

Enrich Your GIS Data with Geodatabase Attachments

Drew Flater

Geodatabase Attachments

Flexible way to create a relationship between GIS data and related images, PDFs, documents, media, or any other files

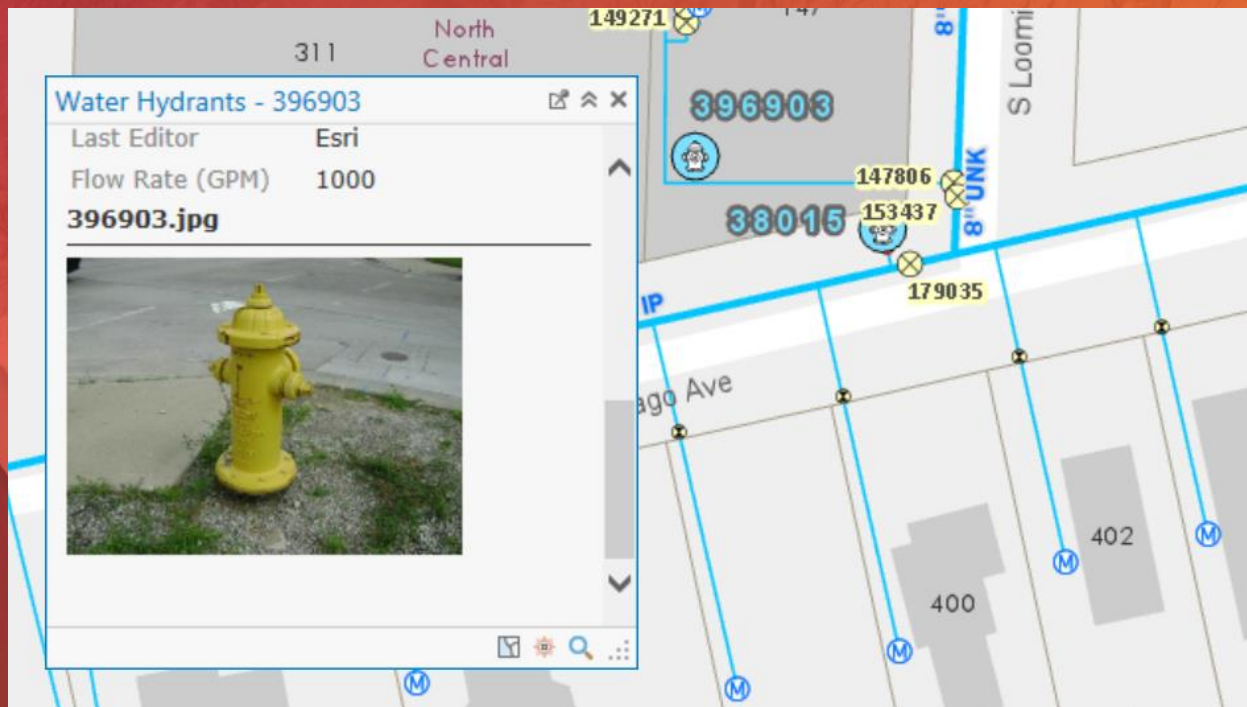

Can store one or many related files per feature

Files managed and stored internally in geodatabase

Easy to access attached files across the platform

ArcGIS Desktop + Server + Online + Apps

Demo

Enable, add, and view attachments
in ArcGIS Pro

Geoprocessing Tools

Tools support batch processing

Better experience when adding many attachment files

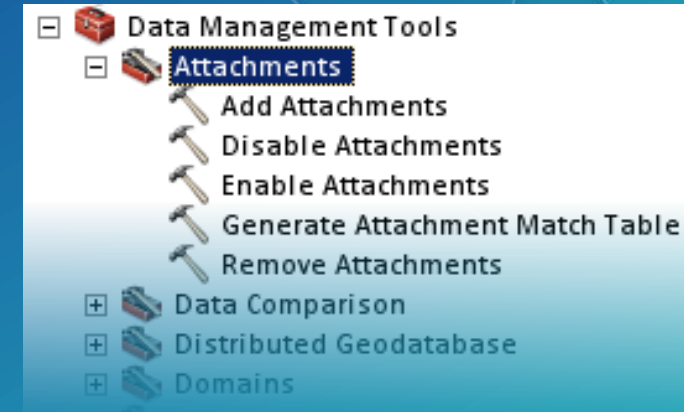

Can be built as part of a workflow

Tools to...

