

CONFLATION: EDGEMATCHING TOOLS AND WORKFLOWS

DAN LEE

Agenda

Conflation Overview and Geoprocessing Tools

Edge Matching Workflow

➤ **Demo**

Conclusions and Future Work

Conflation Overview and Geoprocessing Tools

When using multi-source spatial data **together**

Common obstacles in analysis and mapping:

- **Spatial and attribute inconsistency** caused by differences in data collection and modeling
- **High cost** to fix the problems

Overlapping datasets

Adjacent datasets

Conflation reconciles multi-source datasets and optimizes data quality and usability

Between overlapping datasets:

- Detect feature changes (differences) through feature matching
- Make spatial adjustment and attribute transfer

Between adjacent datasets:

- Detect and resolve feature conflicts and disconnections through edge matching and alignment

Ultimately:

- Maintain an unified and seamless dataset – enriched and up-to-date
- No longer live with various imperfect datasets
- Rely on the data to perform analysis and quality mapping with confidence

What does it take to achieve the goals?

Our initial focuses

Develop highly automated tools in Geoprocessing framework

- Starting with linear features (roads, parcel lines, rivers, etc.)
- Aiming at high accuracy (not promising 100%)
- Providing information to facilitate post-processing

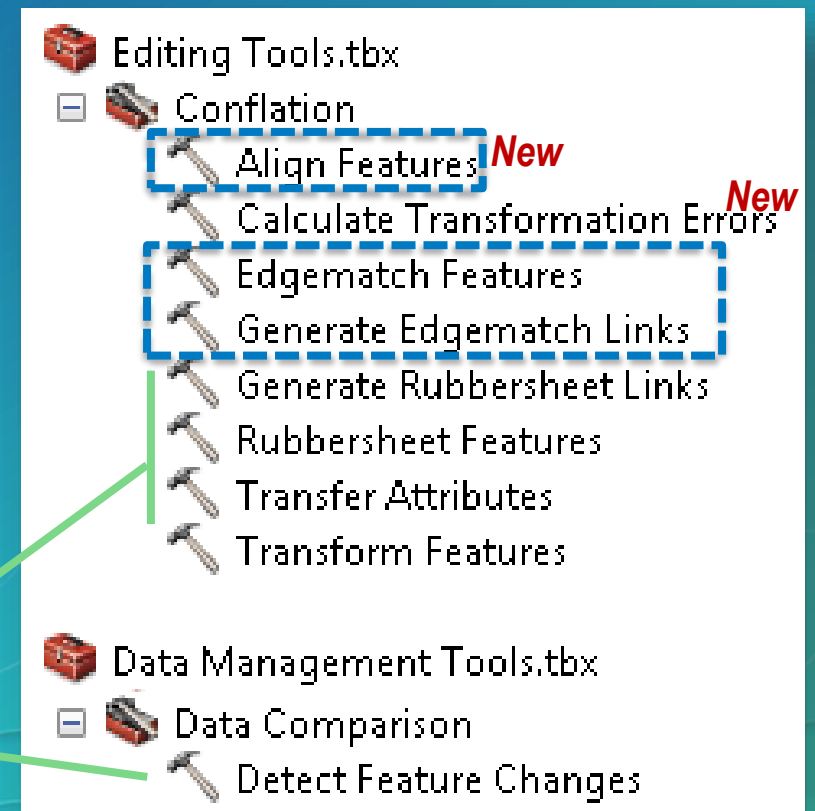

Build workflows

*TW session (01:30pm – 02:45pm, Thursday, Room 31A)
Conflation Tools and Workflows: An Introduction*

Have you used these tools in ArcMap?

In ArcGIS 10.5.1 and Pro 2.0

Edge matching (**EM**) tools for adjacent datasets

Based on proximity, topology, and continuity analysis, as well as attributes information

Generate Edgematch Links (**GEL**)

- From source features to adjacent features

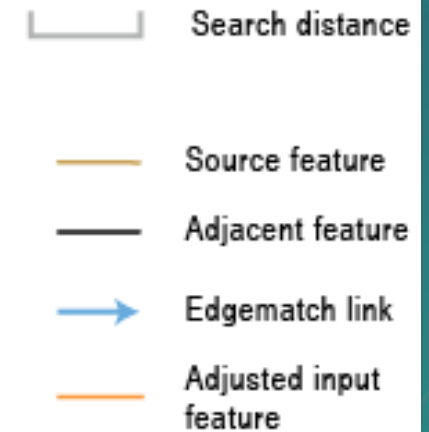

GEL

Followed by Edgematch Features (**EF**)

