

Working with Printing Service: Advanced Topics

JEFF MOULDS
TANU HOQUE

Session outline

Subhead Here

- **What** is printing service and **how** it works?
- Use **secured** services with printing service
- **ArcPy** based printing solutions

Why do we need a Printing Service?

Subhead Here

- Create a printable document (PDF, PNG etc.)
- Higher DPI
- Large format plot
- Map surrounds (title, scale bar, legends etc.)

What is Printing Service?

Where can I find one?

What?

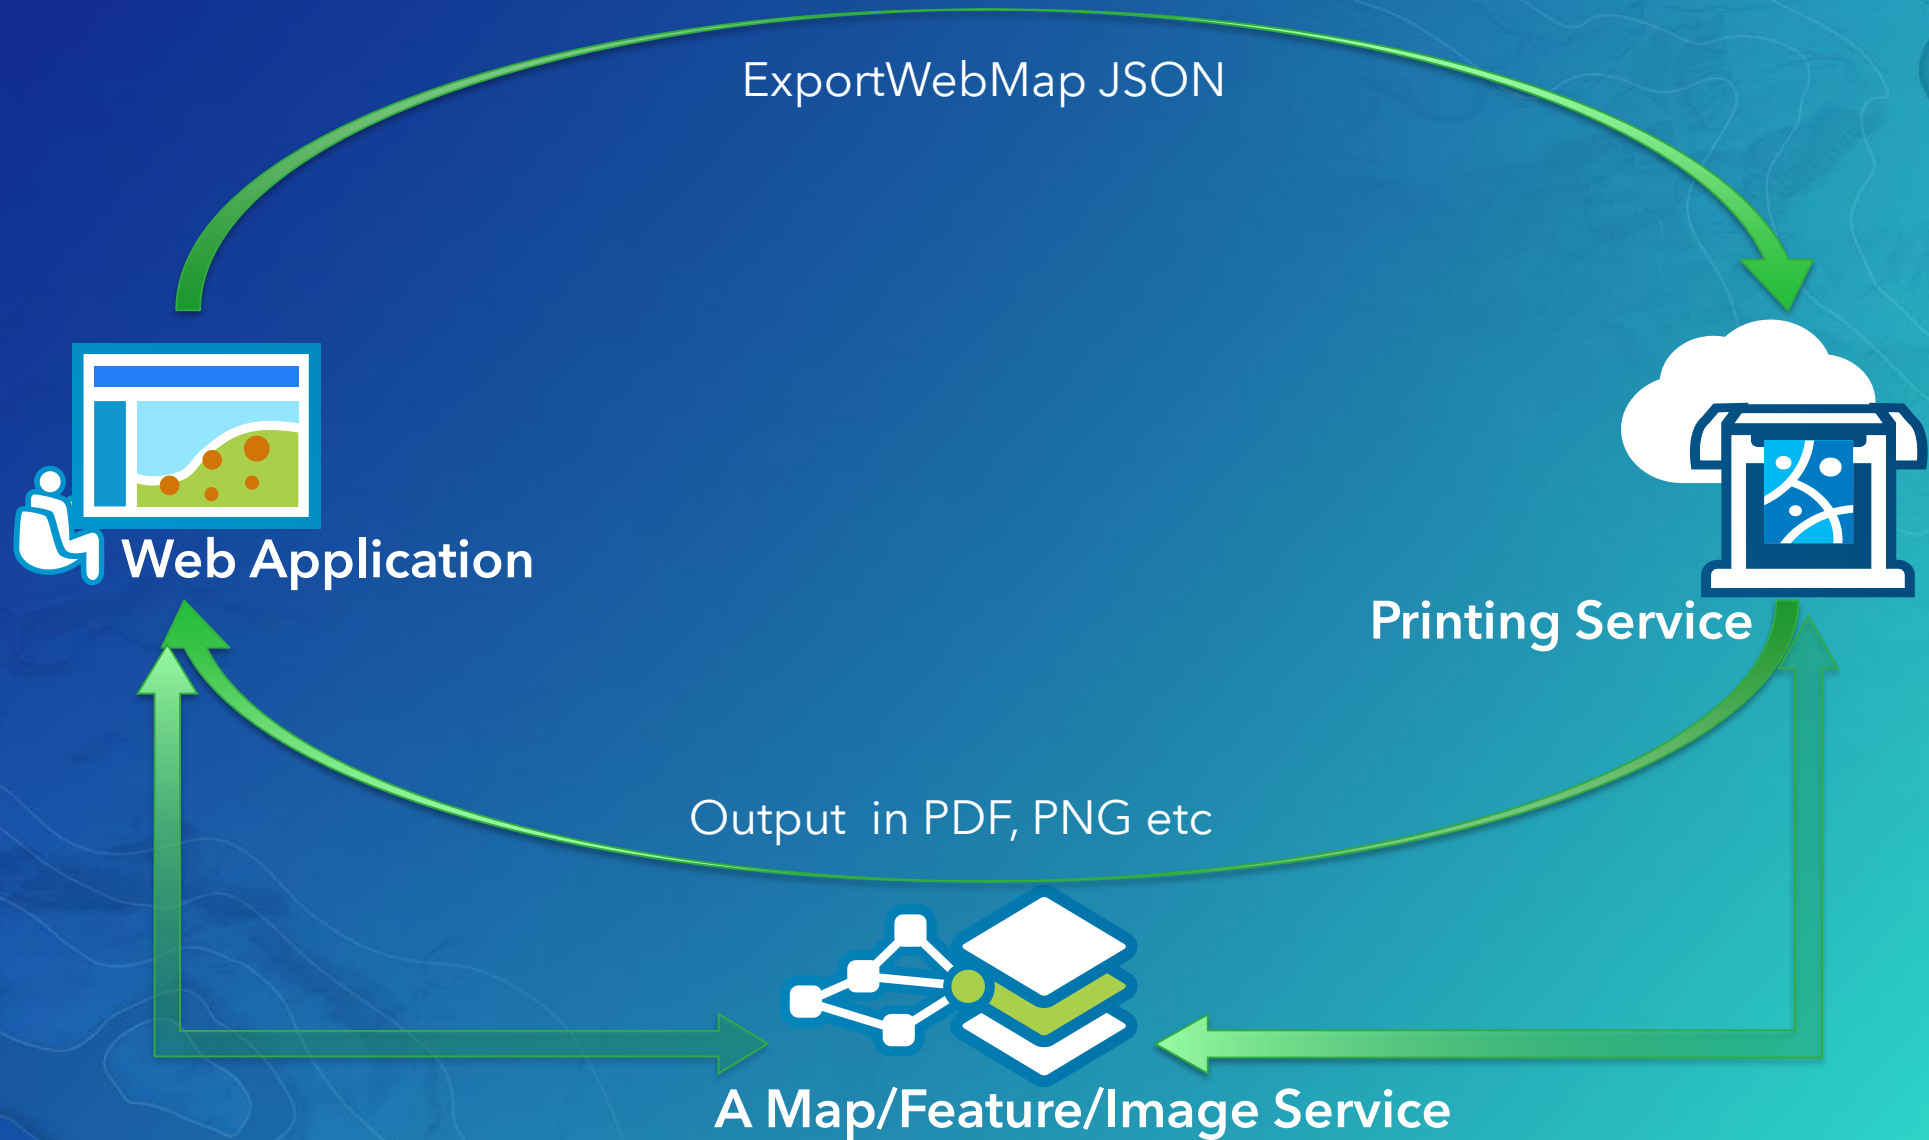

- It is a Geoprocessing Service

Where?

