# Why Forms?

- Almost every business uses forms. Why?
- Forms provide **structure**.
- Forms are part of a workflow/process.
- The alternative...
- ...free form.

# The Advantages of Paper

- Quick to complete
- Portable

# The Problem with Paper

- “Paper is not the enemy. Inefficient processes are.”
  - “Paper is just another technology that is available to the process designers. It has a place, but it isn’t the point.”
- Ray H. Killam

# Disadvantages of Paper

- Lost/Damaged
- Incomplete
- Transcribing: Time-intensive, Errors
- Expensive
- Not ecology friendly

# Advantages of Electronic Forms

- Enforce Data collection completeness
  - Paper: 80% Error Frequency
  - Electronic: Not possible
- Pre-filled
- More input options
- Cost (overall)
- Accuracy
  - Paper: 6.7% Error Frequency
  - Electronic: 2.8% Error Frequency
- Time to complete
- Skip logic

# Advantages of Electronic Forms

  - Paper: 6.7% Error Frequency
  - Electronic: 2.8% Error Frequency
- Time to complete
- Skip logic

# Why is Change hard?

- Friction

# Input Type: Text Fields

- Real meat of the inspection
- Allows the inspector to be descriptive

Pro Tip #1: Consider the length of the answer and the size of the input field.

Pro Tip #2: If you are expecting a number, email or phone number don't use a text field!

Pro Tip #3: Use bullet or numbered lists

# Input Type: Text Fields

If complaint or follow-up, describe reason:

Normal **B** *I* U ~~S~~ **≡** **≡** **≡** **A** 

The NPDES Coordinator must report the following non-compliant conditions to the RWQCB within 24 hours:

- Discharges of permitted storm and non-storm water that result in a serious violation or a serious threatened violation of the Permit
- Discharges of spills of petroleum products, hazardous waste or toxic chemicals
- Discharges due to failed/damaged BMP controls that result in a serious *violation* of the Permit

A discharge of any quantity is considered a serious violation of the Permit if the resulting adverse impact to the environment requires immediate action to stop the discharge and its impacts, or the discharge requires notification to protect human health and safety.

# Input Type: Single/Multi-Select

- **Not many options (1 to 5), show all at once**
  - Reduces the number of clicks
- **A lot of options (5 or more), show in dropdown**
  - Form is too long if you show all at once
- **Pro Tip #1: If the option is really long/wordy, you will want to show them all at once (doesn't fit well in a dropdown)**
- **Pro Tip #2: Keep your options short**
- **Pro Tip #3: Always consider include an "Other" option.**

# Input Type: Single/Multi-Select

# Input Type: Repeating Field/Section

- Easy way to complete a table
- Simplifies Input
- Simplifies Report
- Perfect for when you don't know how many you are going to complete

**Pro Tip: Consider Using repeating sections when you have multiple items to enter**

## Input Type: Repeating Field/Section

## FOOD ESTABLISHMENT INSPECTION REPORT

Unless otherwise stated, violations cited in this report shall be corrected within a period not to exceed 10 calendar days for Critical items (§8-405.11) or 90 days for Non Critical items (§8-406.11).

### Code Reference

Violation Description/Remarks/Corrections
<p>1. The first violation is related to the lack of proper documentation for the initial assessment. The assessor should have provided a detailed description of the observed conditions and the potential hazards identified.</p> <p>2. The second violation is related to the failure to implement proper control measures. The assessor should have identified the root cause of the problem and implemented appropriate corrective actions to prevent recurrence.</p> <p>3. The third violation is related to the lack of communication and coordination between the assessor and the responsible personnel. The assessor should have clearly communicated the findings and recommendations to the relevant staff and ensured their understanding and commitment to the required actions.</p>

# Input Type: Numbers and Calculations

- You are guaranteed to get a number
- Calculations are consistent and correct

Pro Tip #1: Include the units for the number.

Pro Tip #2: Include look-up values. User just provides the quantity and the total volume and the form can provide the rest.

# Pre-Populate Fields

- Saves time
- Provide focus for inspector (“You make the observation, UtiliSync will do the rest”)
- Provides consistent results

**Pro Tip: Provide ability to pre-populate from multiple sources (GIS attributes, users data, organization data, current date/time, previous forms)**

# Skip Logic

- Only show the information that applies
- Can dramatically reduce the amount of time required to complete a form

# Required Fields

- **Guaranteed to have the information you need on every form**
- **Pro Tip: Required fields are often over used. Only use on field you *really* need to have.**

# Salt Lake County Case Study

- Salt Lake County paid a \$280,000 fine for stormwater violations.
- “We had been complying, but we hadn’t been documenting everything we were doing, so there was no proof of what we had been doing.” – Russ Wall, PW Director

## The Salt Lake Tribune

### Salt Lake County to pay \$280k to resolve water-pollution violations

By **EMMA PENROD** | The Salt Lake Tribune

First Published Jan 02 2016 10:48AM

After years of failing to meet runoff from reaching streams be paid to the state of Utah state and federal expectations and rivers, but inspections directly; the other half will go to for storm water pollution conducted by the state in 2007 the EPA

# Salt Lake County Case Study

- Our process is 2 to 4 times faster. No more paper. It is all completed electronically in the field.
- We are confident a record of every inspection is being distributed to the appropriate parties and archived for audit purposes.
- The work satisfaction of our inspectors has increased. They see this as an investment in making their job easier.