- Connects features guided by the established links

EF

Options for connecting features

Align Features

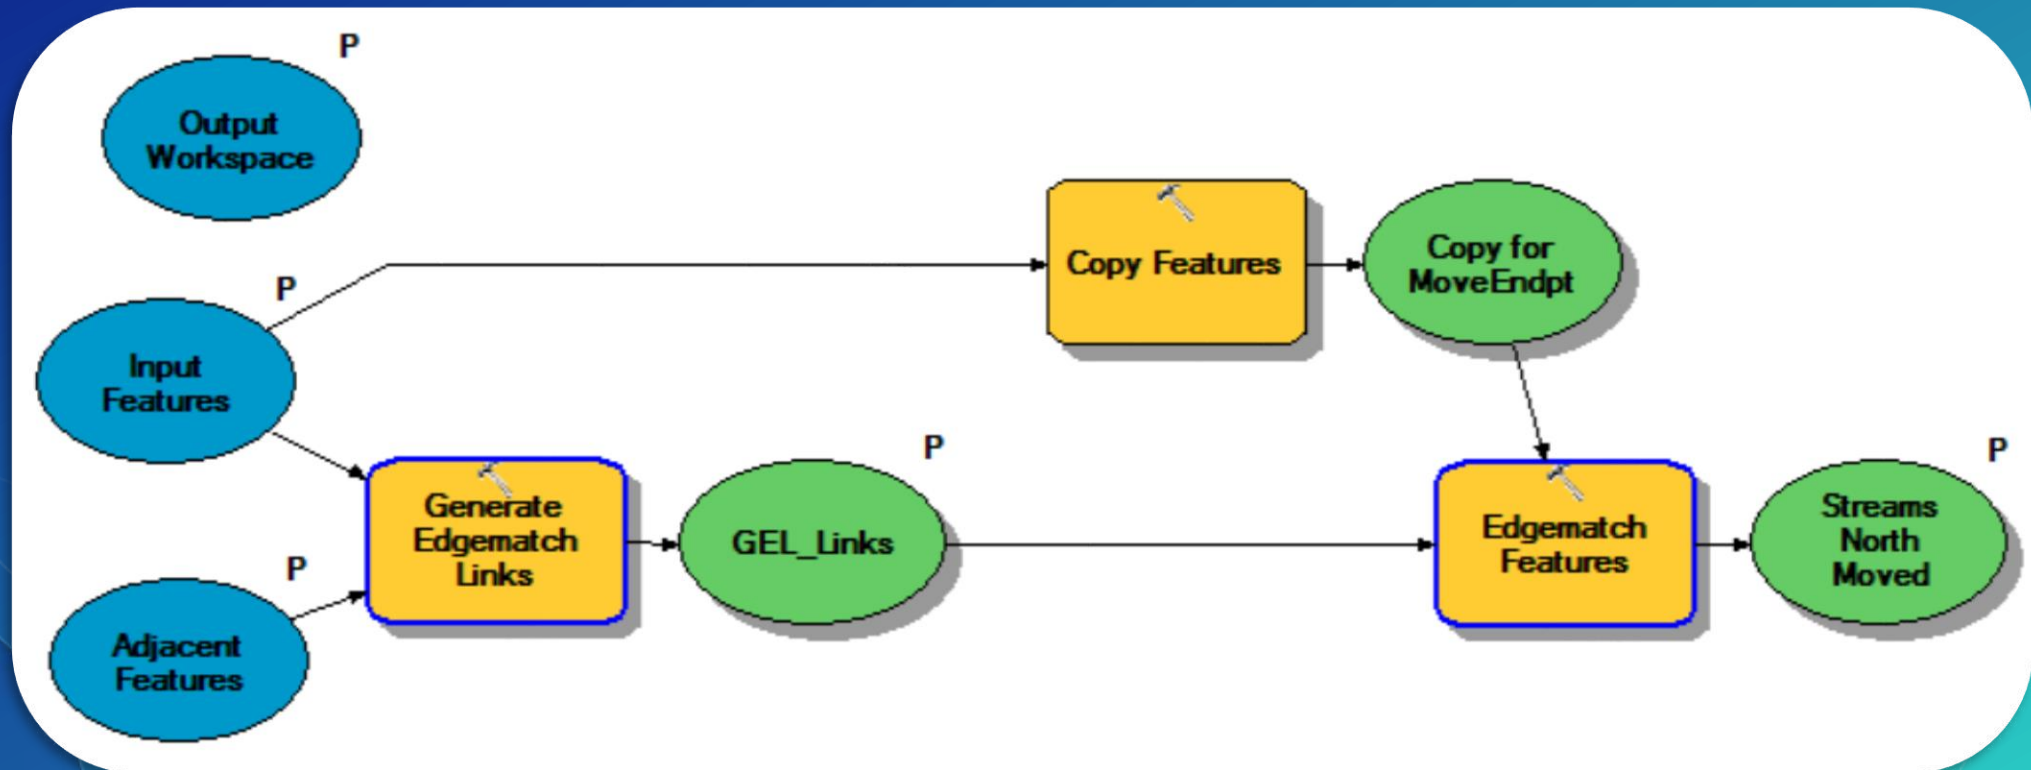

Based on proximity, topology, and similarity analysis, as well as attributes information

Edge Matching Workflows

Conceptual workflow

Example edgematching of adjacent datasets

Goal - make two adjacent datasets properly connect

Source features

Adjacent features

Together

Conflation Workflow Tools.tbx

- Support Tools
 - Check DFC D N NC Types
 - Check Feature Matching
 - Check TA No Value
 - Extract And Classify Feature Vertices
 - Flag Vertex Type Difference on Rubbersheet Links
 - Make Histogram
 - Report DFC Results
- Workflow Steps
 - Step1a DFC and Evaluation
 - Step1b Extract Matched Features
 - Step2 GRL and Evaluation
 - Step3 Rubbersheeting and Assessment
 - Step4 TA and Evaluation
 - Step5 Append N For Final
 - Step6a GEL and Evaluation
 - Step6b Update Link Info
 - Step7 Edgematch

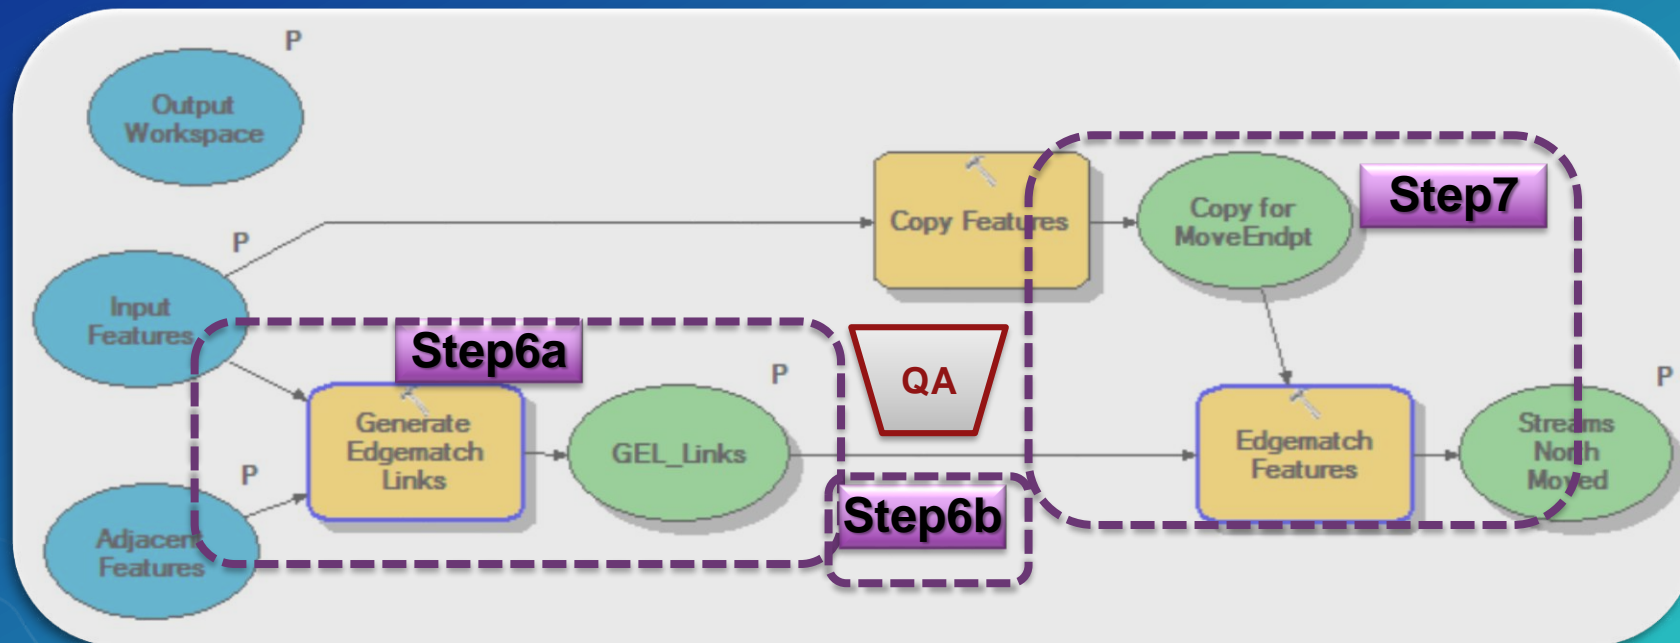

We are improving the add-in toolbar and workflow tools.

