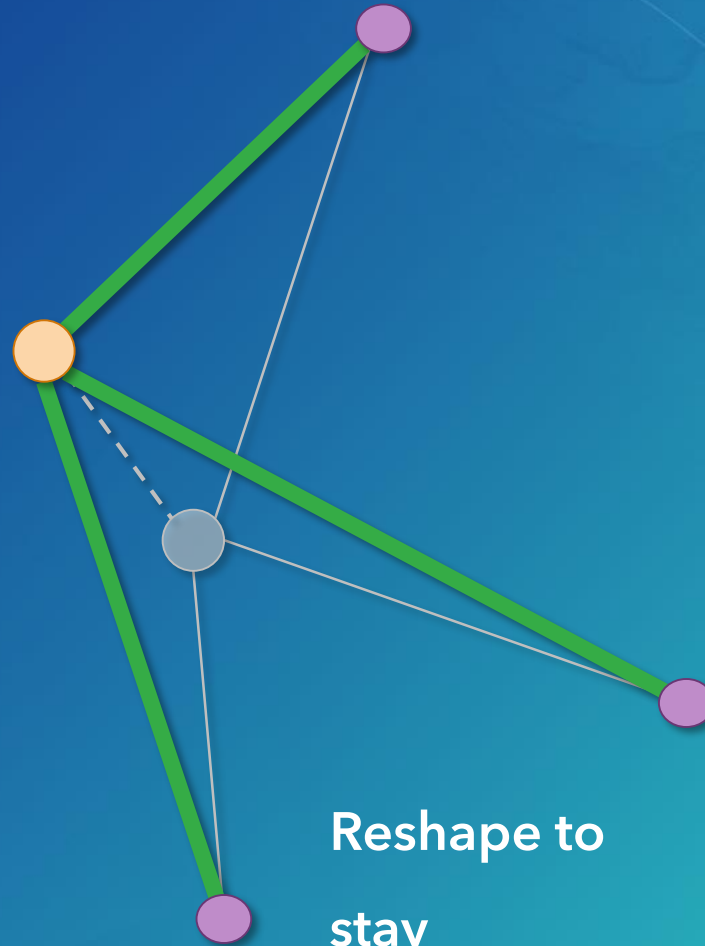

- **Connectivity on the fly**
 - Rubber banding
 - Move features logically
- **Junction subsumption**
 - Orphan junctions
 - Don't store attributes

Editing

The editing experience

- **Connectivity on the fly**
 - Rubber banding
 - Move features logically
- **Junction subsumption**
 - Orphan junctions
 - Don't store attributes

Reshape to
stay
connected

Editing

The editing experience

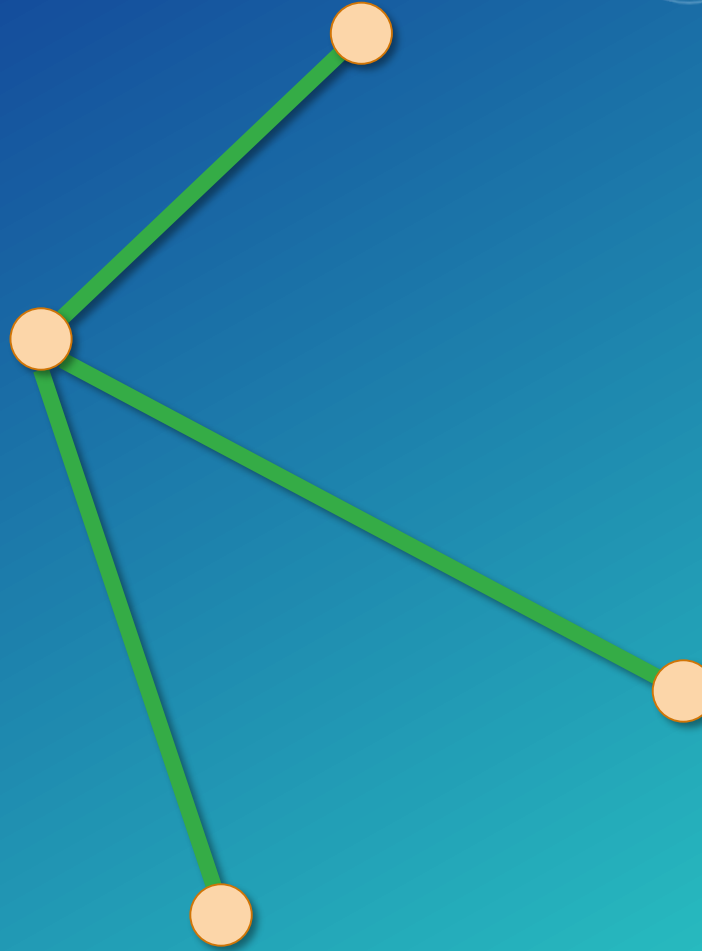

- **Connectivity on the fly**
 - Rubber banding
 - Move features logically
- **Junction subsumption**
 - Orphan junctions
 - Don't store attributes

Editing

The editing experience

- **Connectivity on the fly**
 - Rubber banding
 - Move features logically
- **Junction subsumption**
 - Orphan junctions
 - Don't store attributes

Editing

Editor tips and tricks

- **Snapping**
 - Ensure connectivity
- **Feature Cache**
 - Snapshot of geographic locations
 - Not an ready x, y, z information