- ArcGIS Online Printing Service
- Out of the box Printing Service comes with ArcGIS Enterprise install
- Your own printing service using Export Web Map tool
 - with your own templates

Printing Service – how does it work?

ExportWebMap JSON

Where can I find one?

description of the map

content of the map

description of the output

description of the layout

```
1  {
2    "mapOptions": {
3      "extent": { },
4      "spatialReference": { },
5      "scale": 18489297.737236
6    },
7    "operationalLayers": [
8      {
9        "id": "World_Dark_Gray_Reference_8618",
10       "title": "World Dark Gray Reference",
11       "url": "http://services.arcgisonline.com/arcgis/re
12     },
13   ],
14   "exportOptions": {
15     "outputSize": [670, 500],
16     "dpi": 96
17   },
18   "layoutOptions": {
19     "titleText": "USA Census Map",
20     "scaleBarOptions": { },
21     "legendOptions": {
22       "operationalLayers": [{"id": "Census_3920"}]
23     }
24   }
25 }
```

Security

Print web map containing secured services

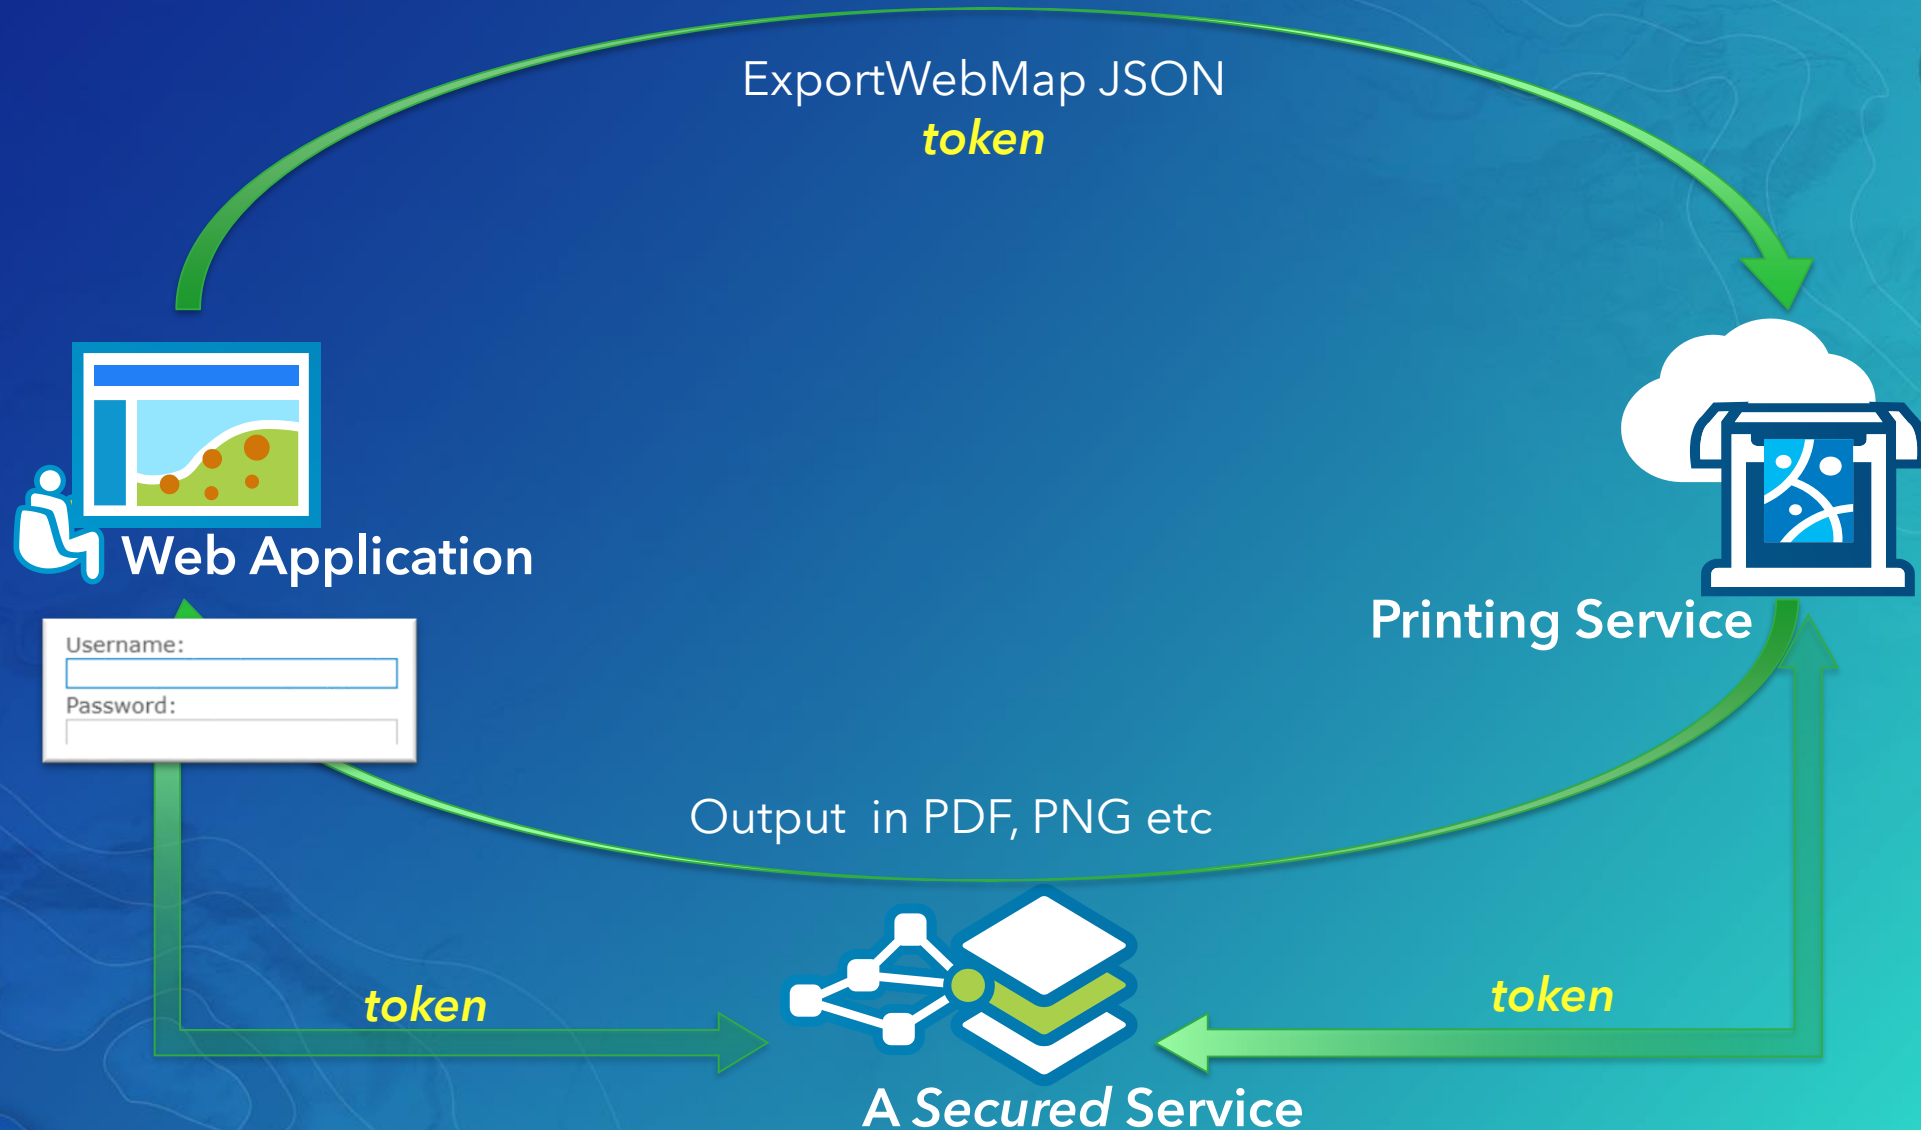

Can I Use Secured Services with Printing Service?