Demo: Real world scenario

Workflow strategy

Breakdown of the conceptual workflow into sub-steps

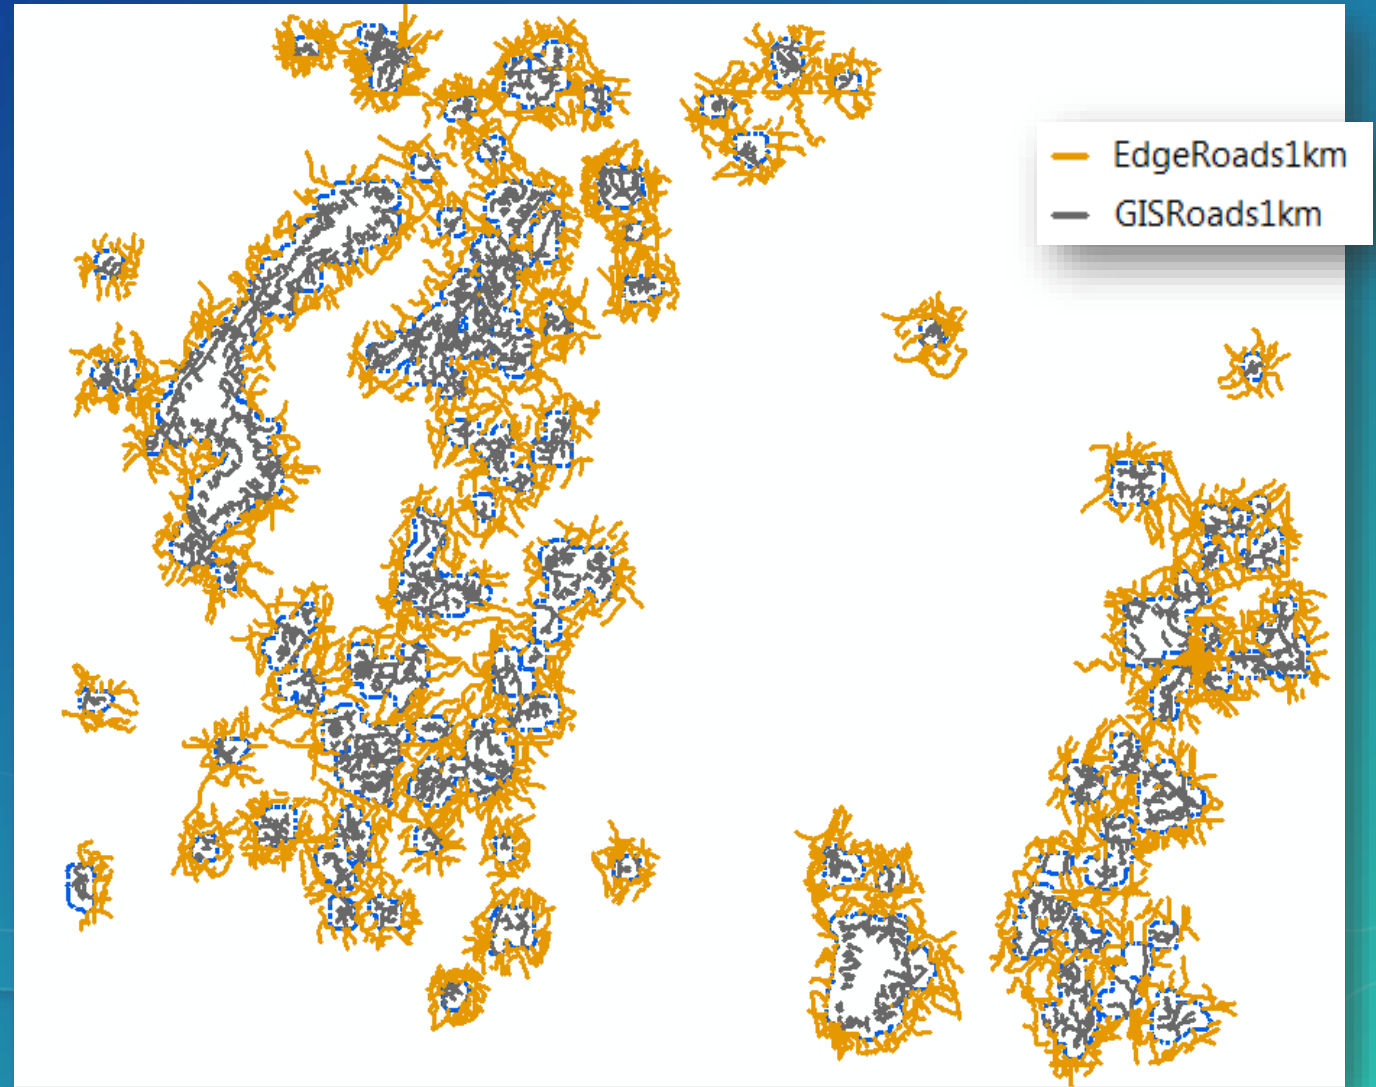

Demo data overview

Two road datasets (an area in Alabama):