Analyzing

Tracing

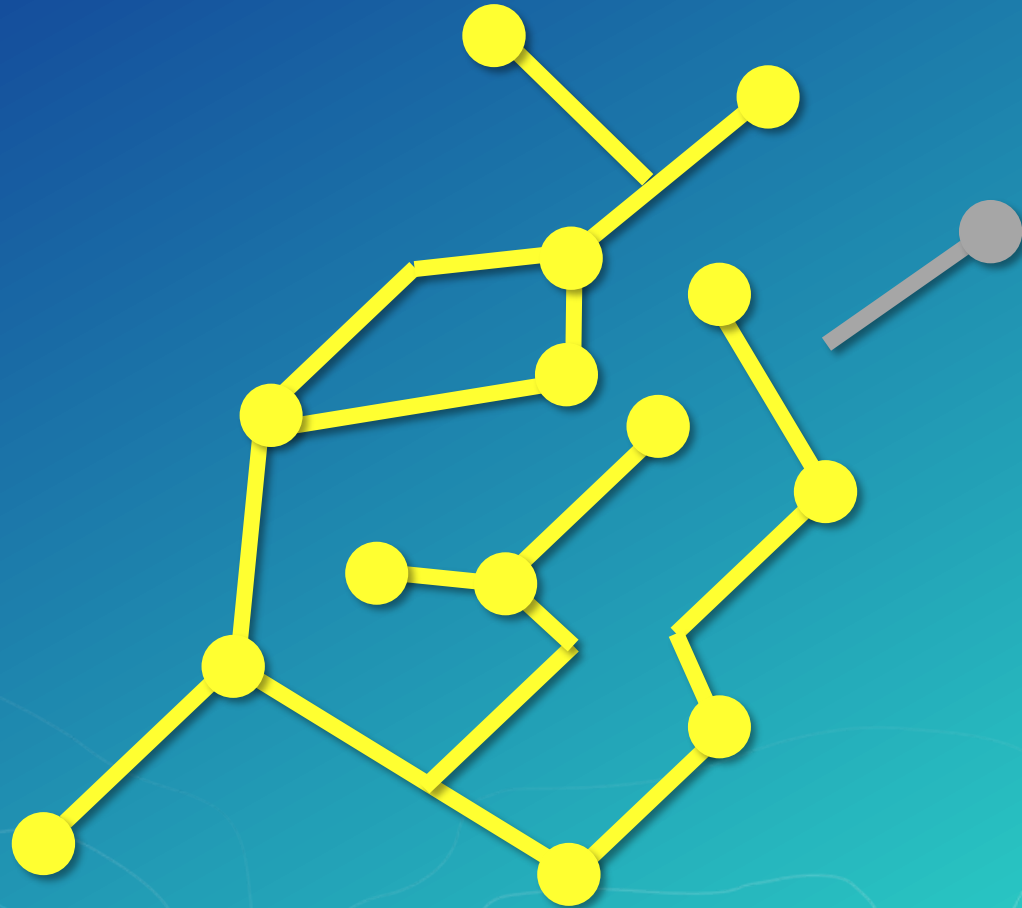

- Travel logical paths in the network
 - Ensure connectivity
 - Find upstream/downstream features
 - Discover loops and paths
- Trace components
 - Flags
 - Barriers
- Weights

Analyzing

Tracing

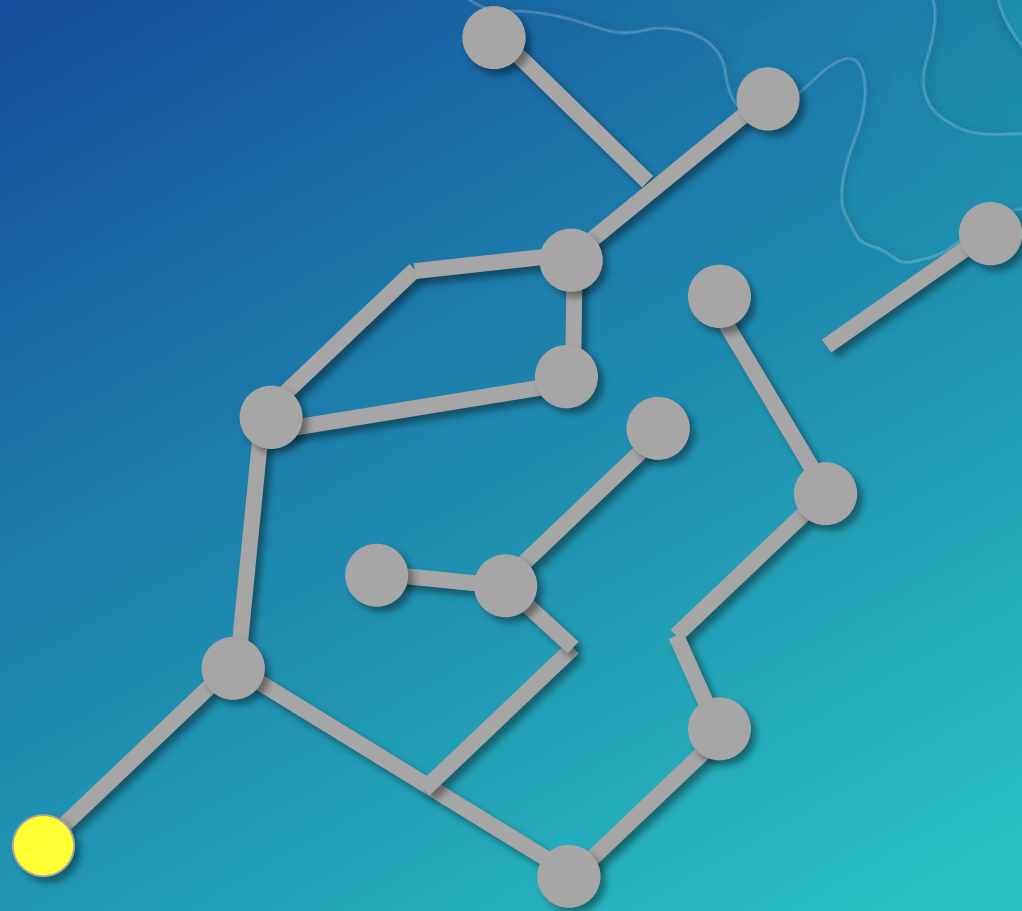

- Travel logical paths in the network
 - Ensure **connectivity**
 - Find upstream/downstream features
 - Discover loops and paths
- Trace components
 - Flags
 - Barriers
- Weights