Enable or disable

Add or remove attachment files

Generate match table

The key to effectively use these tools is the *match table*

Table indicates which file is attached to which feature in the input data

Easy to create the match table using tool, spreadsheet, or field from input data

Maintain attachments

A set of tools are able to maintain or transfer attachments to new output dataset

Primary use case: appending new data into a master dataset, attachments from the new data should be included in the master dataset

Uses the **Maintain Attachments** environment setting – default On (turn off for faster processing if you do not wish to transfer attachments)

Tools

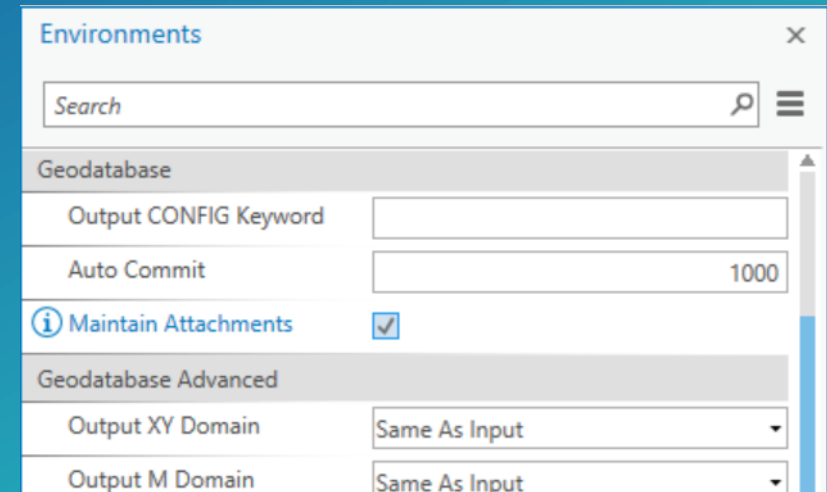

Copy Features and Feature Class To Feature Class

Copy Rows and Table To Table

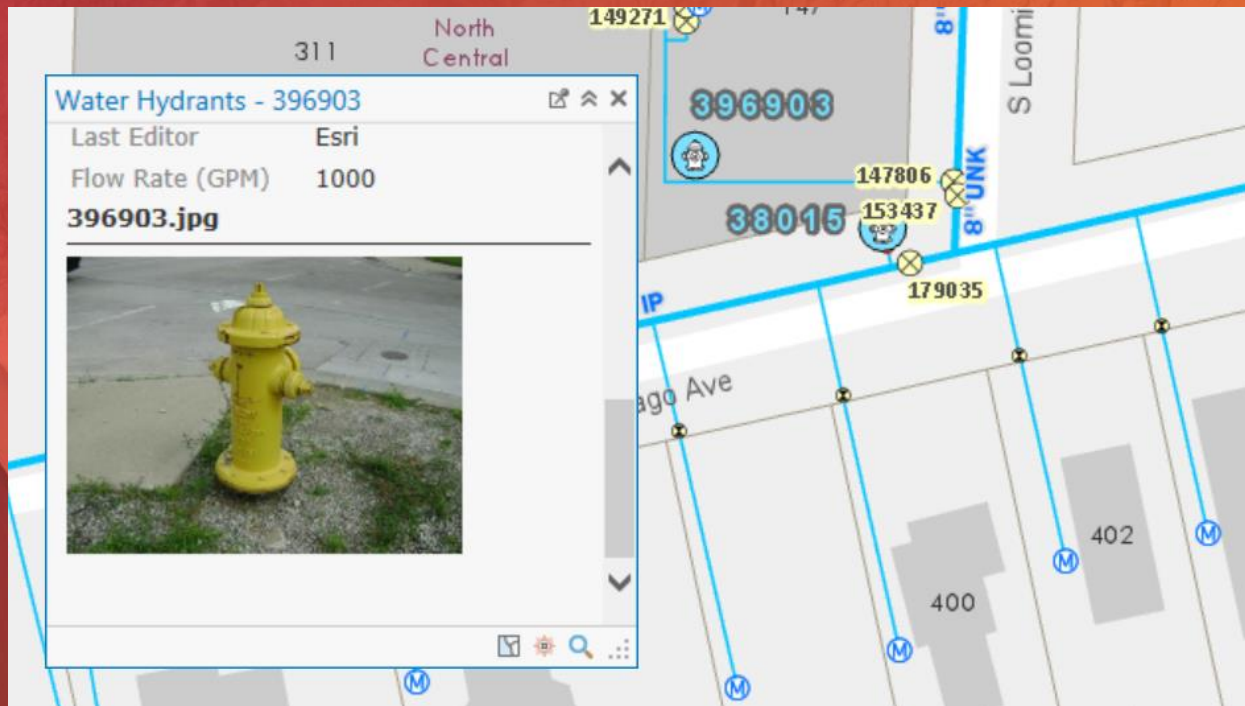

Append

Merge

Copy

If you want to re-project your data with attachments, use Copy Features in conjunction with Output Coordinate System

Demo

Automated attachment workflow
using geoprocessing
