

# Leveraging Esri's Managed Cloud Services to Help Your Organization

Alec Walker

# Session Description

Our contract together

Organizations are increasingly turning to the cloud to deliver capabilities and information more reliably and securely than they have in the past. Esri Managed Cloud Services is helping organizations leverage the benefits of the cloud to achieve their business strategy. Focusing on specific customer use cases, discover why, how, and what organizations are doing to accomplish their business goals and objectives through a managed cloud services approach.

# Session Description

Our contract together

Organizations are increasingly turning to the cloud to deliver capabilities and information more reliably and securely than they have in the past. Esri Managed Cloud Services is helping organizations leverage the benefits of the cloud to achieve their business strategy. Focusing on specific customer use cases, discover why, how, and what organizations are doing to accomplish their business goals and objectives through a managed cloud services approach.

# Key Takeaways

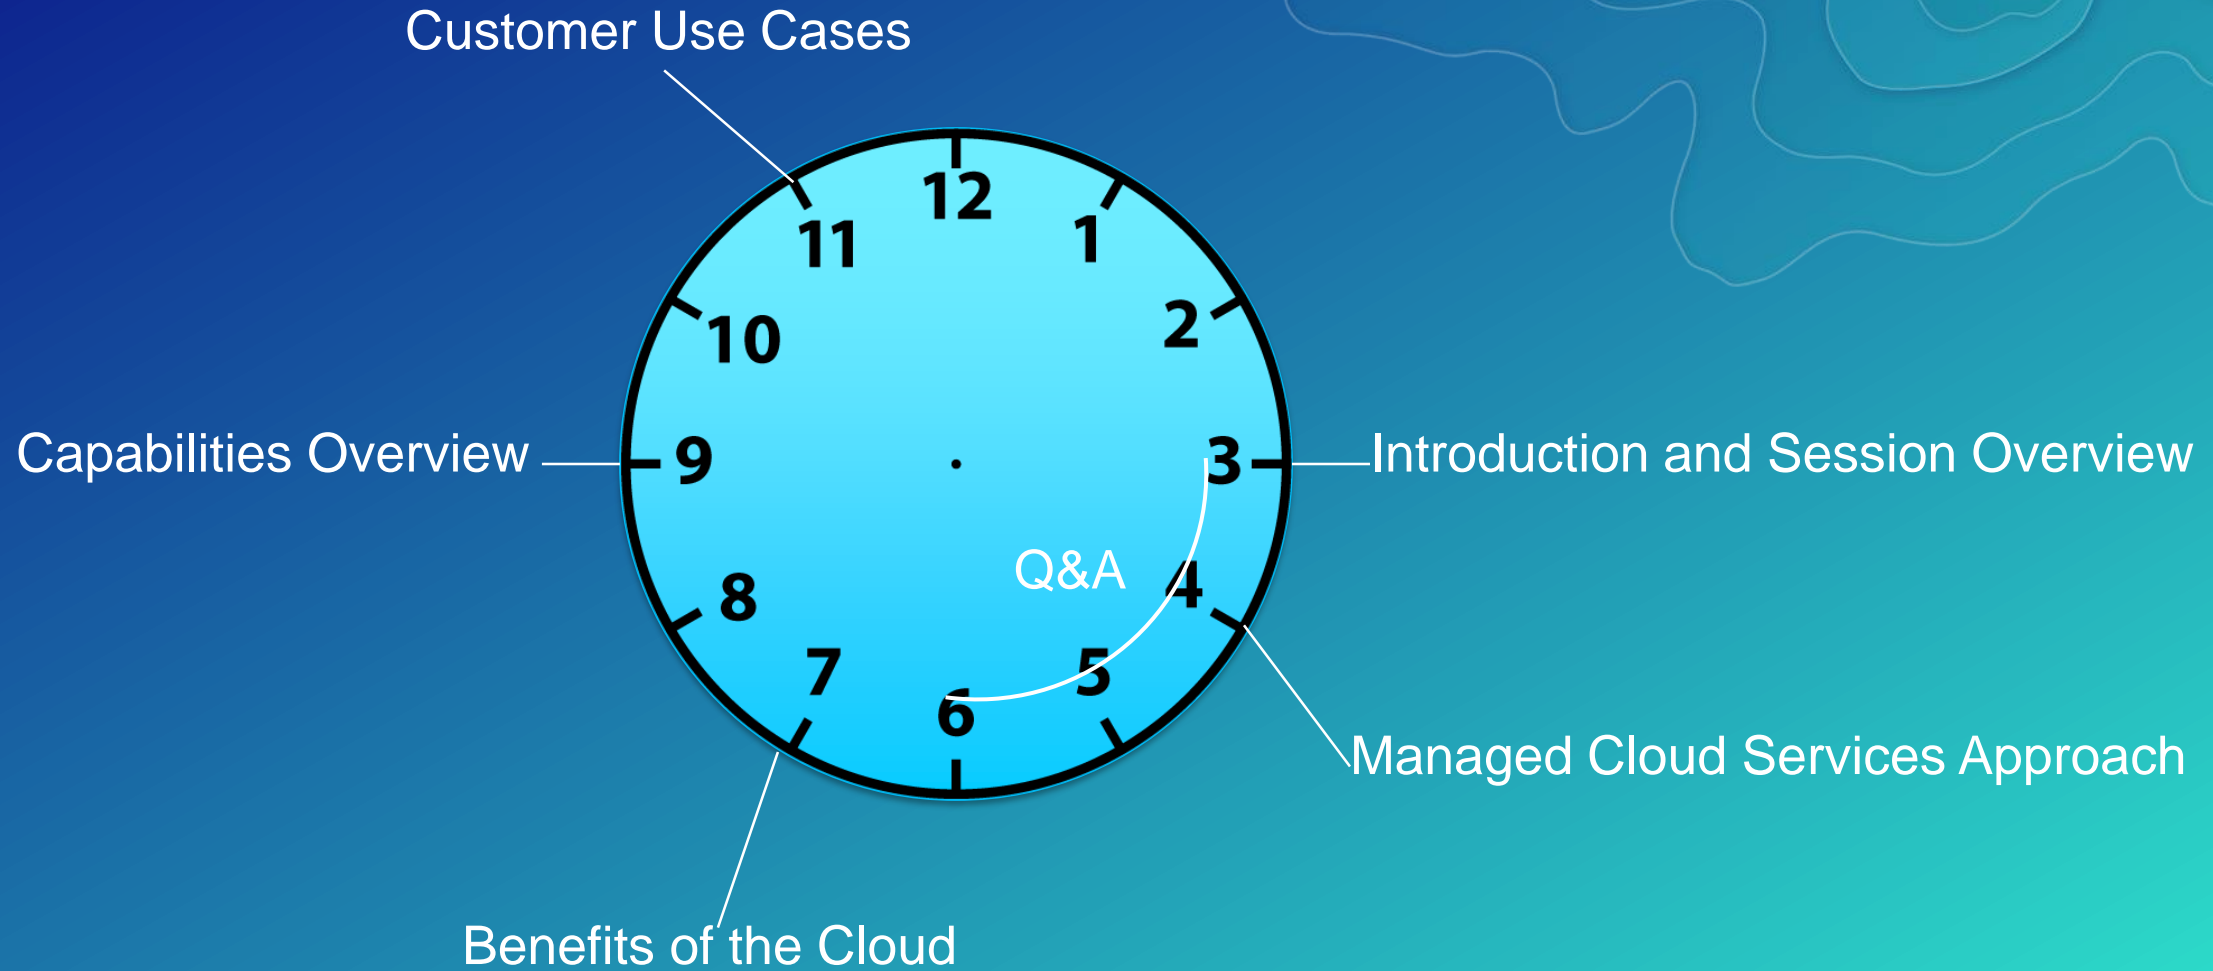

What are managed cloud services?

How might the cloud benefit my organization?

How is the cloud being used to deliver capabilities?