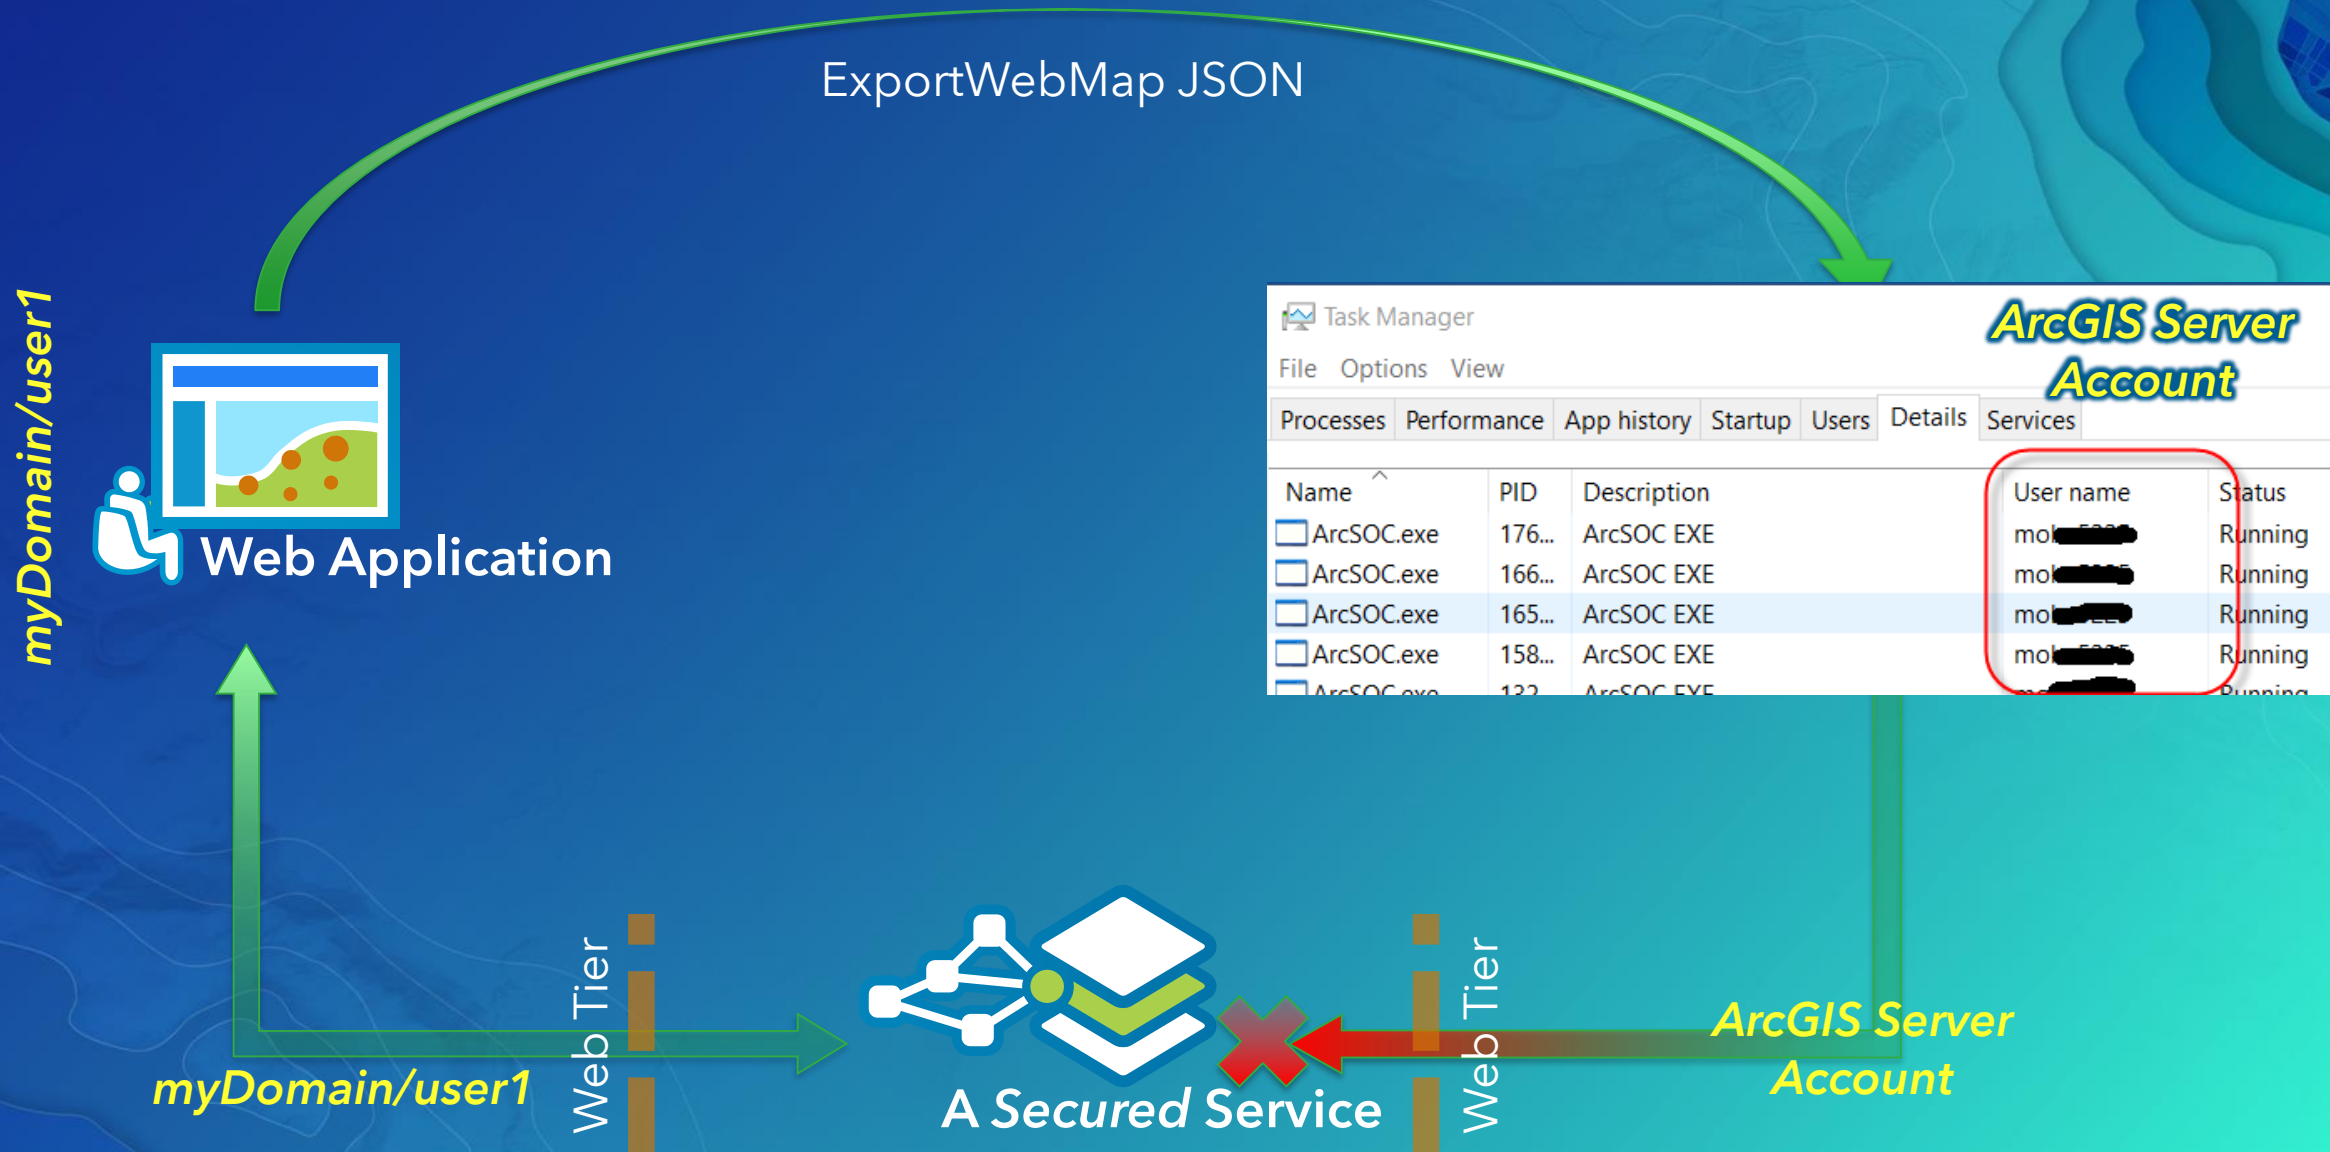

Where can I find one?

- Secured Services are supported
 - Short term **token** (optionally with **referrer**)
- **Web tier level** security supported when server is **federated** to a portal
 - e.g. Windows Integrated Authentication