Analyzing

Tracing

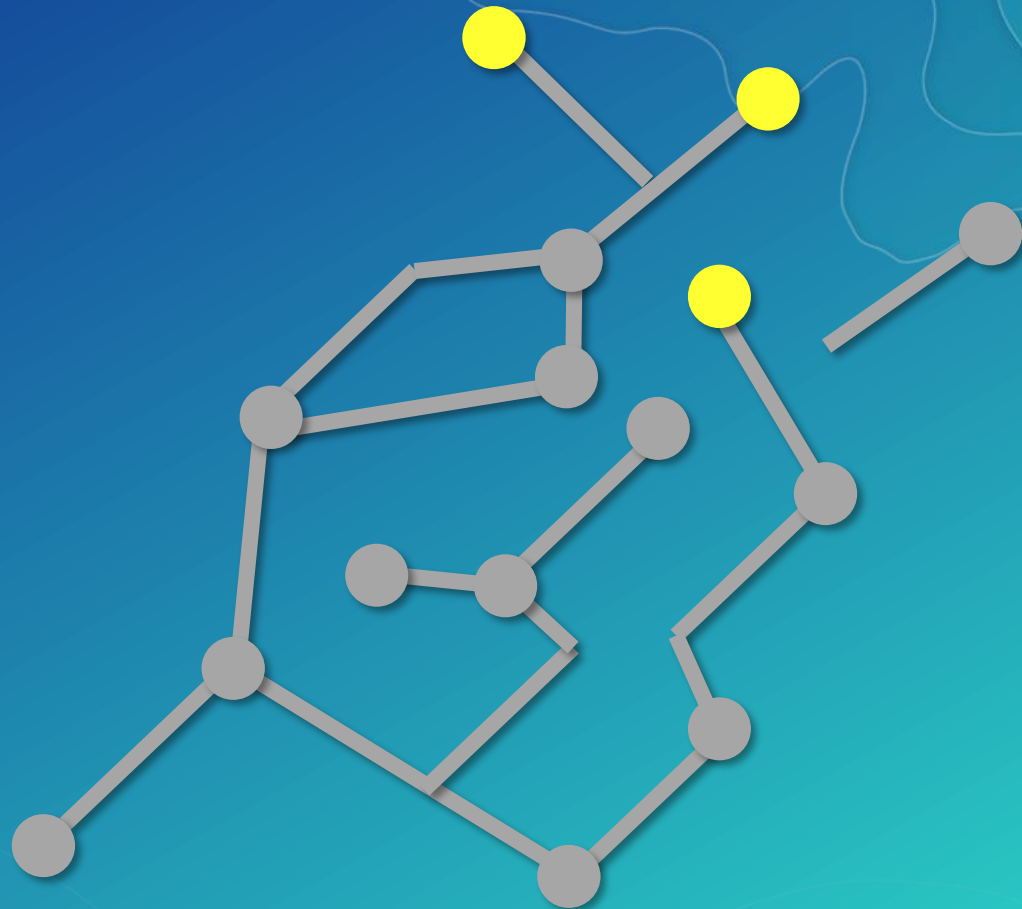

- Travel logical paths in the network
 - Ensure connectivity
 - Find **upstream**/downstream features
 - Discover loops and paths
- Trace components
 - Flags
 - Barriers
- Weights

Analyzing

Tracing

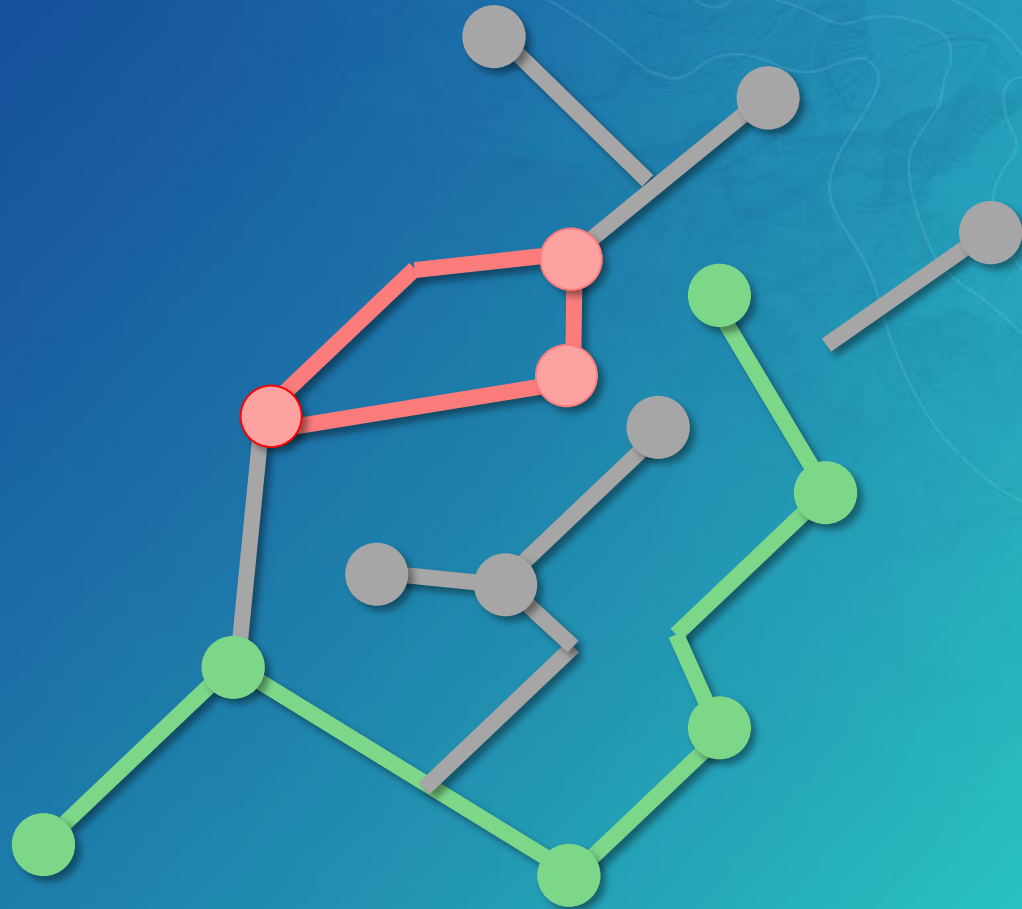

- Travel logical paths in the network
 - Ensure connectivity
 - Find upstream/**downstream** features
 - Discover loops and paths
- Trace components
 - Flags
 - Barriers
- Weights