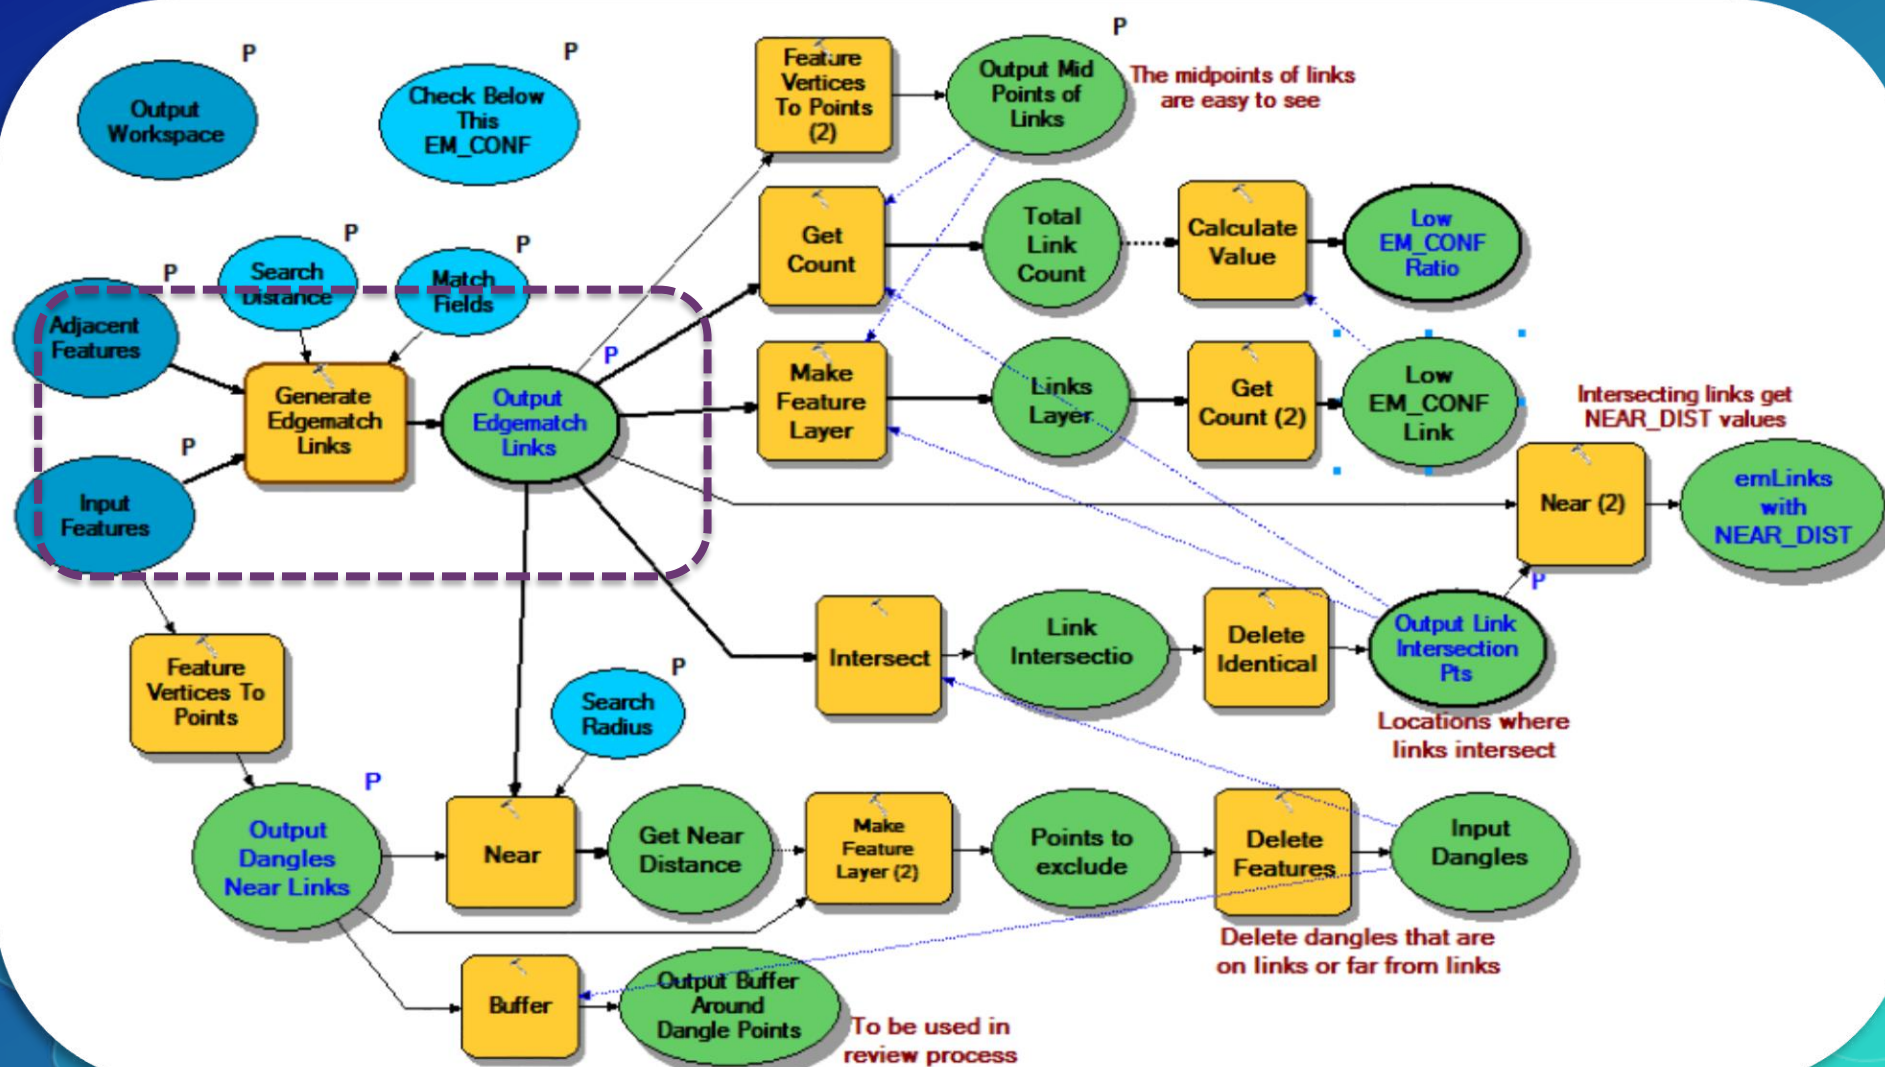

- **EdgeRoads** – 7576 features
- **GISRoads** – 3634 features

Both datasets:

- **Contain roads that are within 1 km to borders**
- **Have inconsistent road names**