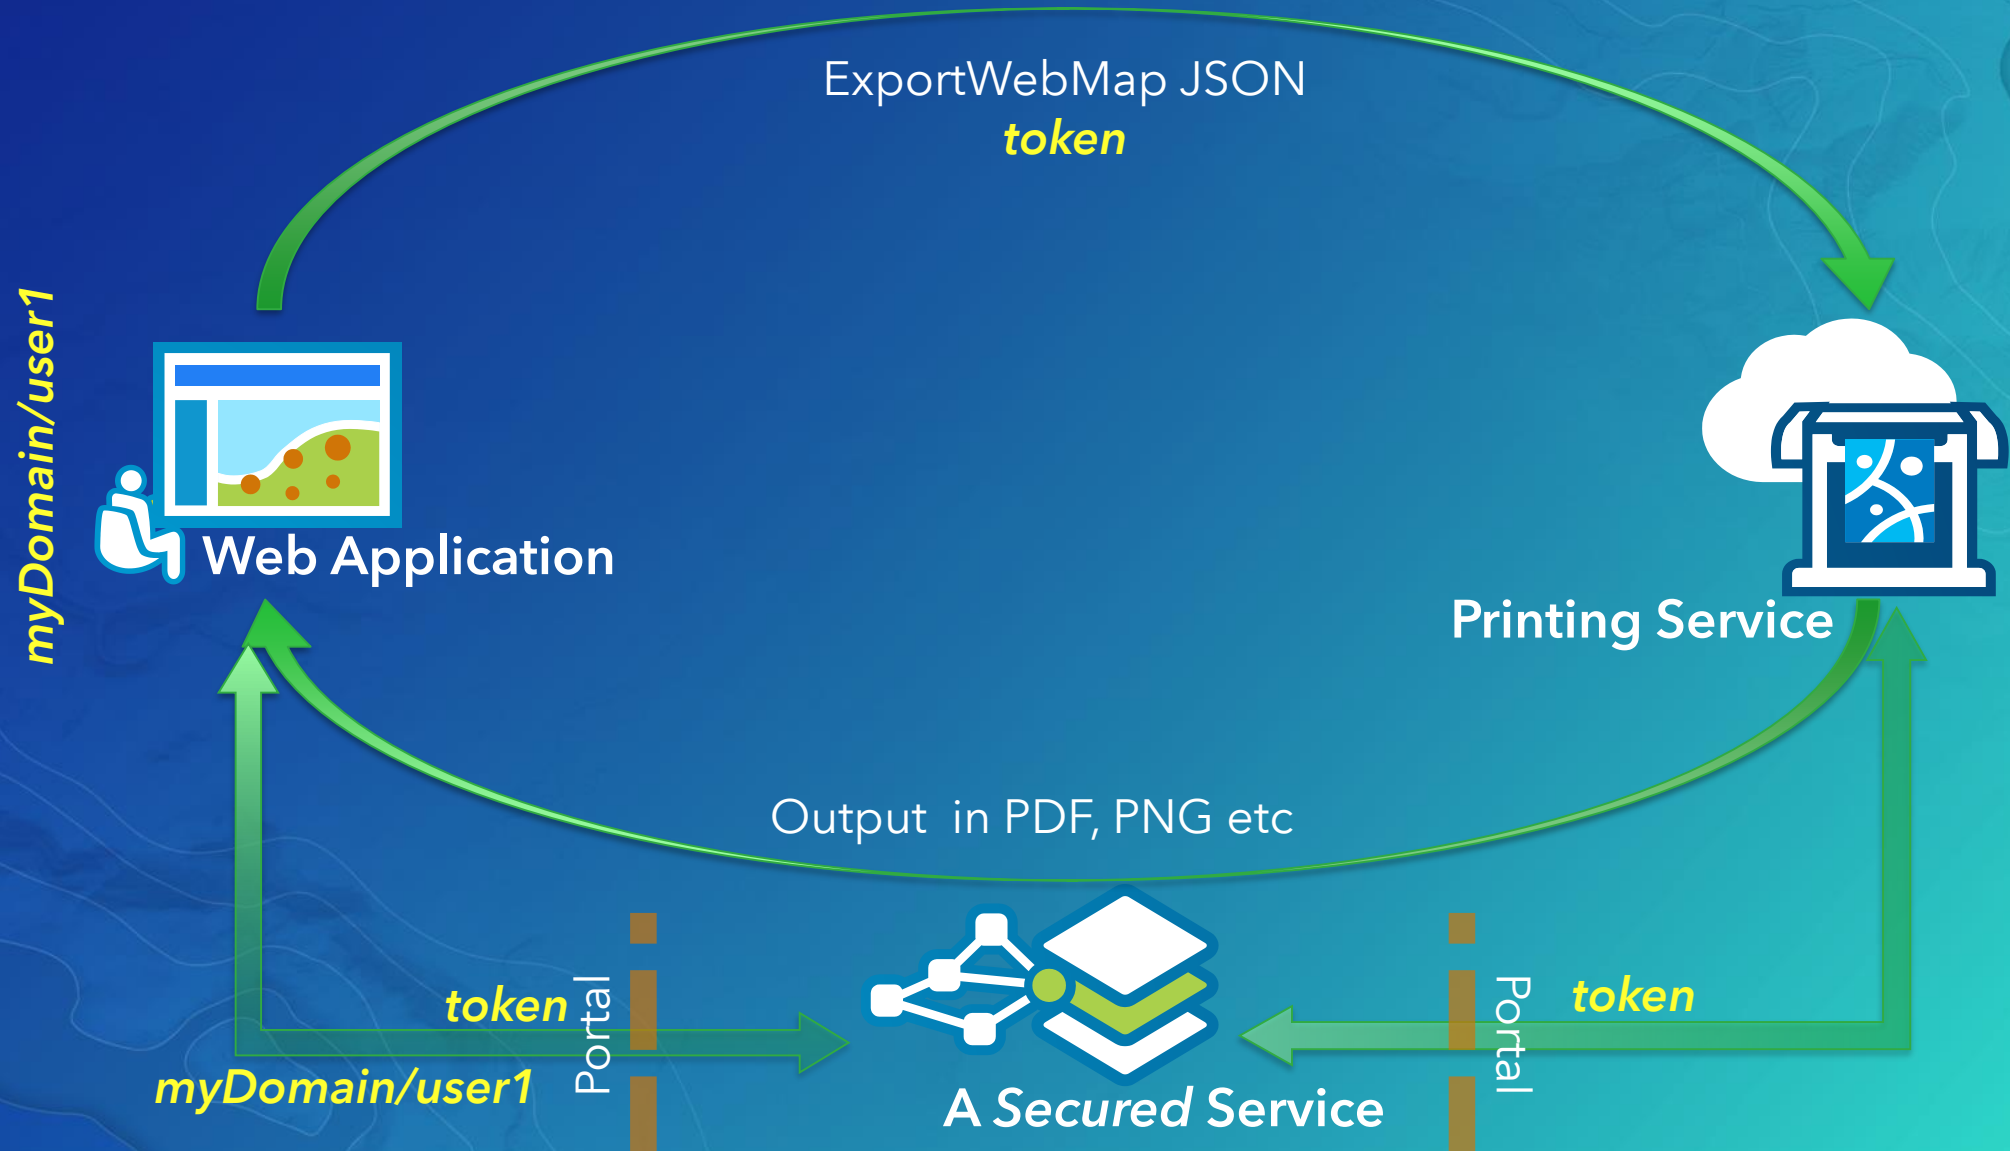

Printing Service – how does it work with secured services?

Printing Service – Web Tier Security

Printing Service – Web Tier Security and Portal

ArcPy based Printing Service

Jeff Moulds

Advanced Web Map Printing with Python

Web API /
Web AppBuilder

`arcpy.mapping`

High quality vector
output (e.g. PDF)

Advanced server printing with arcpy.mapping

- Full capabilities of arcpy.mapping:
 - Swap out service layers for local vector data for vector PDF output
 - Export using advanced options
 - Export data driven pages
 - Export to PDF and insert additional pages (title page, reports, etc.)
 - Controlling the appearance of the legend
 - Etc.
- Return a printer-friendly output file (PDF, PNG, etc.)

Advanced server printing with arcpy.mapping

- Build web apps with customized versions of the out-of-the-box print service

- Arcpy.mapping method for converting Web Maps to Map Documents:
 - `ConvertWebMapToMapDocument (webmap_json, {template_mxd}, {notes_gdb}, {extra_conversion_options})`

