

# 3D Cartographic Techniques

Nathan Shephard and Kenneth Field

# Why create 3D views?

**“It’s cool, man!”**

*Which really means...*

- See vertically stacked content
- Show data in an easy-to-understand form
- Invite imagination and understanding

**3D is *how humans see the world***

Rhodes, Greece  
Konrad Grünenberg (1487)

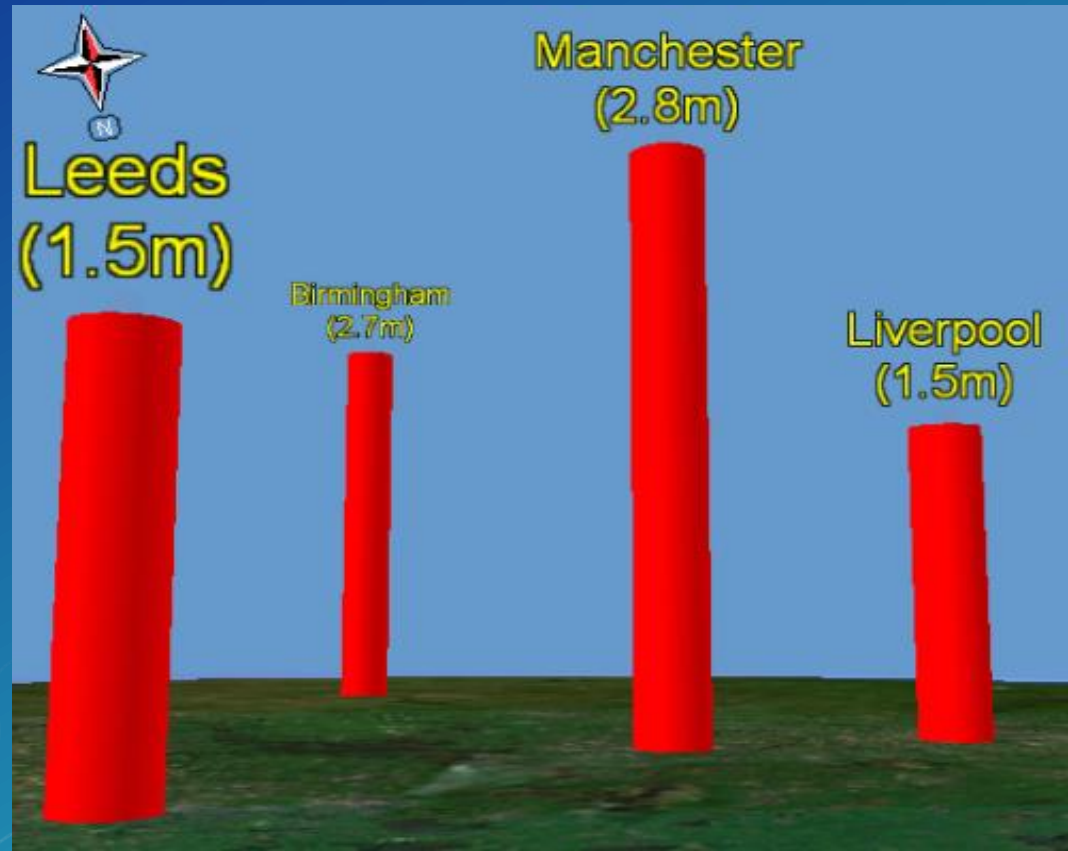

“Along the River”  
Keifeng, China  
Zhang Zeduan (1084-1145)

# Classic first attempt at 3D symbology...

## Population sticks

- *Manchester* : 2.8m
- *Birmingham* : 2.7m
- *Liverpool* : 1.5m
- *Leeds* : 1.5m

~~No useful information~~

~~Bad information~~

Labels

Real-world size symbols

← Use a isometric / axonometric view

# 3D View: **Four Main Elements**

## **Surfaces**

- A ground (primary) surface
- Plus optional other surfaces

## **Textures**

- The “cover” on top of the surfaces  
(eg: aerial imagery, cartographic maps, etc)

## **Features**

- That live on / relative-to the ground
- That know their own absolute z's

## **Marginalia and effects**

- Reference aids (eg: north arrow, TOC, ...)
- Atmospheric effects (eg: lighting, fog, rain, ...)

# Styles of Scenes

Photo-realistic  
(Real-World)

Cartographic  
(Representative)

Augmented Reality

# Photo-realistic Scenes

For 3D cartographers...

...they're kind of boring

...it's not really cartography

## DESIGN REQUIREMENTS?

→ Look outside

## USEFULNESS?

→ Changes to the status quo

## AUTHORING OPTIONS?

→ Mood effects (lighting, rain, fog, ...)

*Beautiful, ray-traced  
Cityscape for Rotterdam,  
showing proposed new buildings  
with a setting sun and water reflections*

# Cartographic Scenes

For 3D cartographers...

...it's cartography

DESIGN REQUIREMENTS?

→ As rich / full as for 2D maps

USEFULNESS?

→ Powerful, eye-catching, immersive

AUTHORING OPTIONS?

→ Size, Shape, Offset, Textures, Text ...