Analyzing

Tracing

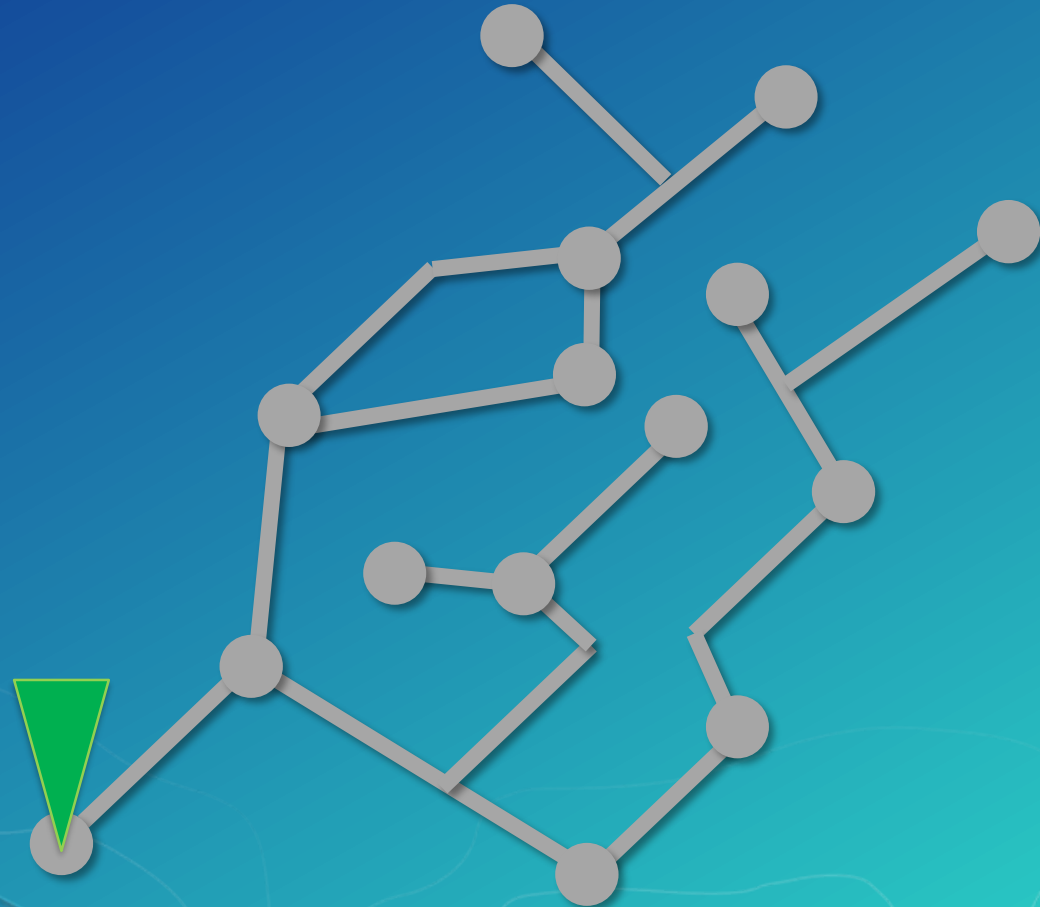

- Travel logical paths in the network
 - Ensure connectivity
 - Find upstream/downstream features
 - Discover **loops** and **paths**
- Trace components
 - Flags
 - Barriers
- Weights

Analyzing

Tracing

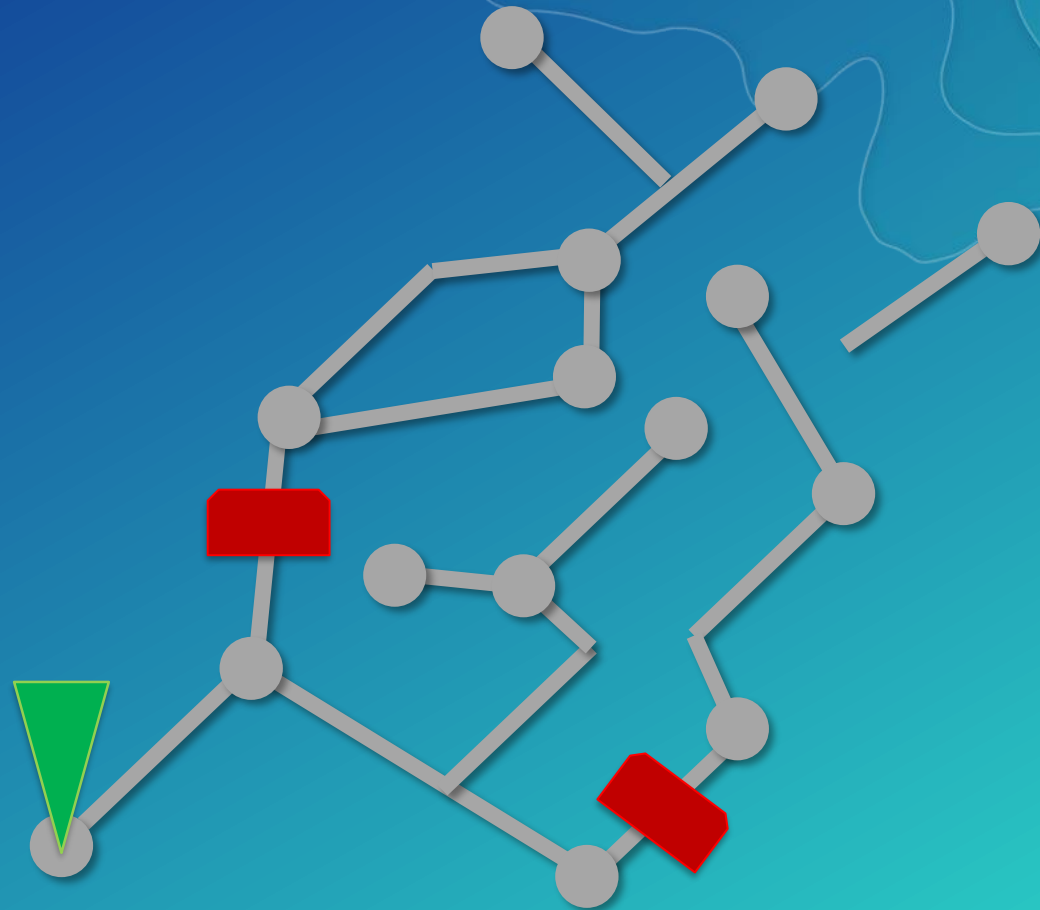

- Travel logical paths in the network
 - Ensure connectivity
 - Find upstream/downstream features
 - Discover loops and paths
- Trace components
 - **Flags**
 - Barriers
- Weights