Online help and examples <http://esriurl.com/4600>

Demo: Web app to export vector PDF using arcpy.mapping

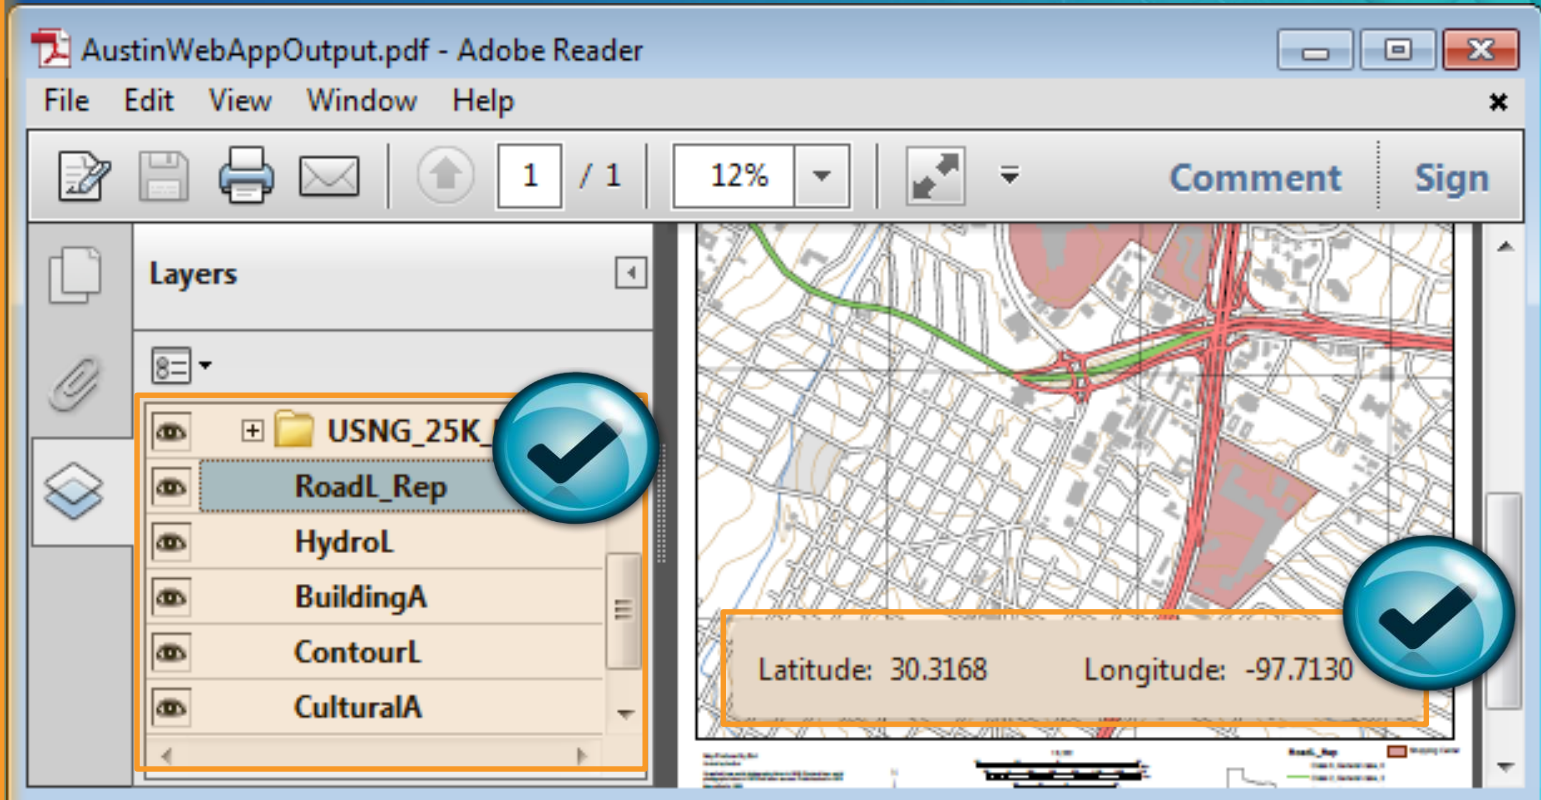

- Output or print vector layers instead of “flat” image of service layers