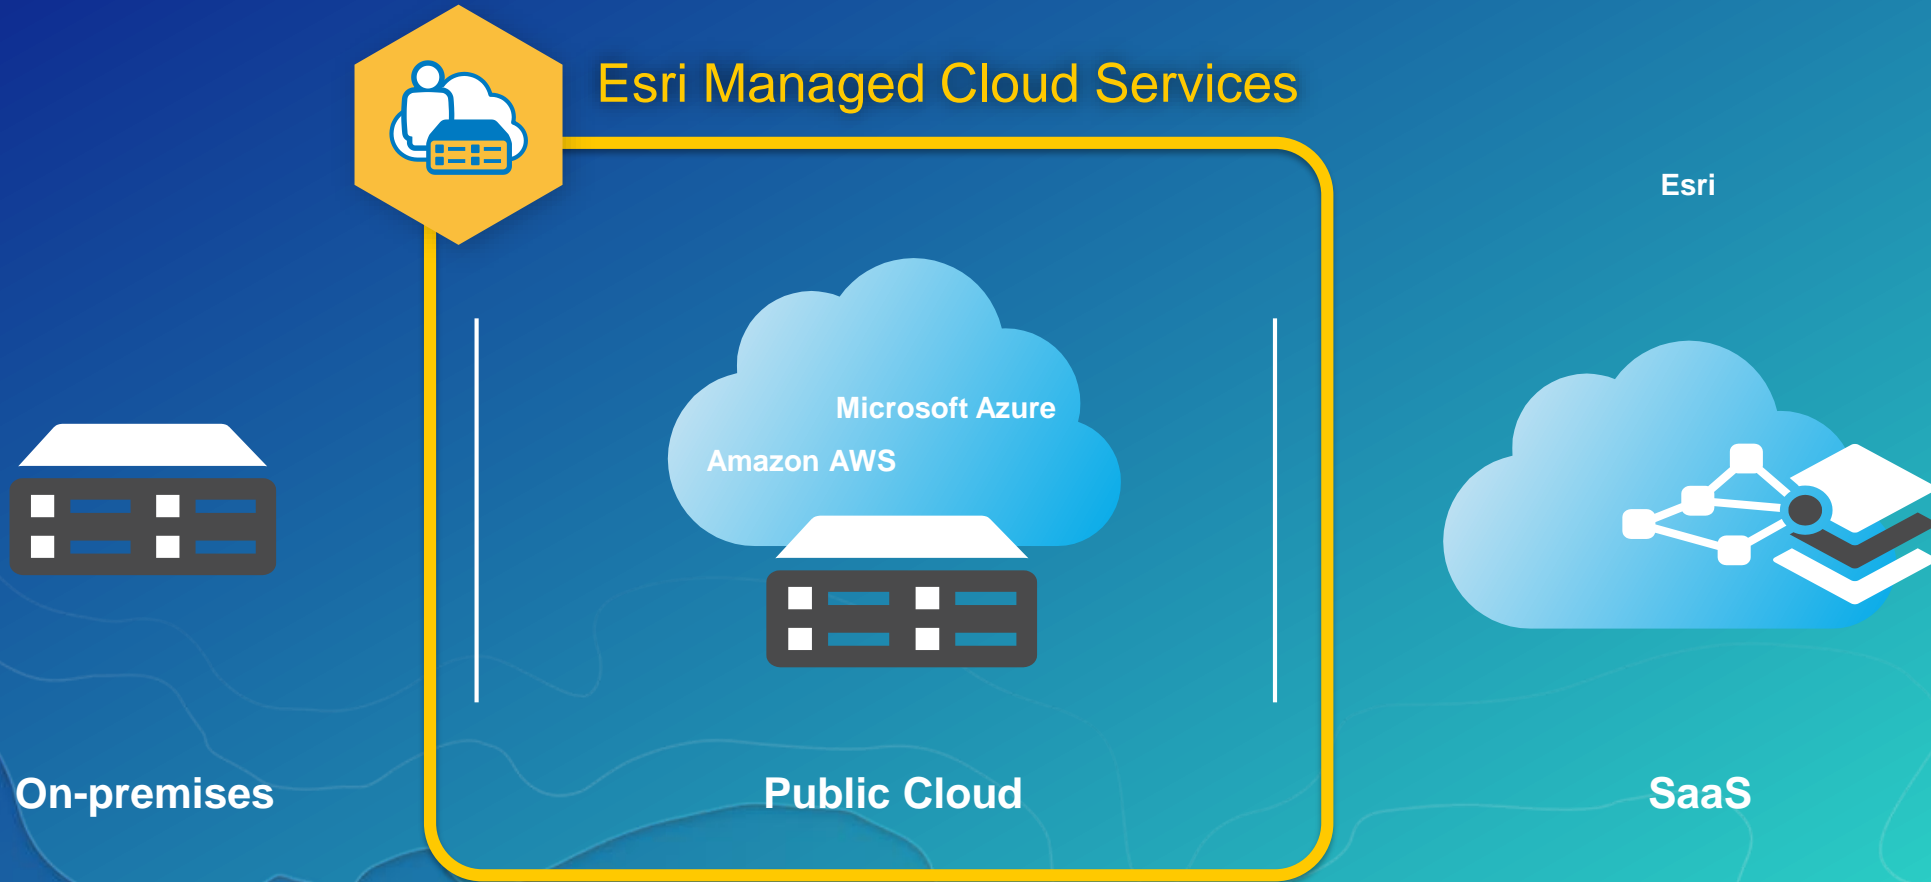

# Agenda

# Deployment Architectures

Deploy ArcGIS on-premises, in public clouds (PaaS), and/or use Esri's cloud (SaaS)

# What are Managed Services?

A look at industry offerings

“Managed Services is the proactive management of an IT (Information Technology) asset or object, by a third party typically known as a Managed Service Provider (MSP), on behalf of a customer. The operative distinction that sets apart a MSP is the proactive delivery of their service, as compared to reactive IT services, which have been around for decades.”