Analyzing

Tracing

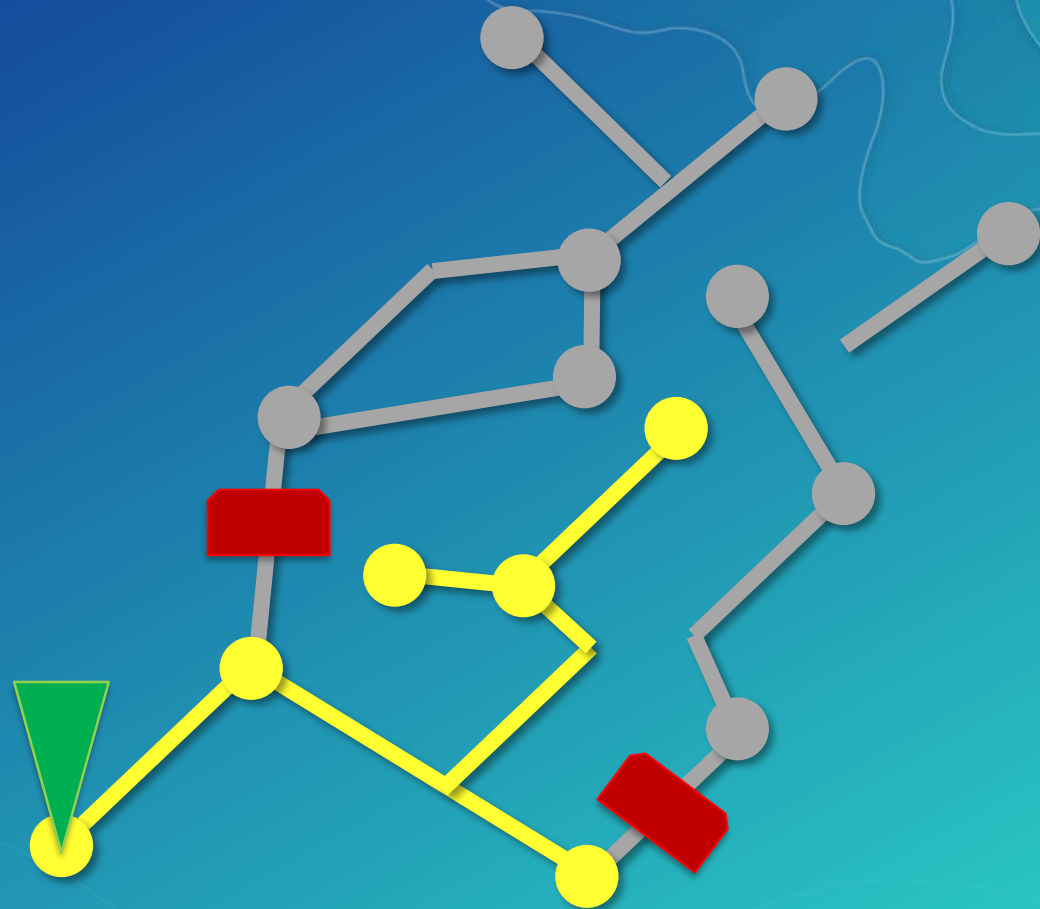

- Travel logical paths in the network
 - Ensure connectivity
 - Find upstream/downstream features
 - Discover loops and paths
- Trace components
 - Flags
 - **Barriers**
- Weights

Analyzing

Tracing

- Travel logical paths in the network
 - Ensure connectivity
 - Find upstream/downstream features
 - Discover loops and paths
- Trace components
 - Flags
 - **Barriers**
- Weights

Analyzing

Tracing : Flow direction

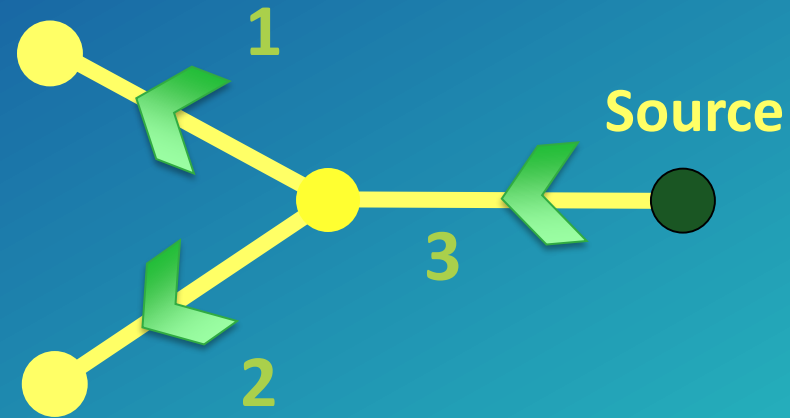

- **Direction of flow**
 - Travel a logical path
 - Easily visualized
- **Set direction**
 - Ancillary role - sources and sinks
 - Digitized direction