 - Vector layers will be staged in template map document

Output PDF viewed in Adobe Reader:

Map service tiled cache (low dpi)

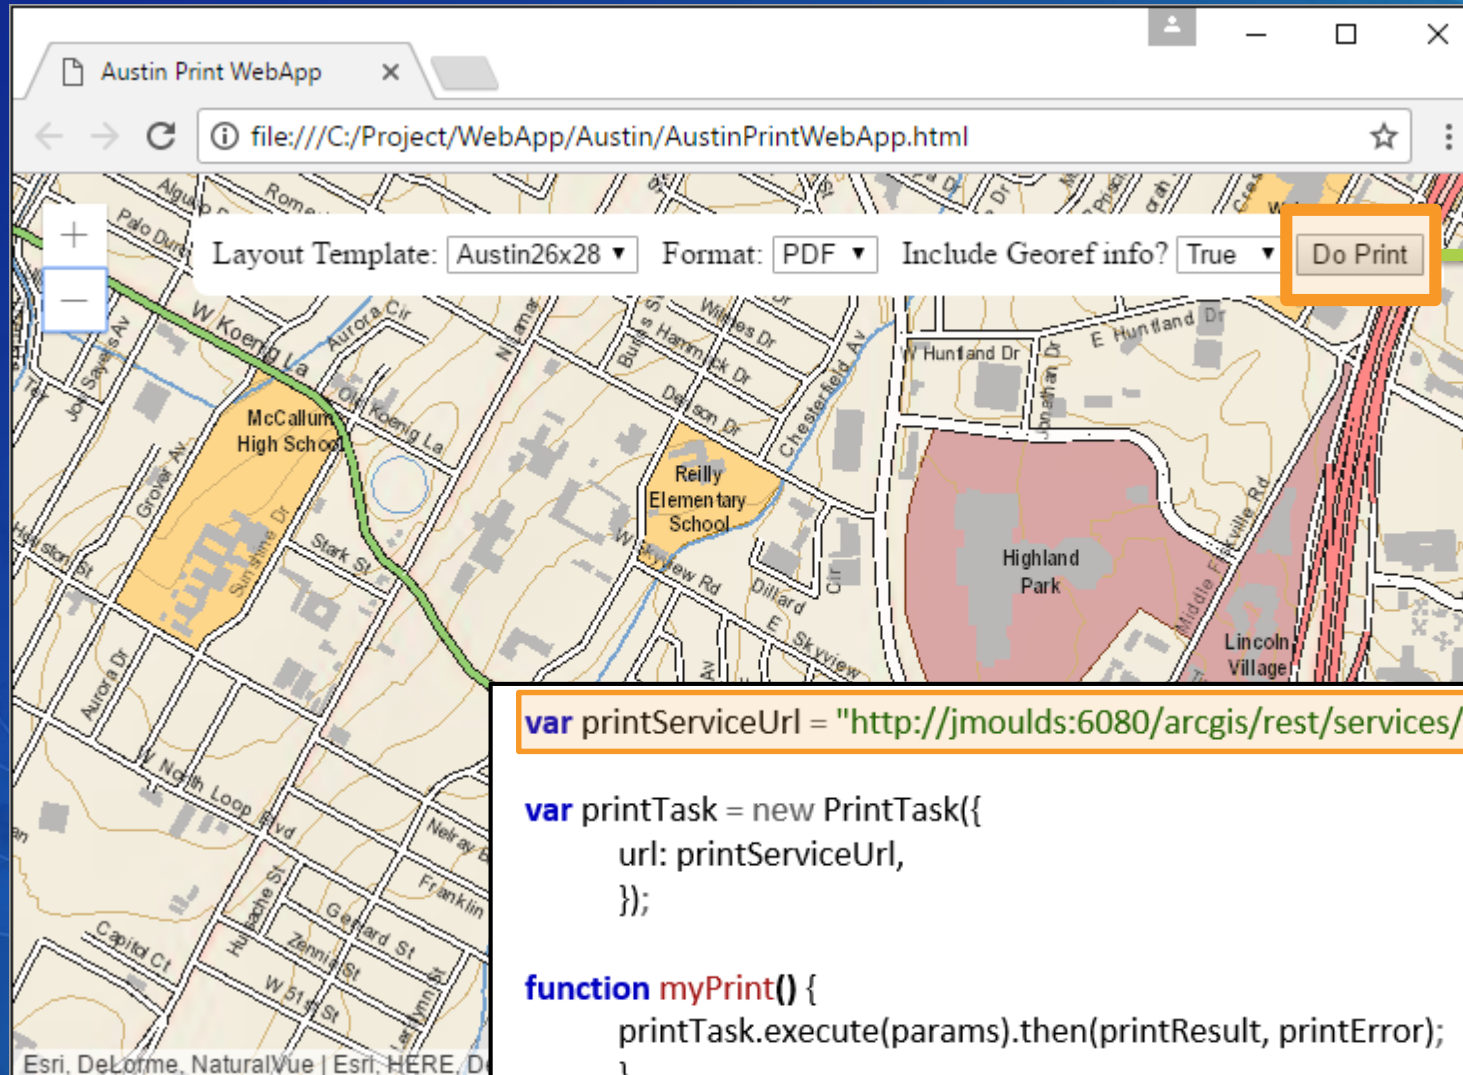

Vector data (or high dpi image)