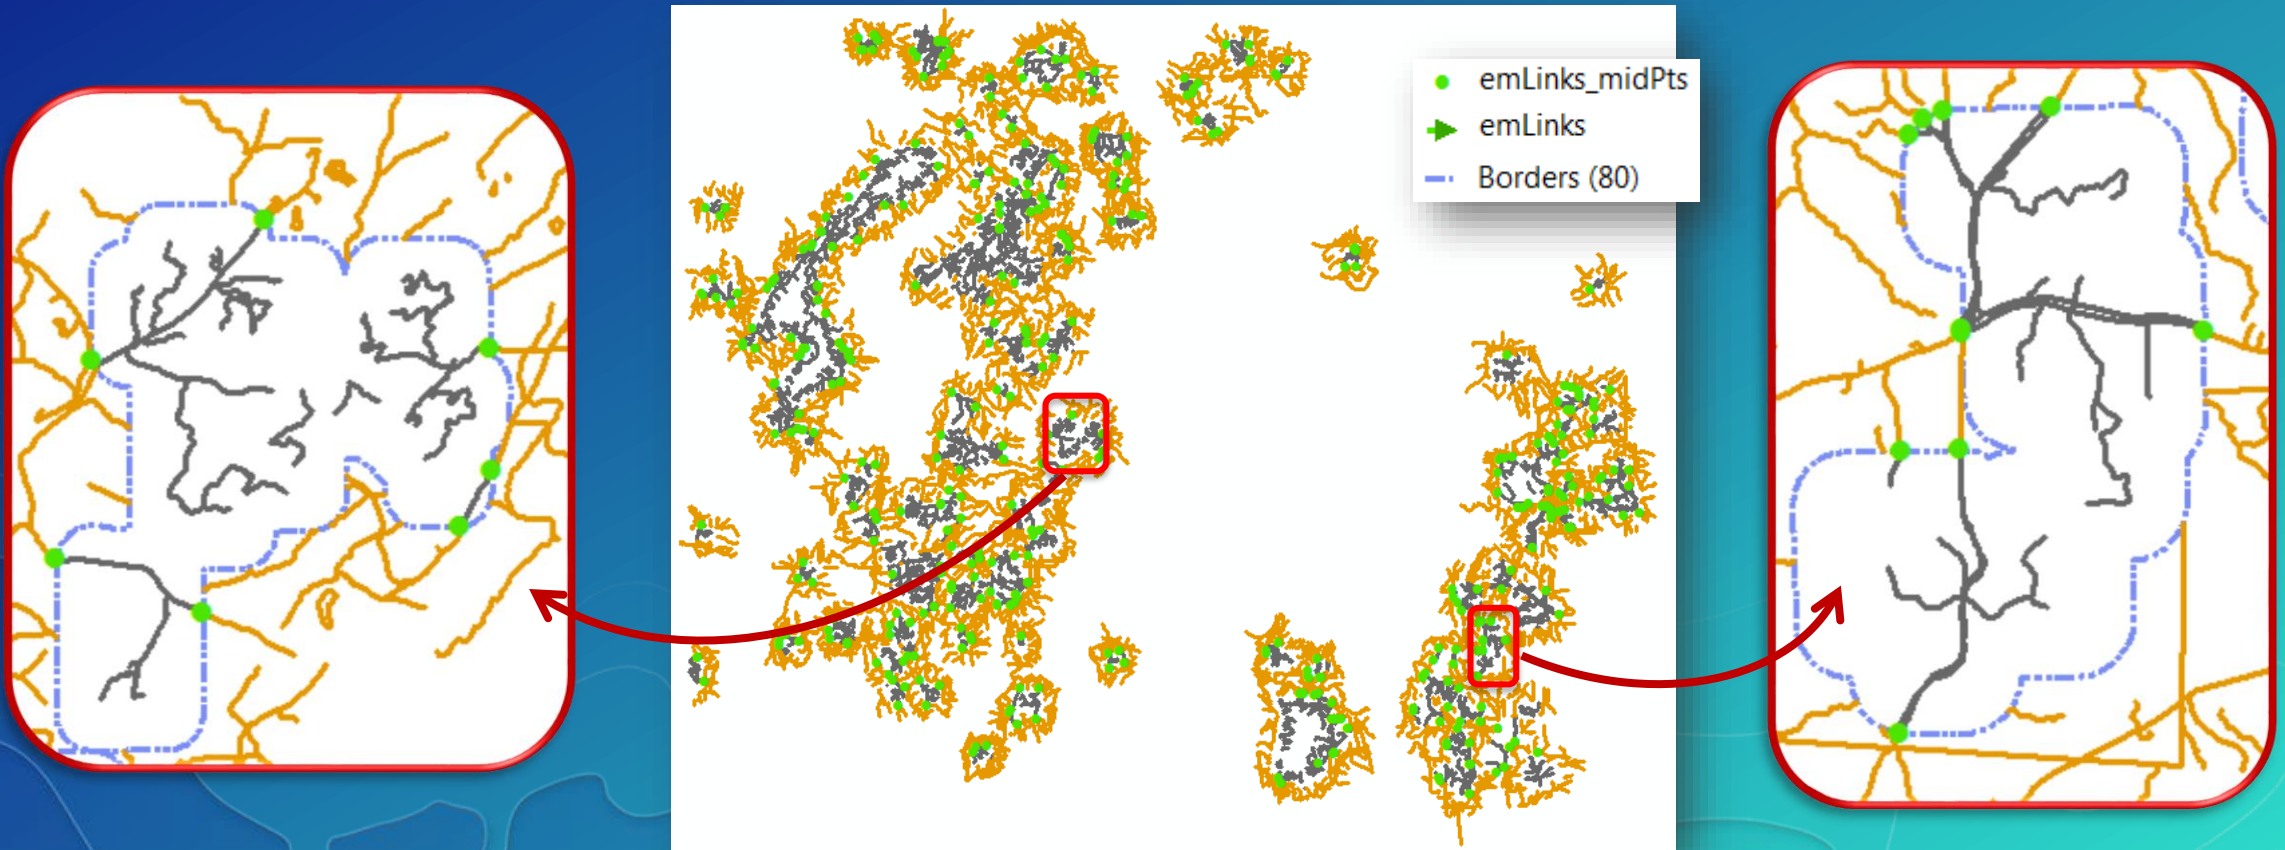

Step6a GEL and Evaluation

GEL result

Generated 454 links; midpoints of links were created for visualization purpose.
Borders were not in the process, but displayed for reference.