Analyzing

Tracing : Flow direction

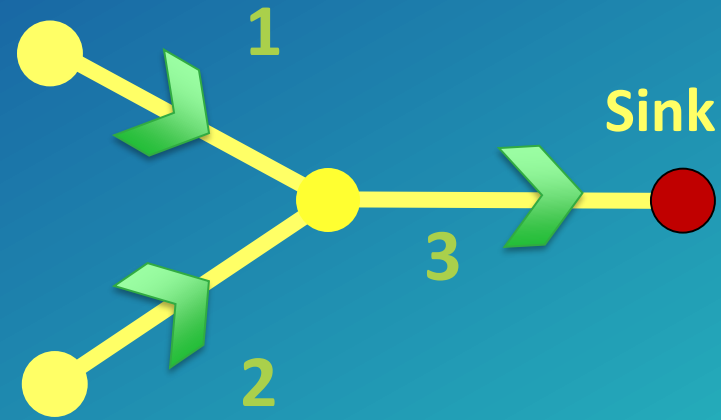

- **Direction of flow**
 - Travel a logical path
 - Easily visualized
- **Set direction**
 - Ancillary role - **sources** and sinks
 - Digitized direction

Analyzing

Tracing : Flow direction

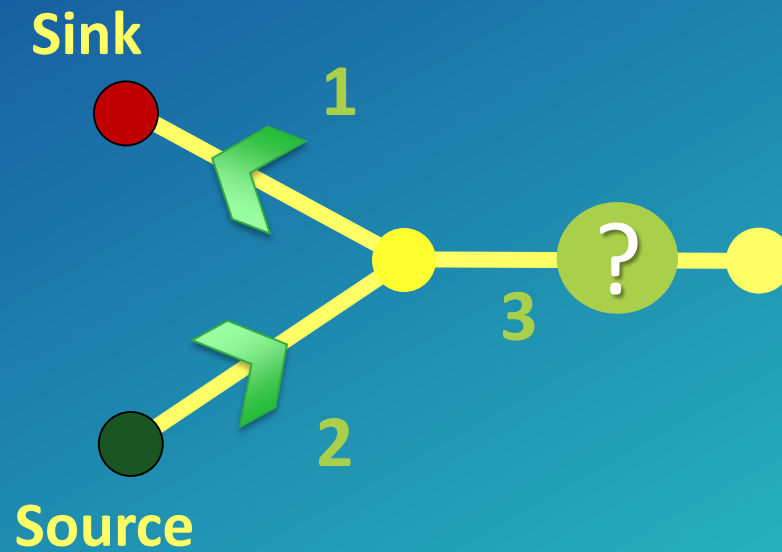

- **Direction of flow**
 - Travel a logical path
 - Easily visualized
- **Set direction**
 - Ancillary role - sources and **sinks**
 - Digitized direction

Analyzing

Tracing : Flow direction

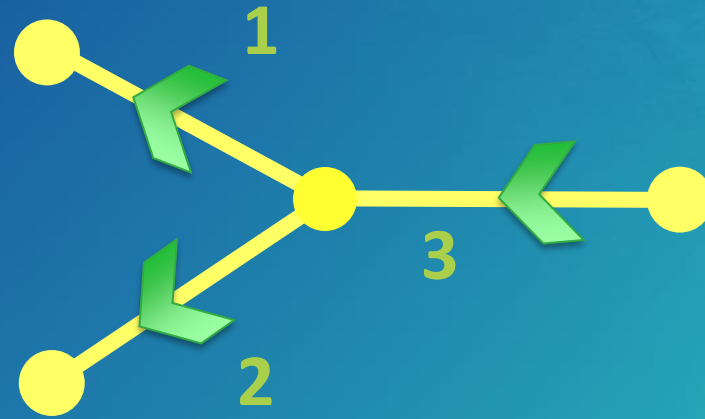

- **Direction of flow**
 - Travel a logical path
 - Easily visualized
- **Set direction**
 - Ancillary role - **sources and sinks**
 - Digitized direction