Demo: Web app to export vector PDF using arcpy.mapping

- Reference the arcpy.mapping GP service in JavaScript API

```
var printServiceUrl = "http://j moulds:6080/arccgis/rest/services/Austin/AustinPrint/GPService/AustinPrint";

var printTask = new PrintTask({
  url: printServiceUrl,
});

function myPrint() {
  printTask.execute(params).then(printResult, printError);
}
```

Demo: Web app to export vector PDF using arcpy.mapping

Python code used in custom GP service

Get web map JSON

```
1 # Parameter 0: Input WebMap json
2 Web_Map_as_JSON = arcpy.GetParameterAsText(0)
```

Get output format (e.g. PDF)

```
4 # Parameter 1: Format for output
5 Format = arcpy.GetParameterAsText(1)
```

Get template MXD

```
7 # Parameter 2: Input Layout template
8 Layout_Template = arcpy.GetParameterAsText(2)
9 dataStorePath = u'//j moulds/Austin/Templates'
10 templateMxd = os.path.join(dataStorePath, Layout_Template + '.mxd')
```

Get extra parameter
(Georeferencing Info)

```
12 # Extra parameter 3: Georeferencing boolean
13 Georef_info = arcpy.GetParameterAsText(3)
```

Create new MXD based on
web map

```
15 # Convert the WebMap to a map document
16 result = arcpy.mapping.ConvertWebMapToMapDocument(Web_Map_as_JSON, templateMxd)
17 mxd = result.mapDocument
18 df = arcpy.mapping.ListDataFrames(mxd, 'Webmap')[0]
```

Remove service layers

```
20 # Remove the service layer
21 # This will just leave the vector layers from the template
22 for lyr in arcpy.mapping.ListLayers(mxd, data_frame=df):
23     if lyr.isServiceLayer:
24         arcpy.mapping.RemoveLayer(df, lyr)
```

Export to PDF or PNG

```
26 # Use the uuid module to generate a GUID as part of the output name
27 output = 'WebMap_{}.{}'.format(str(uuid.uuid1()), Format)
28 Output_File = os.path.join(arcpy.env.scratchFolder, output)
29
30 # Export the WebMap
31 if Format.lower() == 'pdf':
32     arcpy.mapping.ExportToPDF(mxd, Output_File, georef_info=Georef_info_bol)
33 elif Format.lower() == 'png':
34     arcpy.mapping.ExportToPNG(mxd, Output_File, transparent_color='255, 255, 255')
```

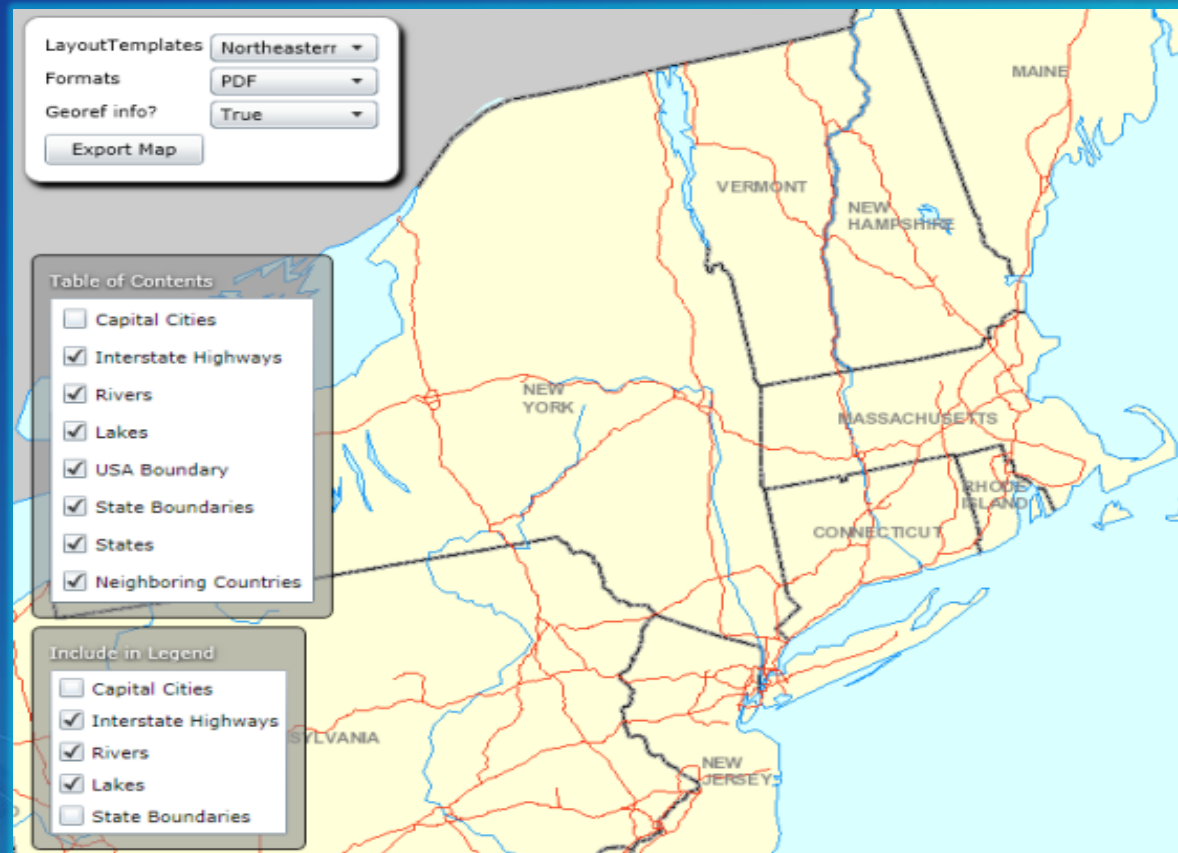

Output file of job

```
36 # Set the output parameter to be the output file of the server job
37 arcpy.SetParameterAsText(4, Output_File)
```

Web app to export vector PDF using arcpy.mapping

- Two tutorials in the help:

- Basic vector web map printing: <http://esriurl.com/4601>
- Advanced web map printing: <http://esriurl.com/4602>

ArcPy – how to add a photo with my parcel map?