MSP Alliance

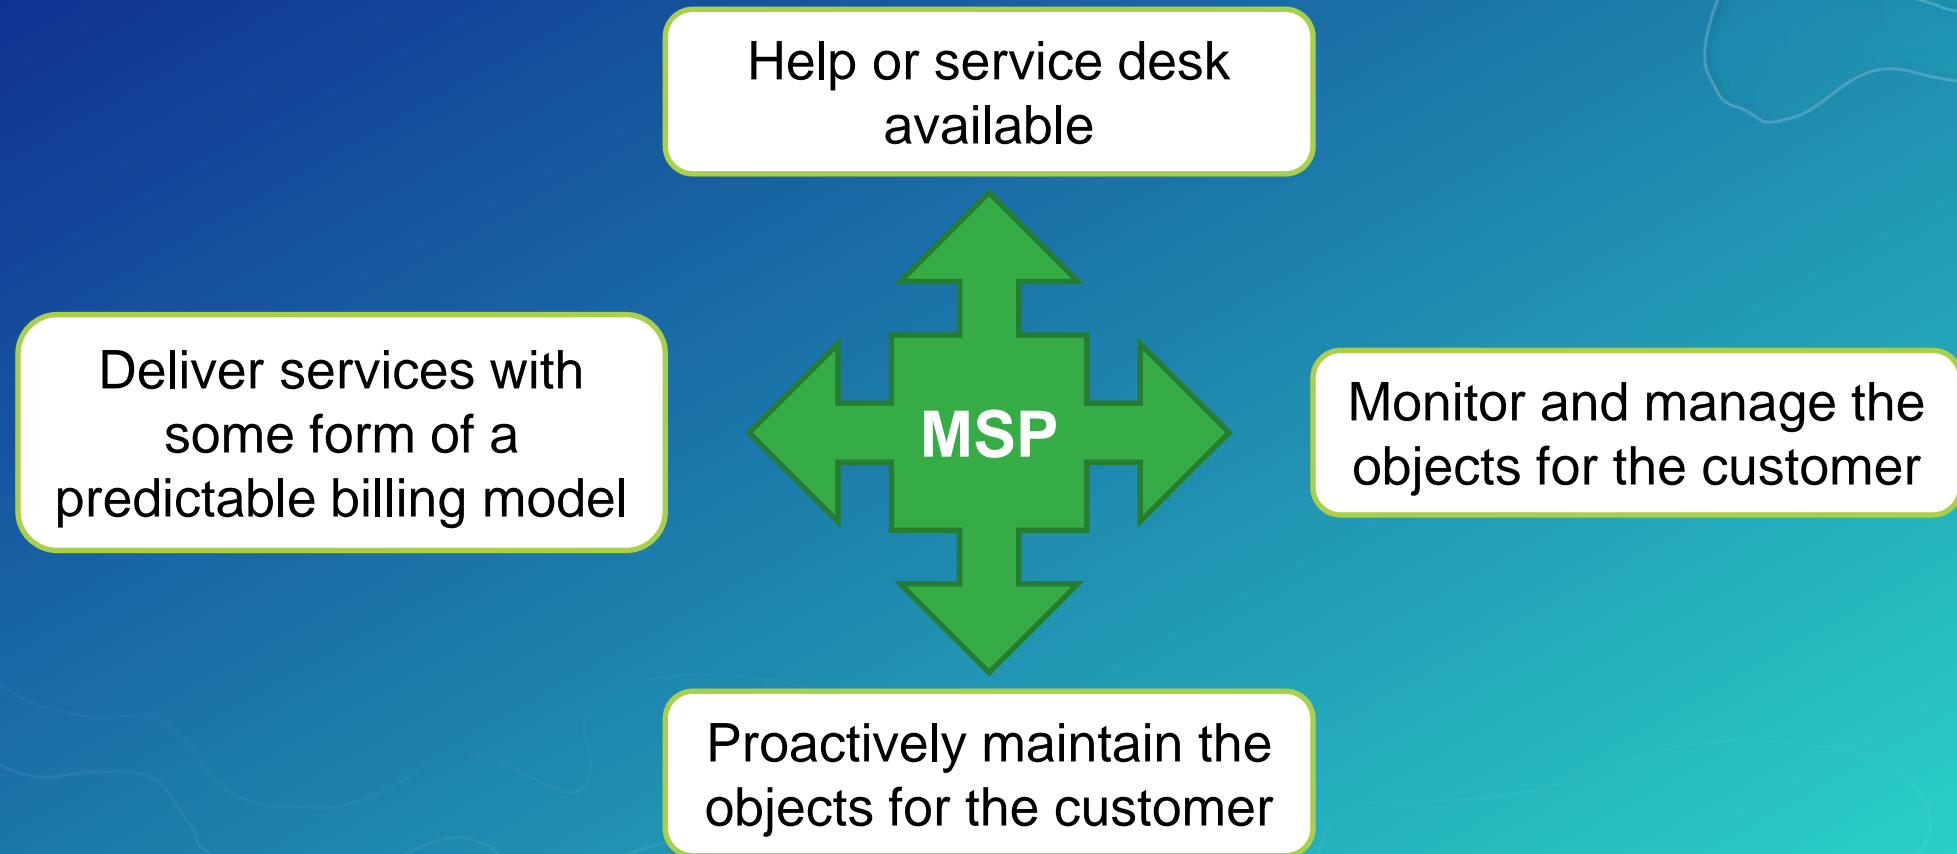

*International Association of Cloud and Managed Service Providers*

# Managed services cover a variety of IT services

- Managed computer support (help desk)
- Managed security
- Managed hosting
- Managed network services
- Managed print services
- Managed spam filtering
- Application managed services
- Payroll services
- Customer service
- Disaster/ Recovery
- Backup
- Managed storage
- Remote monitoring
- Network management (NOC)
- Private cloud
- Telco services/ Managed VoIP
- Patch management
- Colocation
- Mobile device management
- Vendor management
- Hardware as a service
- Software license management
- Warranty management

Regardless of the IT service, all Managed Service Providers (MSPs) share certain characteristics

How many present are using a  
managed service provider of some sort?

Answer = 50%

# What is the Cloud?

A quick definition

“We think the notion of cloud as a style of computing is **mainstream**. It’s **not a matter of if, it’s a matter of when** and how and where. And does this style of computing evolve on internal private systems you control, external public systems, or some combination that’s a hybrid. Regardless of how it comes down we think **everyone is really moving** towards that cloud-style of computing.”

David W. Cearly – Gartner Fellow, Gartner’s Top  
10 Strategic Technology Trends for 2015

# How has the market responded to the cloud?

Additionally 56% of organizations are still identifying IT operations that are candidates for cloud hosting

How many present are using a currently  
using the cloud?

Answer = 6/7

How many present are planning on shifting to the cloud in the next 12 months?

Answer = 33%

How many present are planning on growing their adoption of the cloud in the next 12 months?