Analyzing

Tracing : Flow direction

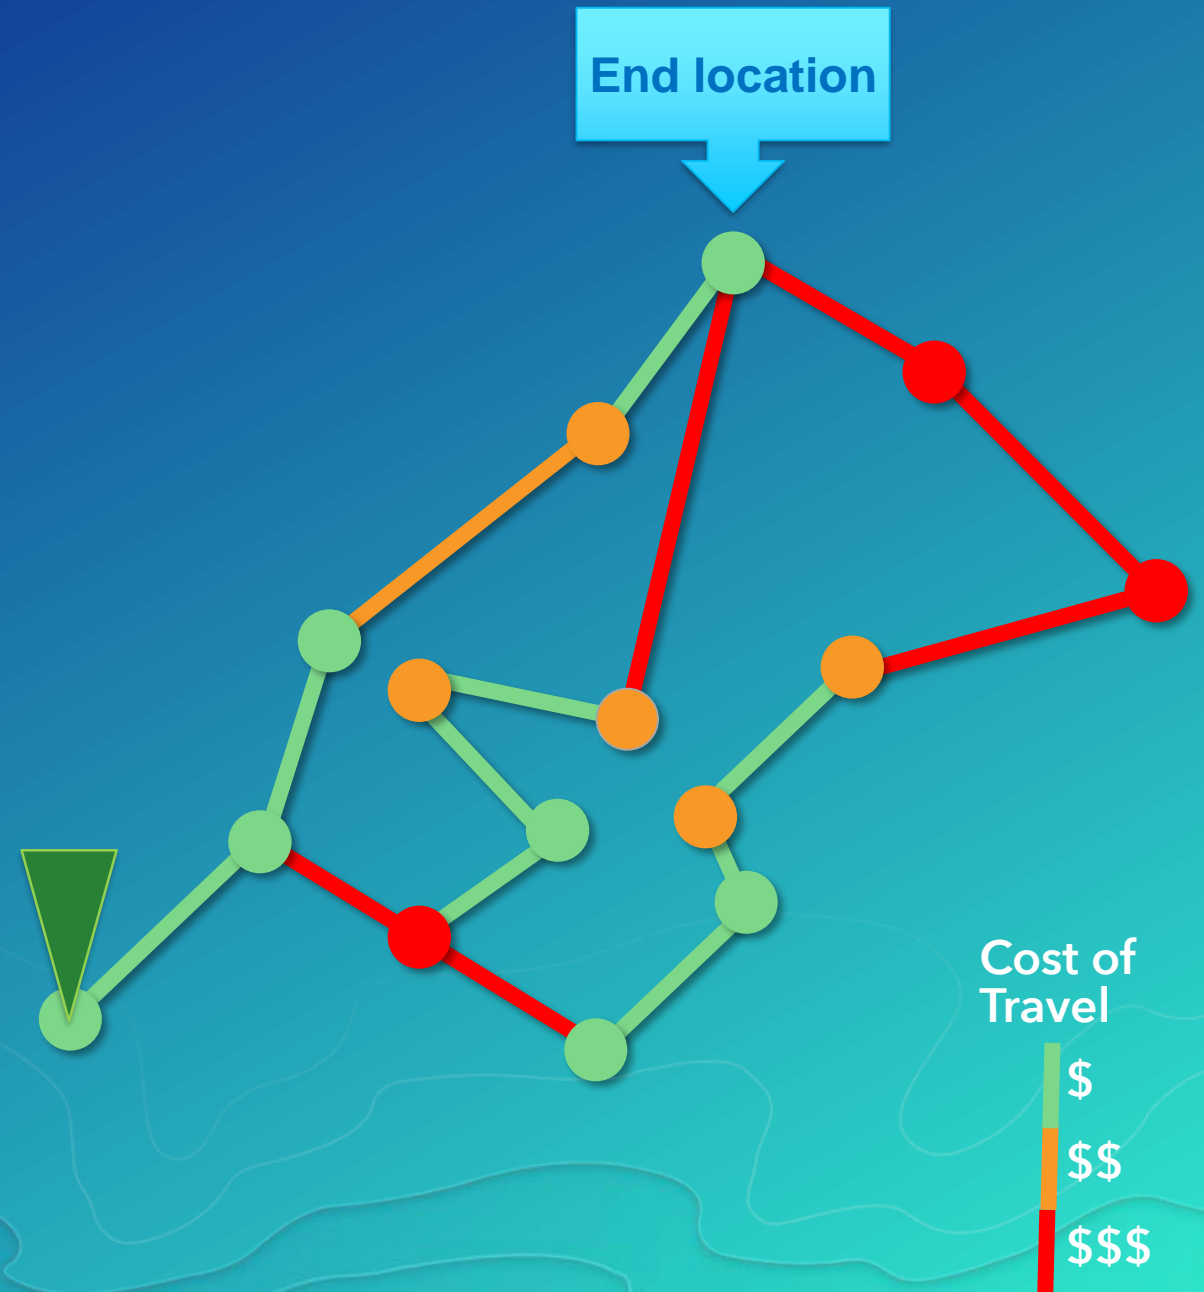

- **Direction of flow**
 - Travel a logical path
 - Easily visualized
- **Set direction**
 - Ancillary role - sources and sinks
 - **Digitized direction**

Analyzing

Tracing : Weights

- **Cost of travel**
 - Consider feature attribution
 - Assigned to weights in the index
- **Uses**
 - Least-cost analysis
 - Accumulation trace
- **3 Types**
 - Double, integer, and bitgate

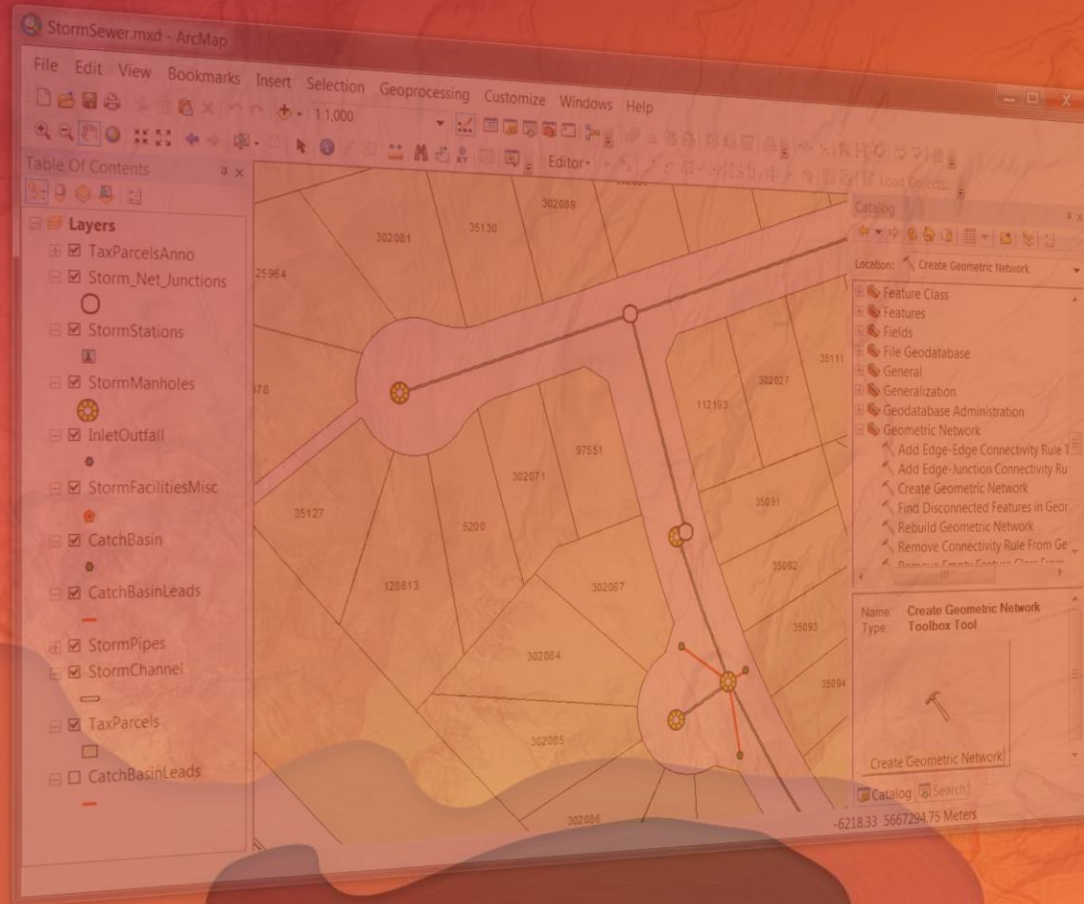

Analyzing

Tracing : Weights

- **Cost of travel**
 - Consider feature attribution
 - Assigned to weights in the index
- **Uses**
 - Least-cost analysis
 - Accumulation trace
- **3 Types**
 - Double, integer, and bitgate