EM_CONF in output

- 100 (matched with no ambiguity)
- 50 (spatially matched with unmatched attributes)
- < 50 (spatially matched with some ambiguity and weak continuity)

	OBJECTID *	SHAPE *	SRC_FID	TGT_FID	EM_CONF
	402	Polyline	6763	346	100
	403	Polyline	6768	607	100
	409	Polyline	6854	3047	100
	418	Polyline	6946	2898	100
	421	Polyline	7019	2053	100
	425	Polyline	7148	3343	100
	442	Polyline	7420	2240	100
	450	Polyline	7532	1390	100
	2	Polyline	51	46	50
	3	Polyline	51	42	50
	5	Polyline	207	21	50
	6	Polyline	227	51	50
	7	Polyline	359	1618	50
	10	Polyline	397	890	50
	12	Polyline	404	1366	50

GEL evaluation results

EM_CONF < 33: 134 links

Intersecting links: 33 locations

Potential missing links: 62 source dangle locations

Table

emLinks

	OBJECTID *	SHAPE *	SRC_FID	TGT_FID	EM_CONF	SHAPE_Length	NEAR_FID	NEAR_DIST
	107	Polyline	2093	1444	4	40.738594	19	0.000043

	73	Polyline	1581	3117	50	0.0806	50	0

It's time for inspection ...

Inspection and editing of edgematch links

Reviewed:

- 33 locations of intersecting links
NEAR_DIST >= 0
- 98 low EM_CONF links
(EM_CONF < 33) AND (REV_FLAG IS NULL)
- 62 source dangle locations (near links)

Summary:

- 388 (~85%) of total 459 links were good (54 were flagged for recheck)
- 71 (~15%) of total links were modified, removed, or added

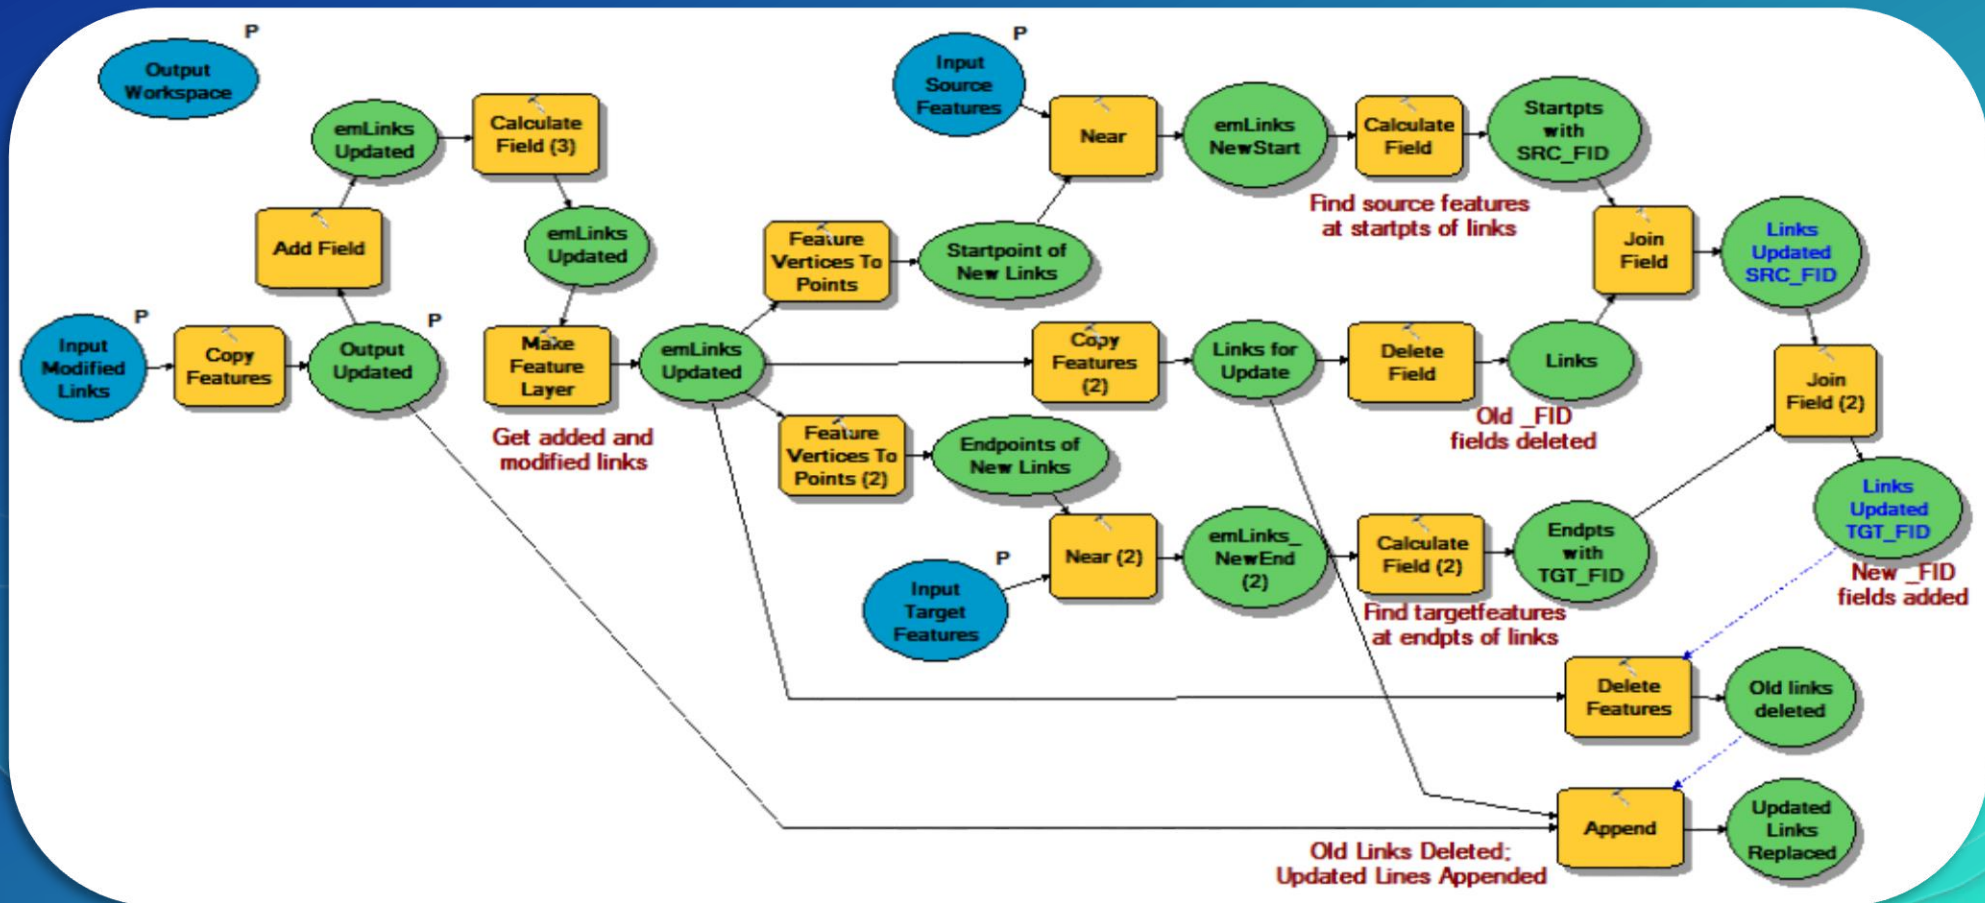

emLinks_freqREVFLAG

	OBJECTID *	FREQUENCY	REV_FLAG
	1	267	<Null>
	2	5	Added
	3	66	Good
	4	46	Modify
	5	55	Recheck
	6	20	Remove