Answer = 100%

# There are certain, essential characteristics of the cloud

## On-demand self-service

- Consumer can provision resources
- Provisioning happens automatically
- Does not require human interaction with service provider

## Broad network access

- Accessible over the network
- Available through thick or thin clients

## Resource pooling

- Computing resources pooled
- Service of multiple consumers (multi-tenant)
- Physical and virtual resources assigned dynamically
- Sense of location independence

## Rapid elasticity

- Capabilities scale inward and outward
- Can be automatically triggered
- Appear to have unlimited capacity
- Provisioning can happen at any time and in any quantity

## Measured service

- Systems are typically metered
- Resource usage can be monitored, controlled and reported
- Allows for optimization of resources

# At its core, cloud means providing IT capabilities as a service

*“A style of computing where scalable and elastic IT-related capabilities are provided ‘as a service’ to customers using internet technologies.”*  
– Gartner

## Cloud Service Types

Software as a Service  
(SaaS)

Platform as a Service  
(PaaS)

Infrastructure as a  
Service  
(IaaS)

## Cloud Service Models

Public Cloud

Internal Private  
Cloud

Hosted Private  
Cloud

Virtual Private  
Cloud

Hybrid Cloud

# An introduction to the cloud service types

**SaaS** Software applications running on a cloud infrastructure delivered to consumers via the web

---

**PaaS** Consumers are given the capability to build, test, and/or deploy created or acquired application using platform-specific languages, libraries, services, and tools supported by the provider

---

**IaaS** On-demand delivery of cloud computing infrastructure – servers, processing, storage, network, and OS

# Vendor vs. consumer cloud computing responsibilities

## SaaS

### Service provider does

- Updates code and manages releases
- Manages infrastructure transparently to consumers
- Delivers up-time SLA
- Usage tracking (typically # of users)

### Consumer does

- Designates users and associated roles
- Limited customizations to software
- NOT pick hosting location
- Pay based on usage

## PaaS

- Maintains and updates languages, libraries, services and tools for integration with platform
- Typically controls underlying cloud infrastructure (network, servers, OS, storage)

- Builds, tests, and deploys COMPATIBLE applications on the platform
- May configure some of the infrastructure settings, but not the infrastructure itself
- May or may not pick hosting location