Editing and Tracing

Demonstration

Validation and Performance

- Confirm network correctness
- Validation commands and tools
- Programing and the API
- Cache in on performance

Validation

Confirm network correctness

- **Rubber banding**
 - On the fly connectivity
- **Validation commands and tools**
 - Checks rules against the network
 - Batch process with GP tools
- **Analytics**
 - Find connected trace

Validation

Confirm network correctness

- **Rubber banding**
 - On the fly connectivity
- **Validation commands and tools**
 - Checks rules against the network
 - Batch process with GP tools
- **Analytics**
 - Find connected trace

Validation

Command tools

- **Verify Connectivity**
 - Compares the map with the index
- **Repair Connectivity**
 - Fixes connectivity
 - Map and index match
- **Rebuild Connectivity**
 - Rebuilds connectivity

Validation

Geoprocessing tools

- **Verify and Repair Connectivity**
 - Operate exactly as the tools on the toolbar
 - Can be scripted
- **Rebuild Network**
 - Drops and recreates an entire versioned Geometric Network
 - Not undoable and can be time consuming
- **Batch process**

Programming

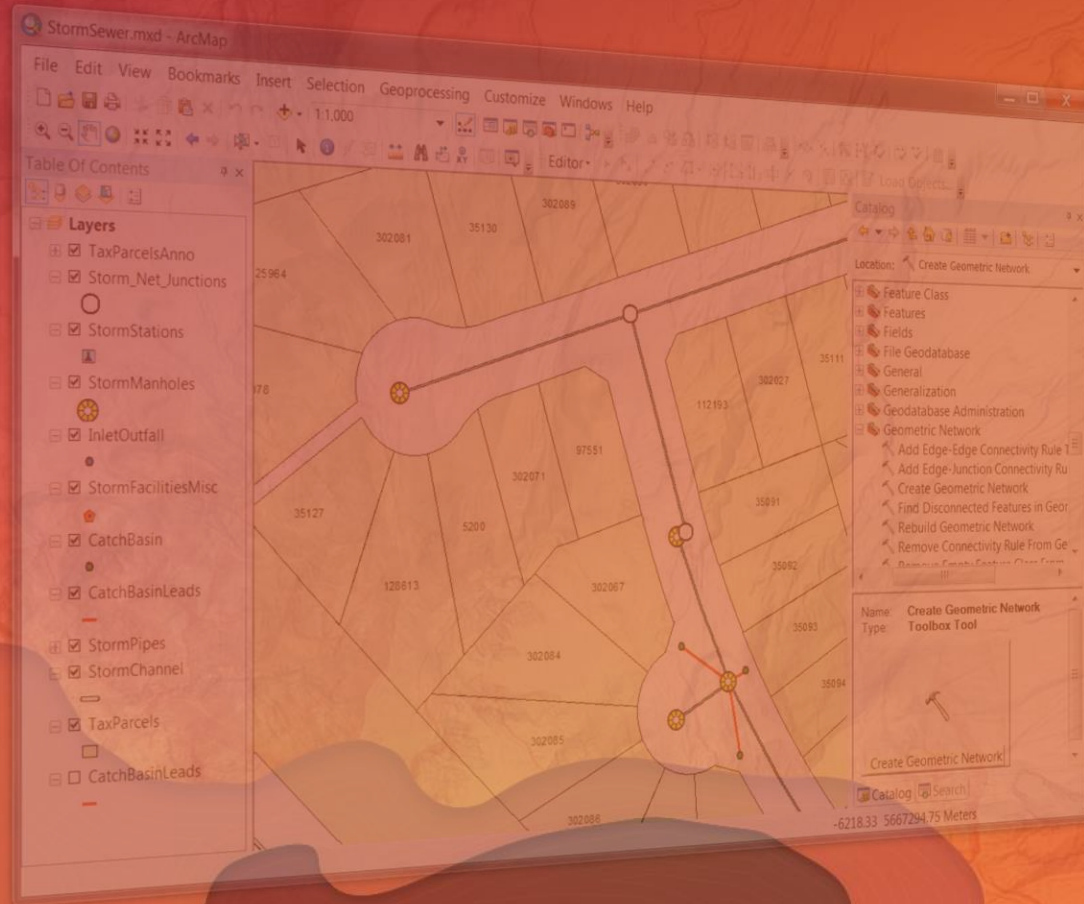

The API

- **Author your own analytic tools**
 - Through the ArcObjects API
- **Use the logical network**
 - Cached information
 - Increased performance

Performance

Working with the network

- **Editing**
 - Connectivity is maintained on the fly
 - Feature cache
- **Data configuration / modeling**
 - Make use of subtypes
 - Use optimal structure for your needs
 - Use test environment for development (prototype)
- **In a versioned editing environment...**
 - Manage your version tree (reconcile, post, compress)
 - Keep your indexes and statistics up to date (rebuild indexes, analyze datasets)

Validation

Demonstration

Deployment and Future Plans

- Preparing your data for a GN
- Understanding the quality of your data
- What you should do today
- What's coming...

Deployment

Preparing your data

- **Digitized direction**
 - Flow direction consideration
- **Use a topology for cleanup**
 - Geographical assessment
- **Data quality**
 - Understand level
 - Snapping tolerance

Deployment

Preparing your data

- **Script your setup**
 - Archive of rules
- **Prototype**
 - Early and often
 - Performance testing

Deployment

What you should do today if you are using the geometric network model

- **Move to or stay on ArcGIS Desktop version 10.2.1**
- **This is where we prioritize bug fixes through Utility Update patches**
- **UTU patch 7 is the current release with UTU patch 8 in the works.**

Future plans

New framework: Utility Network

- **Model complexities and details in network**
- **Services based architecture**
 - Seamless experience across the platform
- **Projected release**
 - ArcGIS Pro 2.1 and ArcGIS Enterprise 10.6 release
