

ArcGIS Pro: Organize Map Assets with Styles

Edie Punt & Chait Gaddam

Organize Map Assets with Styles

In ArcGIS Pro

- **Styles to promote consistency and standardization across maps and layouts**
- **The galleries you see when you author maps and layouts are filled with style items**
- **Styles store:**
 - **symbols**
 - **colors**
 - **color schemes**
 - **label placements**
 - **layout items**

Types of styles

In ArcGIS Pro

- **Project styles:**
 - those referenced by the project
- **Favorites style:**
 - linked to your profile, not the project, always available, not shared
- **System styles:**
 - Esri styles included with ArcGIS Pro download. Add to project, not shared, read-only
- **Custom styles:**
 - any style that is not a system style or your Favorites style, usually writeable
- **Solution styles:**
 - usually Esri-authored, intended for a specific industry or solution, found on ArcGIS Online
- **Mobile styles:**
 - paired down style schema that can be used in mobile applications

Demo

Styles: Tips and Tricks

In ArcGIS Pro

- **Copy symbols from read-only system styles to your own styles**
 - modify as necessary
- **Add styles directly from the Format Symbol pane gallery**
- **Import styles from ArcMap directory**
- **Save colors to Favorites style for consistency**
- **Share styles via portal**
- **Convert representations to ArcGIS Pro symbols by saving them to an ArcMap style**