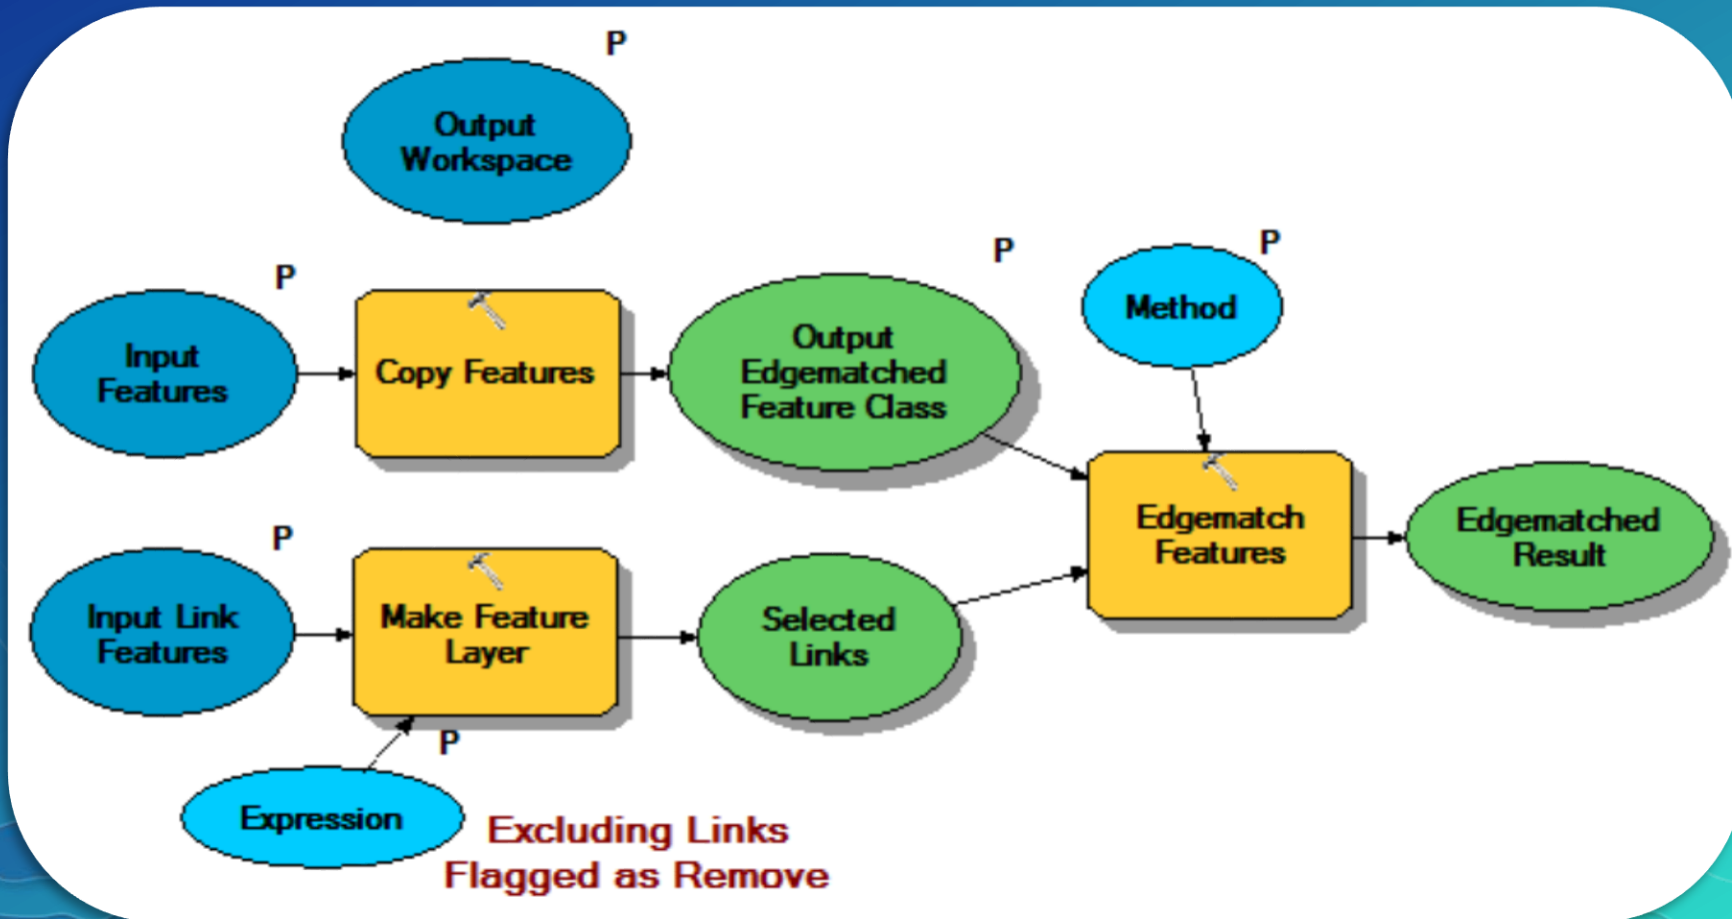

What happened to the SRC_FID and TGT_FID of the added or modified links?

Step6b Update Link Info

Edgematch Features

Edgematch result

Review flagged locations ...

Edgematching of adjacent datasets workflow completed!

***Automated
processing***

	Processing Time
Step 6a	6.52 sec
Step 6b	4.09 sec
Step 6c	2.15 sec
Total	12.76 sec

***Interactive
processing
(not counting
final review)***

	QA Links	Time (2-3 review counts per minute)
Review Count (locations or feature groups)	~ 193	~ 1 - 1.6 hrs.
Edit Count (field values)	192	

Conclusions and Future Work

Thanks to:

- Department of Public Works (DPW), Los Angeles County, USA.
- Resource Management Service, LLC, Birmingham, AL, USA.
- All others who supported us along the way.