# Types of 3D Worlds

## Global

Global Coordinate System (WGS84)  
Curvature of the earth  
'Global' context

## Local

Projected Coordinate Systems  
Fish tank area-of-interest  
'Relative' context

# Beware, 3D can be evil...

Perspective distortion = **lying**

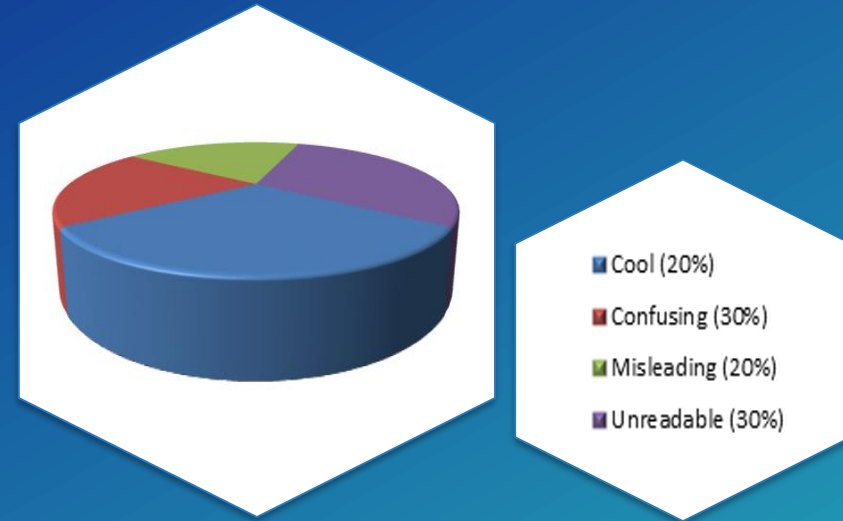

Content can be hidden = **lying**

Continuous scale = **symbols change across scales**

Easy to get disoriented = **annoying**

Large amounts data = **slow**

Hard to author = **scary**

- + Major Roads
- + Minor Roads
- + POI's
- + Building Footprints

SCALE

# 3D View: **Familiar Symbols**

Objects

Trees

Stylized shapes

Colours

Green is good

Use realistic elements

“Walls” as barriers

# 3D View: **Attribute-driven symbols**

Change symbols based feature information

Size

Color

Transparency

Rotation

...

*Street light coverage*

Video removed

*Wind vectors through a proposed development*

# 3D View: **Super Powers**

Fly around

Use X-ray vision

Expose invisible things

Go underground

See using radar

Video removed

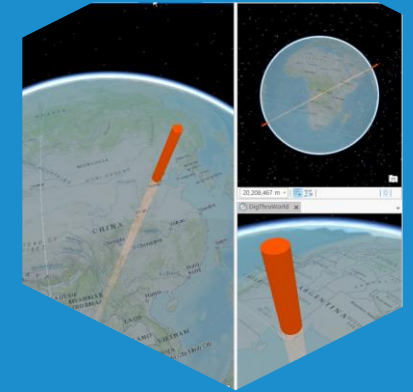

# EXAMPLES

(Presented and explained)

- JFK Crime Scene
- Minard's Map 3D
- Typhoon Nabi
- Isometric Prisms
- Water Usage (Space-Time Cube)
- 3D Cartograms
- Views of Mt Fuji
- 3D Fun with Lego
- Dig to China
- Exaggerated Mars
- Partisan Hilltops
- Extruded people
- Historical Ship Race
- Shape Shifting

# Checklist for authoring better 3D scenes

- **Message** – what should the viewer see / learn?
- **Delivery** – pictures, videos, interactive scenes?
  - Occlusion, measurements, before/after, ...
- **3D canvas type** – global, or local?
  - Is an Axonometric / Isometric representation required?
- **Symbology** – realistic, thematic, augmented reality?
  - Size, Shape, Color, Textures, Transparency, ...
- **Mood** – Scene properties, such as shadows, lighting, haze
  - Gotham versus Pasadena
- **Guide users** – bookmarks, labels, popups, fly-throughs, voice-overs, ...
- **Be creative** – the z-axis does not have to be only for 'z' or 'time'

## 3D Guidelines (review at your leisure)

- **Use dictates structure** - Promotional maps require less structure. Thematics require more structure
- **Impact** - 3D can be powerful, eye-catching and immersive. Use to support attention-grabbing needs
- **Content** - Simplification and Generalisation have never been more important. Clean. Simple. Functional
- **Texture** - Avoid flat colours...add textures
- **Natural realistic not photorealistic**
- **Symbols** - Mimetic symbols support easier recognition
- **Typography** - Still important but don't overload. Rotate with scene if possible but not to be overbearing
- **Projection** - Use axonometric where possible to maintain scale particularly for analytical map functions

## 3D Guidelines (review at your leisure)

- Sky and haze – avoid sky but include haze which aids depth cue perception
- Space-Time Cubes - Good for linear data, OK for point, poor for area...try not to overload or stack (beware of 'inner holes')
- Z value does not have to depict height or time, use it to show 'what's important'
- Scene control - Avoids occlusions by supporting multiple views but avoid too much rotation
- Bookmarks - supports easy camera reposition, highlight key view points
- Interaction - Allow data to be recovered, overcomes measurement limits
- Narration - Guides and improves interpretation

# One more thing

Actually...a few more things

# Cartography.

## The book (Nov 2017)

# Other sessions

How maps work (KF/WJ)

Tue 15:15 | Thu 13:30

Amazing and Inspiring maps (KF/JN)

Tue 08:30 | Wed 10:15

Thematic map design (KF/JN)

Tue 13:30 | Fri 09:00

3D in ArcGIS Pro (CA/NS/SH)

Wed 08:30 |

3D Cartographic Techniques (NS/KF)

Wed 13:30 | Thu 15:15

Map Design for relief representation (KF/JN)

Wed 08:30 | Thu 10:15

Designing Story Maps to Change Hearts & Minds (JN/JB)

Tue 10:15

Designing Esri's Vector Tile Basemaps (WJ/AS)

Tue 14:00 | Wed 12:00

Styling Vector Basemaps (WJ/AS)

Thu 10:15

esri