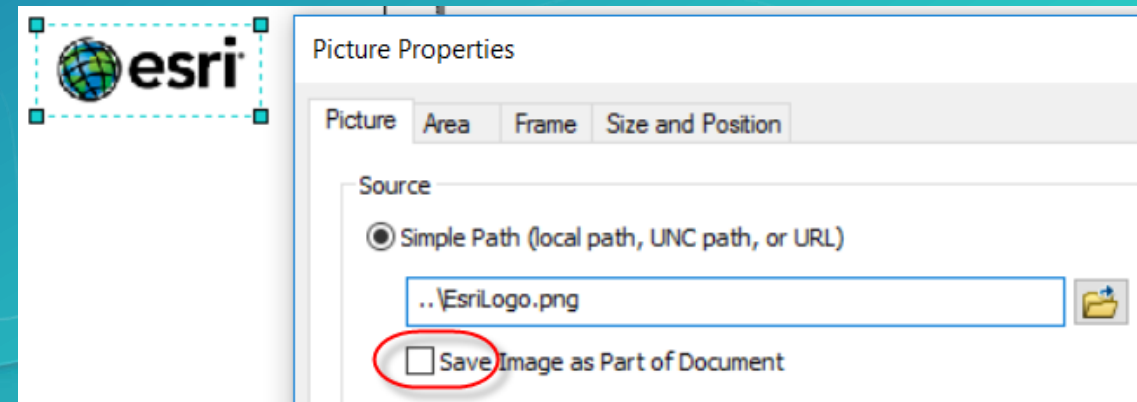

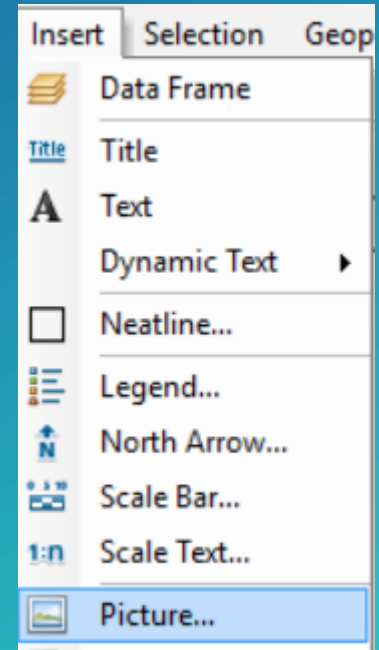

- Author the layout template with a picture element
 - Insert a Picture Element
 - Do not save it as part of the document
- Update its source using arcpy function

#get a reference to the first picture element on the layout

```
pictElm = arcpy.mapping.ListLayoutElements(m, "PICTURE_ELEMENT")[0]
```

#updating the source image of the picture element

```
pictElm.sourceImage = r"E:\MyPhotos\parcel_photo.jpg"
```

ArcPy – Access Feature Attributes from a ExportWebMap JSON?

Python code

```
import json
js = json.loads(ExportWebMap_as_JSON)
olysrs = js["operationalLayers"]
ol = olyrs[2]
fcol = ol["featureCollection"]
lyrs = fcol["layers"]
lyr = lyrs[0]
fset = lyr["featureSet"]
fs = fset["features"]
f = fs[0]
attr = f["attributes"]
print attr["STATE_NAME"]
```

Structure of featureCollection in a ExportWebMap JSON

```
"operationalLayers": [
  {...},
  {...},
  {
    "id": "displayLayer_of_Census_3920_3",
    "featureCollection": {
      "layers": [
        {
          "layerDefinition": {
            "name": "polygonLayer",
            "geometryType": "esriGeometryPolygon"
          },
          "featureSet": {
            "geometryType": "esriGeometryPolygon",
            "features": [{
              "geometry": { ... },
              "attributes": {
                "OBJECTID": 39,
                "STATE_NAME": "North Carolina",
                "STATE_FIPS": "37",
```

ArcPy based Printing Service to Print Popups

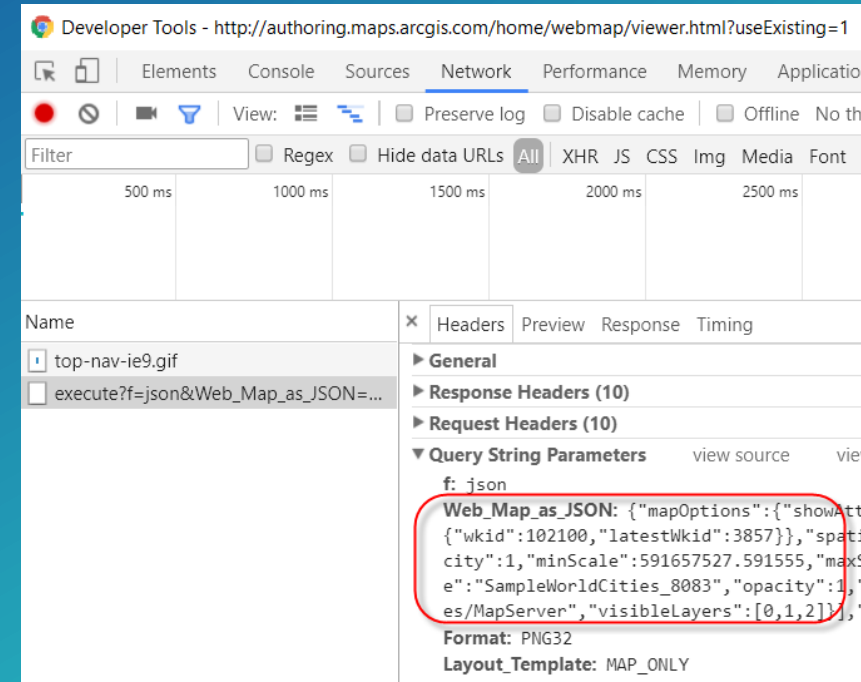

- Client App to pass in popup information (aka feature attributes) in featureCollection
 - e.g. you can use "Select" widget in a Web Application Builder app to select and highlight features
 - that gets passed featureCollection layer in the ExportWebMap_as_Json to a printing service
- ArcPy code reads those attributes
 - and update the value, of an existing 'Text Element' on a layout template
- Blog post: <http://esriurl.com/12303>

ArcPy – helps with debugging

- Extract ExportWebMap_as_JSON using web browser's developer tool
- Convert that to MXD using arcpy functions in ArcMap's Python window
 - `result = arcpy.mapping.ConvertWebMapToMapDocument(exportWebMap_json)`
 - `print result.mapDocument.filePath`

Note: pass in a path of a FileGeodatabase as a value for {notes_gdb} parameter, if your webmap contains featureCollections (aka client side graphic layers)

- Open the map document in ArcMap

Summary

Subhead Here

- Printing service is a **Geoprocessing** service
 - ArcGIS Online's printing service
 - Printing service comes with ArcGIS Enterprise install
 - Your own printing service
- Printing service only support **token** based security
 - ArcGIS Server needs to be federated with a port for web tier level security
- **ArcPy** based printing solutions
 - Create and publish a printing service based on arcpy script
 - Output containing vector features
 - Adding parcel photos
 - Popup printing
 - Debug