Edge matching can be done more efficiently now

It takes a workflow:

- Use the best practice in preprocessing.
- Run automated tools to obtain highly accurate results and evaluation information.
- Interactively review and edit the results. The time is worth-investing.

Consider conflation a higher priority

Study the tools and workflows; understand the results

- **Start with small test areas**

Customize the workflows for your organizations

- **Improve data quality and usability**
- **Bring new life and value to your data**

Work with broader communities

- **Data sharing and collaboration**
- **Seamless analysis and mapping**

*Please send us your feedbacks and
share your stories ... 😊*

Future work

New tools and enhancements

- Split Line By Match tool (for overlapping datasets)
- Better feature matching
- Tools for other feature types

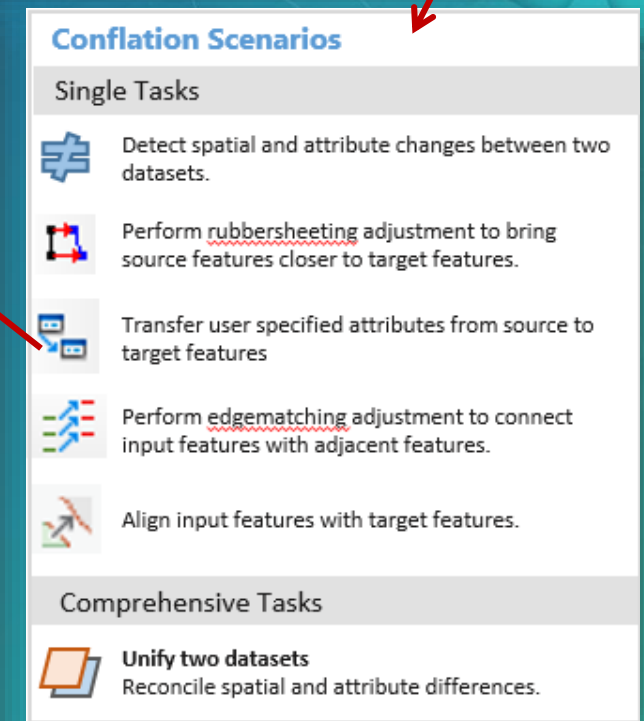

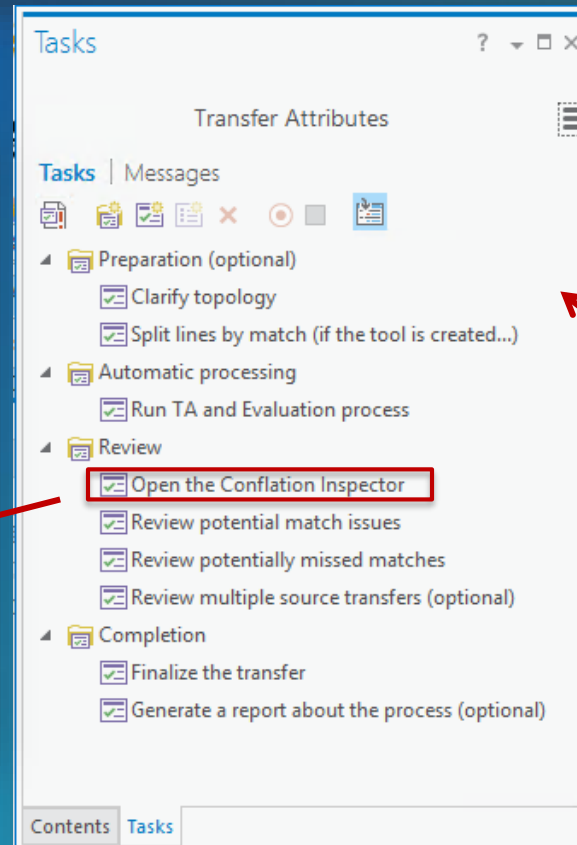

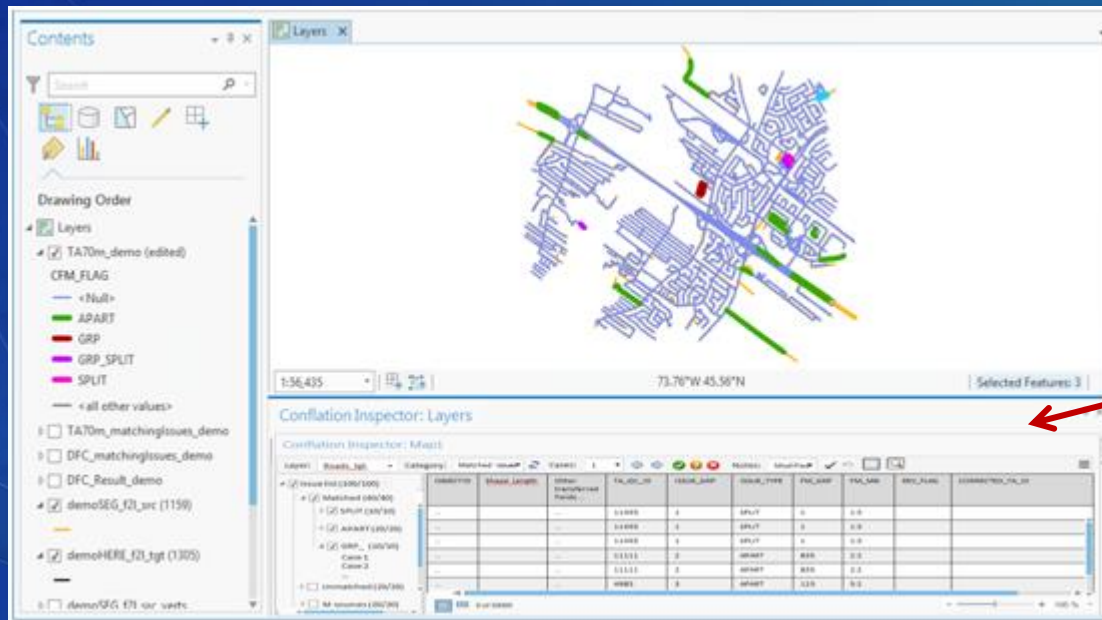

Integrated processing and inspections

- Design of Conflation Manager is underway

Formalization of workflows

- Common scenarios (e.g. multi-scale data updating, linking buildings of different scale)
- Incorporation of other data sources (imagery, lidar, GPS)
- Contextual conflation (spatially related features)

Conflation Manager (ConfMgr)

Conflation in multi-scale data updating and mapping

DLM – digital landscape model; DCM – digital cartographic model