## IaaS

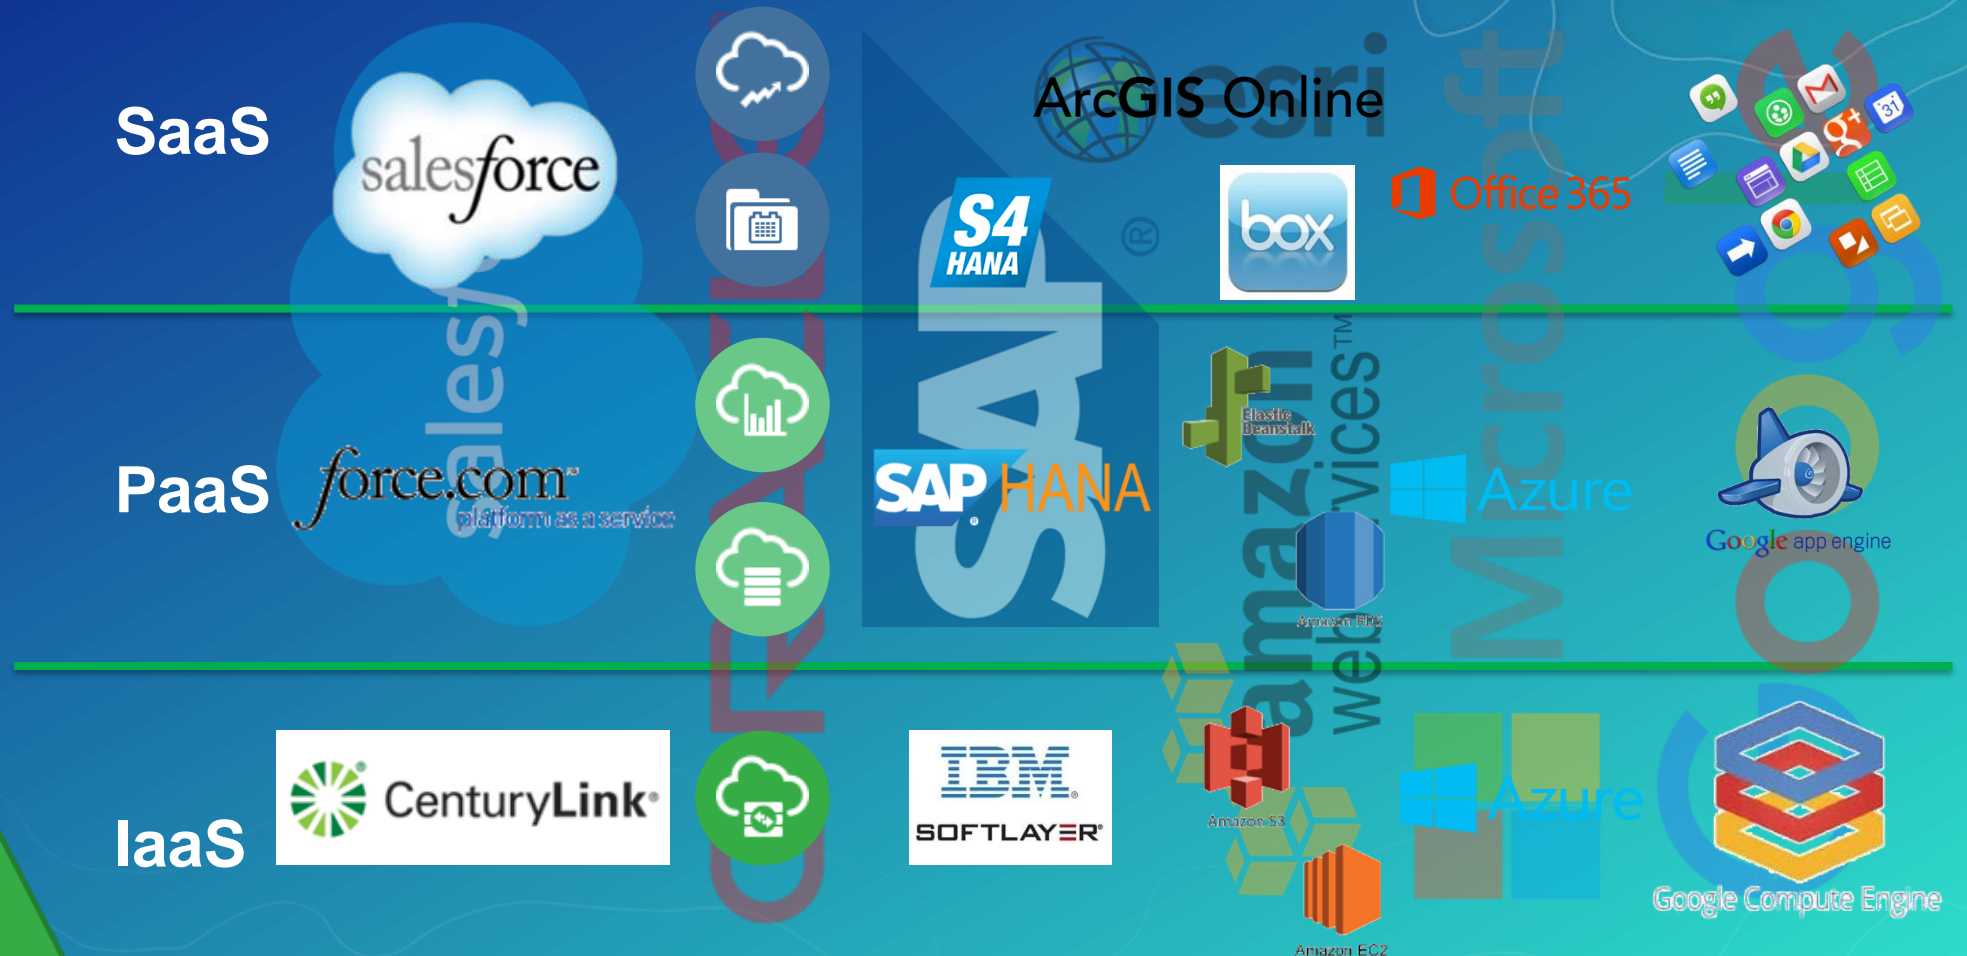

- Owns hardware associated with cloud
- Provides up-time SLAs associated with hardware and network connectivity
- Provides metered usage to consumers

- Decides the how much, what, and (sometimes) where of their environment
- Picks OS and ALL software deployed within their environment
- Pays for usage of hardware

# Vendors across the cloud landscape

# Vendors across the cloud landscape

# Managed Cloud Services

Cloud + Managed Services

“Managed [Cloud] Services is the proactive management of [cloud] assets or objects... on behalf of a customer.

Adapted from MSP Alliance

International Association of Cloud and Managed Service Providers

# Managed Cloud Services is...

## SaaS

### Managed Service Provider does

- Configures users and roles
- Customizes software on behalf of customer
- Implementation and delivery of initial operating capabilities
- Bills as project or by user

### Consumer does

- Designates users and associated roles
- Pays based on usage
- Uses the software

## PaaS

- Deploys applications on behalf of customers
- Configures & maintains infrastructure settings to optimize both platform & architecture
- Applies patches and updates to platform
- Bills as value added service based on consumption (by server or by user)

- Builds and tests applications on the platform
- Uses platform based applications
- Provides feedback to service provider

## IaaS

- Proactively manages customer's cloud environment, how much, what and where resources are best deployed
- Deploys software and applies patches and updates to environment
- Bills as value added service based on consumption (typically by server)

- Uses the infrastructure environment
- Deploys software on top of environment for usage

# Benefits of the Cloud

What are our customers hoping to get?

# The Benefits of the Cloud

Cost savings

Flexibility and scalability

Increased security

Shorten time to value

Shared accountability

Try before you buy

Access to innovation

# What benefits have you seen from the cloud?

Answers

Ability to support multiple geographies and  
reduce latency

Easier relative to on-premises (rely on others,  
“always there”)

# If the cloud provides so many benefits on its own, why are customers seeking out GIS-based Managed Cloud Services?

Driver	Yes/No	Comments/Notes
Looking for specific GIS capabilities	Y	
Looking for GIS-based industry capabilities / solution	Y	
Looking for increased performance & flexible infrastructure	Y	
Outsourcing IT/GIS operations: reduce expenses/costs	Y	
Outsourcing IT/GIS operations: lack skills / resources	Y	
Want to try ArcGIS technology before they buy	Y	
Want GIS capabilities sooner (than they could do in-house)	Y	
Other	Y	

# What our customers said...

Driver	Yes/No	Comments/Notes
<b>Looking for specific GIS capabilities</b>	Y	<b>Especially administrative capabilities</b>
Looking for GIS-based industry capabilities / solution	Y	Not across all industries
<b>Looking for increased performance &amp; flexible infrastructure</b>	Y	<b>Especially true in government</b>
Outsourcing IT/GIS operations: reduce expenses/costs	Y	Not primary driver
<b>Outsourcing IT/GIS operations: lack skills / resources</b>	Y	<b>True for smaller customers</b>
Want to try ArcGIS technology before they buy	Y	High conversion rate to larger opps
<b>Want GIS capabilities sooner (than they could do in-house)</b>	Y	<b>One of the primary drivers</b>
Other	Y	“Cloud first” initiatives

# How would you answer this question?

Driver	Yes/No	Count
Looking for specific GIS capabilities	Y	Stay more current with Enterprise
Looking for GIS-based industry capabilities / solution	Y	
Looking for increased performance & flexible infrastructure	Y	
Outsourcing IT/GIS operations: reduce expenses/costs	Y	
Outsourcing IT/GIS operations: lack skills / resources	Y	Spread thin hard to get time
Want to try ArcGIS technology before they buy	Y	
Want GIS capabilities sooner (than they could do in-house)	Y	
Other	Y	Trying to reduce redundancy across government by consolidating, considering cloud

# Capabilities

What are we delivering to our customers?

# Capabilities and Client Examples

- **Consulting Services – US Bureau of Land Management**
- **Content Hosting (Web Service) – State of Michigan**
- **Application Hosting – Avingrid**
- **Sandbox/Prototype – USDA Forest Service**
- **Business Continuity/Recovery – Cook County**
- **Outsourced GIS Operations – Fort Hill Natural Gas**
